Several levels of obtaining both area and yield estimates of corn and soybeans in Iowa were considered county, refined strata, refined/split strata, crop reporting district, and state Using the CCEA model form and smoothed weather data, regression coefficients at each level were derived to compute yield and its variance Variances were also computed with stratum level The variance of the yield estimates was largest at the state and smallest at the county level for both crops The refined strata had somewhat larger variances than those associated with the refined/split strata and CRD For production estimates, the difference in standard deviations among levels was not large for corn, but for soybeans the standard deviation at the state level was more than 50% greater than for the other levels The refined strata had the smallest standard deviations The county level was not considered in evaluation of production estimates due to lack of county area variances A R H

The crop calendars produced for the Large Area Crop Inventory

Experiment (LACIE) and crop calendar samples for Colorado, Iowa, Kansas, Minnesota, Montana, Nebraska, North Dakota, South Dakota, and Texas are presented. These calendars are based on weekly crop reporting district level observations of the percentage of various crops at several growth stages. A sample of the statistical treatments of the weekly data is provided. Four to five years of 50-percent dates for stages on a crop reporting district level for Arkansas, Iowa, Kentucky, Louisiana, Michigan, Mississippi, Ohio and Wisconsin are also given. M.G.

02

ENVIRONMENTAL CHANGES AND CULTURAL RESOURCES

Includes land use analysis, urban and metropolitan studies, environmental impact, air and water pollution, geographic information systems, and geographic analysis.

A82-19177 **Satellite observed cloud patterns associated with excessive precipitation outbreaks.** J. D. Clark, A. J. Lindner, R. Borneman, and R. E. Bell (NOAA, National Environmental Satellite Service, Camp Springs, MD). In: Conference on Weather Forecasting and Analysis, 8th, Denver, CO, June 10-13, 1980, Preprints. Boston, MA, American Meteorological Society, 1980, p. 463-473. 12 refs.

A description is provided of three convective system types in terms of cloud patterns, structure, and life cycle. If these systems move slowly, they are capable of producing excessive precipitation. Other convective occurrences also produce excessive precipitation, but are not as strongly associated with upper level cloud patterns which are easily identifiable in infrared satellite imagery. Each of the three convective types discussed has particular rain producing characteristics which are relevant to the forecasting of excessive precipitation. Synoptic type I systems tend to occur in the summer and early fall. Type II systems are most commonly observed in the spring and fall. Type III systems are generally observed over the eastern two thirds of the nation, but may be found in other areas as well. G.R.

A82-19179 **Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis.** A. R. Thomas (NOAA, National Meteorological Center, Washington, DC) and J. Kerlin (USAF, Offutt AFB, NE). In: Conference on Weather Forecasting and Analysis, 8th, Denver, CO, June 10-13, 1980, Preprints. Boston, MA, American Meteorological Society, 1980, p. 488-495. 6 refs.

The goals and applications of World Weather Watch (WWW) quality control procedures for meteorological data collection and recording are explored. The total systems concept possesses provisions for monitoring and quality control in telecommunication of data and data storage at meteorological centers. Radiosonde, rocketsonde, aircraft, and weather balloon observations are mentioned as part of the exponentially growing sources of mesoscale, synoptic, and asynoptic data where errors can occur in instruments, readings, corrections, signal processing, coding, and transmission. Checking procedures to maintain quality are outlined, and real-time and non-real-time data control are described, noting that the bulletins arrive from international sources. Future applications are indicated to concentrate on ecology, world food production, defense, energy use, and basic comfort and safety, in a climate of growing fiscal constraints. M.S.K.

A82-19826 † **Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4 (Tsvetovye kharakteristiki pokrovov zemli po rezul'tatam spektrometrirovaniia s orbital'noi nauchnoi stantsii 'Saliut-4').** L. I. Kiselevskii, B. I. Beliaev, A. A. Kovalev, and V. E. Pliuta (Akademiia Nauk Belorusskoi SSR, Institut Fiziki, Minsk, Belorussian SSR). *Akademiia Nauk BSSR, Doklady,* vol. 26, no. 1, 1982, p. 21-24. 11 refs. In Russian.

Salyut-4 spectroscopy data were used to determine color characteristics for various types of underlying surfaces, including desert, vegetation, and water. The quantitative relationship of these color characteristics and Mancell's color-perception system is investigated, and the influence of the porthole on the colors of the underlying surfaces is analyzed. B.J.

A82-20226 **The use of the airborne lidar system 'ALEX F 1' for aerosol tracing in the lower troposphere.** P. Mörl, M. E. Reinhardt, W. Renger, and R. Schellhase (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Physik der Atmosphare, Oberpfaffenhofen, West Germany). *Beiträge zur Physik der Atmosphäre,* vol. 54, no. 4, 1981, p. 403-410. 9 refs. Research supported by the Bundesministerium fur Forschung und Technologie.

The characteristics and performance of the airborne lidar system ALEX F 1 are described, noting its potential applications on spacecraft. The laser is fixed to a downward looking telescope, which gathers backscattered light for detection by a silicon photodiode, which begins the IR and photomultiplier count. A sample rate of 100 MHz on one channel corresponds to a 1.5 m resolution, with the data recorded on magnetic tape. The strength of the lidar signal is related to a color scale, with different values of the backscatter coefficient yielding different color tones. Examples are provided for the mesoscale measurement of the aerosol in the [illegible] Valley, for the regional scale by imaging the Rhine Valley at a scale of 50 km, and a 5 km small scale aerosol from a point source. The use of multiwavelength laser systems for detecting invisible clouds which mask the results of remote sensing methods is indicated. M.S.K.

A82-20339 † **Landscape mapping and physical-geographical classification of the eastern part of the Chechen-Ingush, ASSR using space imagery (Landshaftnoe kartografirovanie i fizikogeograficheskoe raionirovanie vostochnoi chasti Checheno-Ingushskoi ASSR po kosmicheskim snimkam).** Iu. I. Kondratova and A. E. Fedina (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Issledovanie Zemli iz Kosmosa,* Nov.-Dec. 1981, p. 13-18. In Russian.

A82-20999 **Airborne in-situ measurement of particulate sulfur and sulfuric acid with flame photometry and thermal analysis.** W. G. Cobourn, J. Djukic-Husar, R. B. Husar, and S. Kohli (Washington University, St. Louis, MO). *(U.S. Environmental Protection Agency, Electric Power Research Institute, and U.S. National Park Service, Symposium on Plumes and Visibility: Measurements and Model Components, Grand Canyon, AZ, Nov. 10-14, 1980.)* *Atmospheric Environment,* vol. 15, no. 12, 1981, p. 2565-2571. 17 refs. U.S. Environmental Protection Agency Grant No. R-806606-02.

An airborne in-situ particulate sulfur monitor based on the FPD principle is developed and tested. The lower detection limit for particulate sulfur is [illegible] ppb (4 micrograms SO4 per cu m), with a time response to 90% of signal at 5 s. FPD zero drift caused by changes in pressure, humidity and other environmental factors is compensated for by including an automatic zeroing cycle so that the zero signal can be monitored with the sulfur signal. An accuracy of + or - 30% is attained, and an examination of field data indicates that plume profiles of particulate sulfur and sulfuric acid can be measured with good detail with vertical profiles of good quality. D.L.G.

A82-21217 **Ionospheric troughs in Antarctica.** J. R. Dudeney, M. J. Jarvis, R. I. Kressman, M. Pinnock, A. S. Rodger, and K. H. Wright (British Antarctic Survey, Cambridge, England). *Nature,* vol. 295, Jan. 28, 1982, p. 307, 308. 22 refs.

The first observations of the dynamics of both the mid-latitude and high-latitude troughs made by the Advanced Ionospheric Sounder (AIS) at Halley Station, Antarctica (76 deg S, 27 deg W; invariant lat. 61 deg) are reported. This experiment is part of a major international project to study the sub-auroral ionosphere and its associations with the magnetosphere. The analysis provides an accurate quantitative description of the latitudinal movements of these features and the first results delineating the orientation of the poleward edge of the mid-latitude trough. These results show that the AIS has a much greater potential for monitoring large scale ionospheric structures and for tracking their motions than more conventional radio wave experiments. (Author)

A82-21386 **Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size.** E. E. Uthe, B. M. Morley, and N. B. Nielsen (SRI International Atmospheric Science Center, Menlo Park, CA). *Applied Optics,* vol. 21, Feb. 1, 1982, p. 460-463. 12 refs. Research supported by SRI International.

Observations were made of a dense smoke plume downwind from a forest fire using the ALPHA-1 two-wavelength downward-looking airborne lidar system. Facsimile displays were derived which depict plume dimensions, boundary layer height, and underlying terrain elevations. Results show significantly greater plume attenuation at 0.53-micron wavelengths than at 1.06-micron wavelengths, which indicates about 0.1-micron mean particle diameters, or the presence of gaseous constituents that absorb the visible radiation. D.L.G.

A82-21432 Measurement of atmospheric emission using a balloon-borne cryogenic Fourier spectrometer. H. Sakai, T. C. Li (Massachusetts, University, Amherst, MA), J. Pritchard (Idealab, Inc., Franklin, MA), F. J. Murcray, F. H. Murcray, J. Williams (Denver, University, Denver, CO), and G. Vanasse (USAF, Geophysics Laboratory, Bedford, MA). In: International Conference on Fourier Transform Infrared Spectroscopy, Columbia, SC, June 8-12, 1981, Proceedings. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1981, p. 196-198. AF Project 2310, AF Task 2310G1.

In the lower atmosphere, the tropopause, and the stratosphere, the infrared emission radiance level directly relates to temperature and concentration of the molecules responsible for the emission. An experiment was conducted to obtain high precision data on altitude profiles of various atmospheric parameters by measuring the infrared emission spectrum of the atmosphere from a balloon-borne platform. The balloon flight took place on October 8, 1980. A spectrum was recovered from interferogram data taken at an altitude of approximately 5000 m. The maximum optical path difference was approximately 4 cm, producing a corresponding resolution of 0.12 per cm. The data indicate excellent sensitivity for detecting weak spectral lines. G.R.

A82-22143 A comparison between aerial photography and Landsat for computer land-cover mapping. B. K. Quirk and F. L. Scarpace (Wisconsin, University, Madison, WI). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 235-240. 18 refs. NOAA-sponsored research.

In a number of applications, Landsat imagery resolution was found to be inadequate to meet mapping needs. An analysis of aerial photographs has, therefore, been considered to obtain required land-cover information. The considered investigation attempts to evaluate the potential of such an analysis on the basis of a comparison made between land-cover information provided from several sensors for an urbanizing area around Green Bay, Wisconsin. Land-cover information is important as an input to hydrologic models. Land-cover estimates from the computer analysis of Landsat and digitized aerial photography are compared to manual photointerpretations of black-and-white infrared and color infrared aerial photographs of the area within the watershed. It was found that computer analysis of a color infrared photograph provided more accurate land-cover estimates than Landsat when compared to a manual photointerpretation of an urban watershed. G.R.

A82-24958 A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs. J. Fuhrer, K. H. Erismann, H. J. Keller, and A. Favre (Bern, Universitat, Berne, Switzerland). *Remote Sensing of Environment,* vol. 11, Mar. 1981, p. 1-8. 22 refs. Swiss National Science Foundation Grant No. 3,209,77.

Aerial color-infrared photographs of two Swiss cities (Bern and Lausanne) were taken to evaluate the potential use of automatic image analysis for the discrimination of urban tree species and their different vitalities. A TV-based hardware system under full software control measured five different functions at each of the 63 possible intensity levels at red (600 nm), green (550 nm), blue (470 nm), and white illumination. Eighty-three parameters per tree were derived from the corresponding intensity distributions describing tone and texture. Classification by supervised learning was carried out using stepwise discriminant analysis. The overall classification error for the discrimination of four deciduous tree species (horse chestnut, Norway maple, large-leaved lime, and London plane) was 4.9%. A higher error rate (6.2%) was found for the discrimination of five classes, namely healthy trees of the above mentioned four species and damaged horse chestnut trees. The practicability of the proposed system is discussed. (Author)

A82-24962 The Canadian north - Utility of remote sensing for environmental monitoring. B. Dey (Howard University, Washington, DC) and J. H. Richards (Saskatchewan, University, Saskatoon, Canada). *Remote Sensing of Environment,* vol. 11, Mar. 1981, p. 57-72. 31 refs.

Activities related to resource exploration have a great potential for causing environmental change and damage. In connection with a growing interest in northern mineral resources, environmental monitoring of the Canadian north has become important. Monitoring is undertaken so as to distinguish and record dynamic events such as weather, floods, forest fires, and ice break-up, as well as longer-term changes which may affect water quality, vegetation, and wildlife habitat. An investigation concerning the feasibility of remote sensing for environmental monitoring is conducted. It is found that the use of aircraft in remote sensing is becoming increasingly expensive, while the aircraft platform itself may be considered inadequate. In distinction, small-scale satellite imagery is relatively inexpensive, and the regularity and areal extent of satellite coverage is not in doubt. Inherent potentials will be more nearly realized with the aid of new techniques and satellites. G.R.

A82-25140 Building and road extraction from aerial photographs. M. Tavakoli (Shiraz University, Shiraz, Iran) and A. Rosenfeld (Maryland, University, College Park, MD). *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-12, Jan.-Feb. 1982, p. 84-91. 10 refs. Grant No. DAAG53-76-C-0138. DARPA Order 3206.

A method of extracting features such as buildings and roads from high-resolution aerial photographs is described. The approach involves several successive stages of grouping of edge segments. Straight line segments are fitted to sets of edge pixels; compatibilities between pairs of these segments, based on gray level and geometric information, are computed; and the segments are then grouped into building-like and road-like groupings based on these compatibilities. Examples of the results obtained using this approach are given, and some variations on the initial stages of the process are also investigated. (Author)

A82-25149 Mid-latitude summertime measurements of stratospheric NO2. J. B. Kerr, C. T. McElroy, and W. F. J. Evans (Department of the Environment, Atmospheric Environment Service, Downsview, Ontario, Canada). *Canadian Journal of Physics,* vol. 60, Feb. 1982, p. 196-200. 11 refs.

Measurements of the vertical distribution of stratospheric nitrogen dioxide made on Stratoprobe balloon flights in August from Yorkton, Saskatchewan are presented. The vertical profiles were calculated by the inversion of measurements of absorption at wavelengths of 437.7, 444.8 and 450.0 nm as a function of solar zenith angle during sunrise and sunset. Four pairs of observations were obtained which show variations in NO2 levels with 15% at all heights, demonstrating the reliability of the measurement and analysis methods. The average NO2 concentration at sunset is found to increase from about 0.3 ppbv at 10 km to 10 ppbv at 35 km, and at sunrise to increase from 0.2 to 5 ppbv. A.L.W.

A82-25452 * Analysis of two Seasat synthetic aperture radar images of an urban scene. M. L. Bryan (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Mar. 1982, p. 393-398. 19 refs. Contract No. NAS7-100.

Because the Seasat satellite is not polar-orbiting, the look-directions of its SAR radar on the basic ascending and descending orbits were neither in the same direction, orthogonal to, nor opposite to, one another. This calls for a technique by means of which to identify those features within a given geographic region which were imaged from two directions by Seasat SAR and are sensitive to radar orientation. It is demonstrated that images from the two orbits with different look directions can be registered and subtracted from one another, with the resulting difference image highlighting those features that are direction-sensitive. Although this depends on a precise registration the subtraction technique is straightforward once such registration has been obtained. O.C.

A82-26329 An investigation of the ozone plume from a small city. C. W. Spicer, D. W. Joseph, and P. R. Sticksel (Battelle Columbus Laboratories, Columbus, OH). *Air Pollution Control*

Association, Journal, vol. 32, Mar. 1982, p. 278-281. 6 refs. U.S. Environmental Protection Agency Contract No. 68-02-2439.

The results of upwind and downwind flights around a large and small city (population less than 100,000) to determine if the small city contributed to downwind O3 pollution are reported. The flights were around St. Louis, MO and Springfield, IL on summer days. A small increase was noted downwind from Springfield, along with O3 precursors. Significant differences were observed on one occasion, and were found to correspond with atmospheric conditions conducive to photochemical formation of O3. M.S.K.

A82-26403 **A regional air quality model for the Kwinana industrial area of Western Australia.** F. H. Kamst and T. J. Lyons (Murdoch University, Murdoch, Australia). *Atmospheric Environment,* vol. 16, no. 3, 1982, p. 401-412. 30 refs.

The Kwinana industrial area lies 32 km south of the city of Perth, Western Australia. Since this area represents the major concentration of heavy industry near Perth, it is essential to have a clear understanding of its present and future impact on the regional air quality. A description is presented of the development of a regional air dispersion model wherein the initial development has been limited to the stable atmosphere. The model was used to predict SO2 concentrations in the Kwinana area during the night of August 1-2, 1978, between 2300 and 0445 h. The obtained results are presented in graphs. Attention is given to a sensitivity analysis, the determination of the input parameters to the model and a comparison of model results with photographs. G.R.

A82-26621 * # **The NASA participation in the 1980 EPA PEPE/NEROS field measurements program.** E. Remsberg and R. Bendura (NASA, Langley Research Center, Hampton, VA). *American Meteorological Society, Joint Conference on Applications of Air Pollution Meteorology, 3rd, San Antonio, TX, Jan. 11-15, 1982, Paper.* 4 p.

The Persistent Elevated Pollution Episode (PEPE)/Northeast Regional Oxidant Study (NEROS) Project consisted of a series of field measurements sponsored by the EPA during July and August, 1980. NASA participation in the Project had several purposes: (1) use remote sensing to help determine mixed layer height and ozone profiles regionally; and (2) provide opportunity for development, testing and evaluation of several NASA 'emerging' airborne remote sensing systems. NASA also provided information on the hazy pollution episodes throughout the summer of 1980 with satellite imagery. This paper describes findings on atmospheric aerosols, ozone profile and ozone column and discusses the instruments (airborne and ground-based sensors) and techniques used to obtain the relevant data. Associated archived data is also discussed. C.D.

A82-26700 **Diurnal variation of summer convection over West Africa and the Tropical Eastern Atlantic during 1974 and 1978.** R. J. Reed and K. D. Jaffe (Washington, University, Seattle, WA). *Monthly Weather Review,* vol. 109, Dec. 1981, p. 2527-2534. 12 refs. NOAA-supported research; NSF Grant No. ATM-81-03697.

The behavior of convection during the Greater Atlantic Tropical Experiment period is compared with data from the summer of 1978, the initial operation summer of Meteosat-1. IR imagery from Meteosat-1 taken at 4-hr intervals from July 1-Sept. 30 covered 3 deg squares. The GATE data was for 1974, and similarities between the two years included explosive convective processes over land in the afternoon over elevated terrain, a weak or absent diurnal cycle near Dakar, a noontime maximum in the south of the region offshore, a peak near midnight SE of Dakar, and weak diurnal variations in some ocean regions. The existence of a large diurnal cycle in an eastern Atlantic region downstream from a land area with a large diurnal variation indicated a possible connection between land and oceanic convection. M.S.K.

A82-26721 **Photogrammetry from aircraft side camera movies - Winter MONEX.** C. Warner (Virginia, University, Charlottesville, VA). *Journal of Applied Meteorology,* vol. 20, Dec. 1981, p. 1516-1526. 14 refs. NSF Grants No. ATM-79-00233; No. ATM-80-12214.

Side-looking cloud movie photogrammetry during the MONEX winter flights over the South China Sea in 1979 is described. The films were made along the line of flight parallel to the cloud movement at heights ascertained from meteorological stations. Theoretical underpinnings to the method of calculation of cloud height using the technique are provided. Examples are given for photogrammetry of fractus, humilis, mediocris, congestus, and cumulonimbus clouds, along with height and width measurements. A method is outlined for measuring the cloud density in a field by use of a cardboard cutout against a projection of the recorded images, and density measurements are noted to have a factor of 2 uncertainty. M.S.K.

A82-26844 **Humidity measurement by infrared thermometry.** S. B. Idso (U.S. Water Conservation Laboratory, Phoenix, AZ). *Remote Sensing of Environment,* vol. 12, Mar. 1982, p. 87-91. 12 refs.

A promising new approach to the remote sensing of plant water stress involves the evaluation of an index that is dependent upon air temperature and vapor pressure, in addition to the basic foliage temperature. The air temperature measurement is already being made by an appropriate sensor incorporated into some infrared thermometers; but the vapor pressure measurement has required a second instrument. This paper describes a technique for obtaining the vapor pressure measurement by viewing the cloudless sky directly overhead with the infrared thermometer itself, thus doing away with the need for a second instrument in the remote field assessment of plant water stress by infrared thermometry. (Author)

A82-26980 * **Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data.** R. D. Cess (National Center for Atmospheric Research, Boulder, CO; New York, State University, Stony Brook, NY), B. P. Briegleb (National Center for Atmospheric Research, Boulder, CO), and M. S. Lian (New York, State University, Stony Brook, NY). *Journal of the Atmospheric Sciences,* vol. 39, Jan. 1982, p. 53-59. 19 refs. NSF Grant No. CME-79-09065; Contract No. NAS1-16444.

Three studies of the relative albedo to the IR components of cloud amount feedback are reviewed, and an approach to the seasonal variability in low-level cloud numbers is presented. Comparisons are made and uncertainties calculated for the predictions of cloud amounts from satellite data sets for outgoing IR flux. IR data is used directly for a linear regression analysis and seasonal and latitudinal variations are considered in terms of monthly-annual means for particular latitude zones. Investigations of NOAA-NESS satellite data revealed that cirrus clouds are transparent in the 10.5-12.5 microns range and cloud albedos decrease at wavelengths greater than 0.7 micron, which suggests a possibility of cloud-sky and clear-sky albedo comparisons at 0.5-0.7 micron. The inclusion of Rayleigh scattering and atmospheric water vapor absorption of sunlight is recommended to test the effects on observed contracts. M.S.K.

A82-27040 # **Detection of natural disasters via Meteosat.** A. Robson, J. Morgan (ESA, European Space Operations Centre, Darmstadt, West Germany), R. W. Herschy (Department of the Environment, Water Data Unit, Reading, England), and J. Zschau (Kiel, Neue Universität, Kiel, West Germany). *ESA Bulletin,* no. 29, Feb. 1982, p. 10-18.

The operations, characteristics, and data distribution capabilities of the Meteosat 1 and 2 spacecraft which, due to separate system malfunctions, perform the mission capabilities of one satellite, are described. The GEO-situated satellites generate images in the visible and with two channels in the IR, at 11 and 6 microns. Sightings are made of hurricanes, cyclones, extratropical depressions, droughts, and floods, with whole-earth images being produced every 30 min. Raw images are received at the European Space Operations Center in Darmstadt, processed, and then sent back through the satellite to a dozen digital and over 200 analog user stations. Data Collection Platforms on board the spacecraft broadcast collected images at scheduled time intervals, when interrogated, or during an alert status when immediate information is required. Further applications to detect storm surges and earthquake activity are outlined. M.S.K.

A82-27627 # **Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared**

measurements. J. L. Farah (Universidad Nacional Autónoma de México, Mexico City, Mexico). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 663-670. 10 refs.

Attention is given to a model of the earth's surface temperature which is fully based on work reported by Jaeger (1953), extensions of this work, and applications to remote-sensing problems in geology. The present investigation has the objective to perform a mathematical analysis of linearizations of these models. The basic equations are considered along with a model for g, questions of model linearization, direct and inverse relationships, and practical numerical considerations. The use of the linear model in producing maps of thermal inertia and/or of geothermal flux as viewed in the investigation, appears to yield a powerful tool for applications, mainly because at least in the case of the three-flight problem, one can take full advantage of the Fast-Fourier-Transform algorithms and of only three one-dimensional tables. G.R.

A82-27650 # **Detection of volcanic ash fall area from Landsat MSS CCT data - Eruption of Mt. Ontake in 1979.** S. Kishi and S. Yazaki (National Research Center for Disaster Prevention, Sakura, Ibaraki, Japan). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 919-928. 7 refs.

Results are presented from a digital analysis study, conducted to detect the volcanic ash fall area from the October 1979 eruption of Mt. Ontake in Japan, using Landsat MSS imagery taken a few days before and after the event. The value difference of Bands 4 and 7 was found to be the most useful in detecting the ash fall area, which was covered by a layer more than 1 mm thick. O.C.

A82-27657 # **Detailed land use classification based on multitemporal Landsat-MSS-data.** J. Lichtenegger (Zürich, Universität, Zurich, Switzerland) and K. Seidel (Zürich, Eidgenössische Technische Hochschule, Zurich, Switzerland). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 997-1005. 6 refs. Research supported by the Swiss National Science Foundation.

Use of the 'time dimension' is shown to improve the classification result in contrast to single frame analyses. Several Landsat multispectral scanner frames are registered by means of cross correlation and then superimposed on each other to form a multitemporal data set. These data are analyzed for detailed land use categories by a supervised classification algorithm. An example for the enhancement of the classification accuracy with a quantitative ground truth comparison is given. Finally data compression is performed by principal components analysis as a preprocessing procedure prior to conventional visual interpretation. A color representation of the main components demonstrates up to seven clearly distinguishable land use categories. (Author)

Markham (NASA, Goddard Space Flight Center, Earth Survey Applications Div., Greenbelt, MD) and J. R. G. Townshend (NASA, Goddard Space Flight Center, Earth Survey Applications Div., Greenbelt, MD; Reading, University, Reading, Berks., England). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1075-1090. 12 refs.

The benefits obtained from sensor systems for monitoring earth resources will depend on the application and interpretation methods used. A frequently used analysis method is supervised per-pixel multispectral classification with a typical application being land cover classification. An investigation is conducted to evaluate the effect of spatial resolution on the ability to classify land cover types with per-pixel digital image classification techniques. Attention is also given to the documentation of changes in scene noise and the percentage of boundary pixels as a function of spatial resolution, in order to improve the understanding of the interrelationship between classification accuracy and spatial resolution. It is found that scene noise varies considerably between land cover categories. Changes in scene noise with coarsening resolution occur at different rates for different categories. G.R.

A82-27670 # **Phenomena modelling of remotely sensed data by image rationing.** J. Iisaka (IBM Japan, Ltd., Tokyo, Japan), N. Yoshimura, Y. Yasuda, and Y. Emori (Chiba University, Chiba, Japan). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1127-1140.

Phenomena modelling represents a useful approach to extract objective information from remotely sensed data in cases in which the resolution size is larger than the object. The concept of phenomena modelling has been applied to soil mapping, taking into account an elimination of the vegetation factor by an image rationing procedure. The considered study is concerned with an attempt to utilize phenomena modelling for an interpretation of information regarding the metropolitan area of Tokyo. Attention is given to problems regarding the detection of roughness features in the metropolitan area, aspects of modelling for the estimation of building height, the conduction of an experiment, a two-feature model for building height estimation, and a three-feature model for the building height estimation. Roller (Michigan, Environmental Research Institute, Ann Arbor, MI). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1425-1434. Research supported by the Food and Agriculture Organization.

A study was conducted with the objective to determine whether a net gain or loss of land occurred along the coastline of Bangladesh between 1972 and 1979. The information provided by the study is to furnish a basis for a prediction regarding the new land which will be formed in the future. It is hoped, that based on this quantitative assessment, it may be possible to define steps to accelerate the process of land formation and to stabilize any gains. Questions of methodology are examined, taking into account aspects of preprocessing, problems of categorization, questions of registration, change detection, and the output products. G.R.

A82-27701 # **Utilisation of remote sensing in resources identification and land use in India - An integrated approach.** R. K. Katti, M. G. Sardar, T. V. Pavate, and P. Venkatachalam (Indian Institute of Technology, Bombay, India). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1487-1497.

In this paper, remotely sensed data from Landsat-I in the form of imagery, computer compatible tape (CCT) outputs, aerial photographs and topographic maps are used for forestry and terrain evaluation in geotechnical engineering appraisal. The study shows that it is possible to develop an integrated classification system encompassing forest resources evaluation and terrain evaluation for engineering uses in particular, and agriculture development and geological aspects in general. Thus the integrated approach helps in reducing repetitiveness of sampling on the one hand, and on the other facilitates the development of thematic maps in a more rational way. The approach concerns an understanding of the physical and chemical properties of deposits, and their relation to the surface features observed in remotely sensed data in the form of CCT digital output and imagery. Genetic and morphological factors are taken into account in the analysis. (Author)

A82-27704 # **Remote SO2 emission measurements with correlation spectrometers from volcanoes.** L. Daubner, J. Davies, M. Millan (Barringer Research, Ltd., Toronto, Canada), and R. Stoiber (Dartmouth College, Hanover, NH). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1519-1526. 17 refs.

The way in which correlation spectrometers can be used in monitoring emissions of SO2 from volcanoes as an indicator of volcanic activity is described. It is shown that volcanic gas geochemistry can provide indications of increasing magmatic contributions to eruption. Mass flows of SO2 at Mount Etna are found to correlate well with a model of magma movement within the conduit system proposed by Wadge (1977). A table giving the specifications of a correlation spectrometer is included. C.R.

Model studies of the potential of laser absorption-computed tomography are presented which demonstrate the possibility of sensitive remote atmospheric pollutant measurements, over kilometer-sized areas, with two-dimensional resolution, at modest laser source powers. An analysis of this tomographic reconstruction process as a function of measurement SNR, laser power, range, and system geometry, shows that the system is able to yield two-dimensional maps of pollutant concentrations at ranges and resolutions superior to those attainable with existing, direct-detection laser radars. O.C.

A82-28295 * # **Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD.** D. Atlas and O. W. Thiele (NASA, Goddard Space Flight Center, Laboratory for Atmospheric Sciences, Greenbelt, MD). *American Meteorological Society, Bulletin,* vol. 63, Jan. 1982, p. 59-63. 6 refs.

The goals and methods for global precipitation measurements from space are examined. Records currently exist only for visible and IR scans of cloud properties, and are applied from GEO for detecting diurnal variations in precipitation. Microwave radiometry is noted to be a suitable method for supplementing the visible and IR data for measuring stratiform oceanic precipitation, and when used at up to 3 microns can detect areas, if not amounts, of precipitation from GEO. Applications of radar altimeters are proposed in terms of modifications to the Seasat-type 2.2 cm radar, the use of surface target attentuation radar, of frequency agile rain radar, or of adaptive pointing radar. Soil moisture sensing is available with passive microwave radiometry in the 20-50 cm bands, or active sensing in the 5-8 cm bands. The utilization of GARP ground truth data is explored, along with statistical methods for treating the data samples. M.S.K.

REMOTE SENSING DATA APPLIED TO LAND-USE SURVEY AT THE PARAIBA VALLEY

Nelson deJesusParada, Principal Investigator, Magda Adelaide Lombardo, Evlyn Marcia Leao DeMoraesNovo, Madalena Niero, and Celina Foresti May 1981 10 p refs Presented at the 7th Intern. Symp. on Machine Process. of Remotely Sensed Data, West Lafayette, Ind., 23-26 Jun. 1981 Sponsored by NASA ERTS

(E82-10025; NASA-CR-164812; INPE-2081-RPE/315) Avail: NTIS HC A02/MF A01 CSCL 08B

The Paraiba Valley (state of Sao Paulo) was selected as the test site in a study to develop a methodology for land-use survey and to determine the land-use modification rates using data of LANDSAT system. Both visual and automatic interpretation methods were employed to analyze seven land-use classes. They are: urban area, industrial area, bare soil, cultivated area, pastureland, reforestation and natural vegetation. By means of visual interpretation little spectral differences among those classes were observed. The automatic classification of LANDSAT MSS data using maximum likelihood algorithm shows a 39% average error of omission and a 3.4% error of commission for the seven classes. The classification results were under the influences of the complexity of land-uses in the study area, the large spectral variations of analyzed classes and the low resolution of LANDSAT data. DEMONSTRATION OF A LONG-RANGE ATMOSPHERIC TRACER SYSTEM USING PERFLUOROCARBONS

Gilbert J. Ferber, Kosta Telegadas, Jerome L. Heffter, C. Ray Dickson, Russell N. Dietz, and Philip W. Krey Apr. 1981 84 p refs

(Contract DE-AI01-80EV-10081)

(PB82-106246; NOAA-TM-ERL-ARL-101; NOAA-81080301) Avail: NTIS HC A05/MF A01 CSCL 13B

Regional-scale tracer experiments are needed to validate atmospheric dispersion aspects of air pollution models. The capability of a new system, using perfluorocarbon tracers (PFTs), for long-range dispersion experiments at reasonable cost was demonstrated in two experiments. Two PFTs (C7F14 and C8F16) were released simultaneously with SF6 and two heavy methanes. The PFT system provides automatic sequential samplers and rapid, inexpensive analyses down to 2 parts per 10 to the + 15th power of air. PFT concentrations were measured 600 km away, up to three days after release. Performance of the PFT system was excellent and a consistent set of tracer data was obtained. GRA

CHARACTERIZING USER REQUIREMENTS FOR FUTURE LAND OBSERVING SATELLITES

J. L. Barker, P. J. Cressy, C. C. Schnetzler, and V. V. Salomonson Dec. 1981 56 p refs

(NASA-TM-83867) Avail: NTIS HC A04/MF A01 CSCL 05B

The objective procedure was developed for identifying probable sensor and mission characteristics for an operational satellite land observing system. Requirements were systematically compiled, quantified and scored by type of use, from surveys of federal, state, local and private communities. Incremental percent increases in expected value of data were estimated for critical system improvements. Comparisons with costs permitted selection of a probable sensor system, from a set of 11 options, with the following characteristics: 30 meter spatial resolution in 5 bands and 15 meters in 1 band, spectral bands nominally at Thematic Mapper (TM) bands 1 through 6 positions, and 2 day data turn around for receipt of imagery. Improvements are suggested for both the form of questions and the procedures for analysis of future surveys in order to provide a more quantitatively precise definition of sensor and mission requirements. CLIMATE OBSERVING SYSTEM STUDIES: AN ELEMENT OF THE NASA CLIMATE RESEARCH PROGRAM: WORKSHOP REPORT
Sep. 1980 154 p refs
(NASA-TM-84040) Avail: NTIS HC A08/MF A01 CSCL 04B

Plans for NASA's efforts in climatology were discussed. Targets for a comprehensive observing system for the early 1990's were considered. A program to provide useful data in the near and mid-term, and a program to provide for a feasibility assessment of instruments and methods for the development of a long-term system were discussed. Climate parameters that cannot be measured from space were identified. Long-term calibration, intercomparison, standards, and ground truth were discussed.

GENERAL CONFIGURATION AND INTERNAL DISPOSITION OF EQUIPMENT IN A SATELLITE FOR COLLECTING ENVIRONMENTAL DATA
Carlos deOliveira Lino and Aydano Barreto Carleial Oct. 1981 32 p refs In PORTUGUESE; ENGLISH summary Presented at 33d Ann. Meeting of SBPC, Salvador, 81-5 Jul. 1981
(INPE-2240-PRE/026) Avail: NTIS HC A03/MF A01

The general configuration of an experimental satellite for reception and retransmission to the Earth of environmental data is described. The data originates from small automatic Earth stations equipped with sensors and capable of operating in remote locations. The interrelationships among the equipment blocks constituting the satellite and between these and the outside medium, which were used in the search for an adequate disposition for the equipment blocks are presented. The proposed internal and external disposition for the blocks is presented in drawings. Some mechanical quantities (position of the center of mass, moments of inertia) resulting from the mass distribution inherent to the chosen configuration, are calculated.

RESOURCEFUL DECISIONS: LANDSAT IN MICHIGAN
Todd Anuskiewicz, Principal Investigator and Roy Meador [1982] 29 p Sponsored by NASA Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 ERTS
(E82-10037; NASA-CR-164771) Avail: SOD HC CSCL 05B

The capabilities of LANDSAT and the continuous advantages the satellite offers in remote sensing are reviewed. The processing and application of data from the satellite to the study of resource and environmental needs in Michigan highlighted include: land use; classification of trophic states in lakes and the monitoring of water quality; prospecting for oil, gas, minerals, and water; identifying wetlands, wildlife habitats, and recreation areas; forest management; routing power lines; transportation planning; and surveying the Great Lakes Basin. The work of the Environmental Research Institute of Michigan in solving modern sensor technological problems and in gathering ground truth is reported as well as activities available through the University of Michigan remote sensing program.

The synoptic view and the repetitive acquisition of LANDSAT imagery provide precise information, in real-time, for monitoring preserved areas based on spectral, temporal and spatial properties. The purpose of this study was to monitor, with the use of multispectral imagery, the systematic annual burning, which causes the degradation of ecosystems in the National Park of Araguaia. LANDSAT imagery of channel 5 (0.6 a 0.7 microns) and 7 (0.8 a 1.1 microns), at the scale of 1:250,000, were used to identify and delimit vegetation units and burned area, based on photointerpretation parameter of tonality. The results show that the gallery forest can be discriminated from the seasonally flooded 'campo cerrado', and that 4.14% of the study area was burned. Conclusions point out that the LANDSAT images can be used for the implementation of environmental protection in national parks.

HEAT CAPACITY MAPPING MISSION (HCMM): INTERPRETATION OF IMAGERY OVER CANADA Final Report
Josef Cihlar, Principal Investigator and R. G. Dixon Aug. 1981 72 p refs Sponsored by NASA Original contains imagery. Original imagery may be purchased from NASA Goddard Space Flight Center, (code 601), Greenbelt, Md. 20771. Domestic users send order to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn. World Data Center A for Rockets and Satellites'. HCMM 1
(E82-10070; NASA-CR-165092; NAS 1.26:165092) Avail: NTIS HC A04/MF A01 CSCL 05B

Visual analysis of HCMM images acquired over two sites in Canada and supporting aircraft and ground data obtained at a smaller subsite in Alberta show that nighttime surface temperature distribution is primarily related to the near-surface air temperature; the effects of topography, wind, and land cover were low or indirect through air temperature. Surface cover and large altitudinal differences were important parameters influencing daytime apparent temperature values. A quantitative analysis of the relationship between the antecedent precipitation index and the satellite thermal IR measurements did not yield statistically significant correlation coefficients, but the correlations had a definite temporal trend which could be related to the increasing uniformity of vegetation cover. The large pixel size (resulting in a mixture of cover types and soil/canopy temperatures measured by the satellite) and high cloud cover frequency found in images covering both Canadian sites and northern U.S. were considered the main deficiencies of the thermal satellite data.

A SATELLITE FROST FORECASTING SYSTEM FOR FLORIDA Final Report
J. David Martsolf *In its* Appl. of Satellite Frost Forecast Technol. to Other Parts of the U.S., Phase 2 Nov. 1981 42 p refs Presented at the Workshop on Appl. of Weather Data to Agr. and Forest Prod., Anaheim, Calif., 30-31 Mar. 1981; sponsored by American Meteorological Soc. and NSF
Avail: NTIS HC A12/MF A01 CSCL 04B

Since the first of two minicomputers that are the main components of the satellite frost forecast system was delivered in 1977, the system has evolved appreciably. A geostationary operational environmental satellite (GEOS) system provides the satellite data. The freeze of January 12-14, 1981, was documented with increasing interest in potential of such systems. Satellite data is now acquired digitally rather than by redigitizing the GOES-Tap transmissions. Data acquisition is now automated, i.e., the computers are programmed to operate the system with little, if any, operator intervention.

A STUDY OF MODEL PARAMETERS ASSOCIATED WITH THE URBAN CLIMATE USING HCMM DATA Quarterly

Progress Report
Nov. 1981 5 p HCMM
(Contract NAS5-26442)
(E82-10140; NASA-CR-168525; NAS 1.26:168525) Avail: NTIS HC A02/MF A01 CSCL 13B

The use of infrared and visible data from the Heat Capacity Mapping Mission (HCMM) and in situ data to study the intensity of the urban heat island of Saint Louis is described. Analysis of HCMM data shows that an urban heat island exists day and night in all seasons when clear skies prevail. The lower albedo value of the urban region during the day suggests that the higher temperatures are due to more absorption of solar radiation. Preliminary analysis of in situ meteorological data was performed after merging with HCMM data, and surface roughness, the exchange coefficient, and the soil moisture were calculated. J.D.

Infrared and visible data from the Heat Capacity Mapping Mission (HCMM) satellite were used to study the intensity of the urban heat island, commonly defined as the temperature difference between the center of the city and the surrounding suburban and rural regions, as a function of changes in the season and changes in meteorological conditions in order to derive various parameters which may be used in numerical models for urban climate. The analysis was focused on the city of St. Louis; and in situ data from St. Louis was combined with HCMM data in order to derive the various parameters. The HCMM data were mapped onto a Mercator projection map of the city and ground temperatures were established using data corrected for the effects of atmospheric absorption. The corrected and uncorrected HCMM data were compared to determine the magnitude of the error induced by atmospheric effects. M.G.

A STUDY OF MODEL PARAMETERS ASSOCIATED WITH THE URBAN CLIMATE USING HCMM DATA Quarterly Progress Report
Apr. 1981 7 p HCMM
(Contract NAS5-26442)
(E82-10160; NASA-CR-168543; NAS 1.26:168543) Avail: NTIS HC A02/MF A01 CSCL 13B

Progress in the study of the intensity of the urban heat island is reported. The intensity of the heat island is commonly defined as the temperature difference between the center of the city and the surrounding suburban and rural regions. The intensity is considered as a function of changes in the season and changes in meteorological conditions in order to derive various parameters which may be used in numerical models for urban climate. Twelve case studies were selected and CCT's were ordered. In situ data was obtained from sixteen stations scattered about the city of St. Louis. Upper-air meteorological data were obtained and the water vapor and the temperature data were processed. Atmospheric transmissivities were computed for each of the case studies. T.M.

A research summary is presented and is divided into two major areas, one developmental and the other basic science. In the first three sub-categories are discussed: image processing techniques, especially the method whereby surface temperature image are converted to images of surface energy budget, moisture availability and thermal inertia; model development; and model verification. Basic science includes the use of a method to further the understanding of the urban heat island and anthropogenic modification of the surface heating, evaporation over vegetated surfaces, and the effect of surface heat flux on plume spread. GEODESY AND CARTOGRAPHY

Includes mapping and topography.

A82-20340 † **Reconstruction of a present-day landscape map of a central part of Italy using space images (Obnovlenie karty sovremennykh landshaftov tsentral'noi chasti Italii po kosmicheskim snimkam).** E. V. Glushko, E. P. Romanova, and K. N. Sukhanova (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Issledovanie Zemli iz Kosmosa,* Nov.-Dec. 1981, p. 19-26. 7 refs In Russian.

The possibility of reconstructing a landscape map on the basis of space images is demonstrated by the example of a landscape map of a portion of central Italy at a scale of 1:2,000,000. Multispectral scanner data were obtained on October 3, 1980 by the Meteor-satellite Fragment system in the 0.7-0.8 and 0.8-1.1 micron spectral bands for an area of 17,600 sq km. The images were used to produce a map scheme for interpreting the landscapes; this map is also compared with a natural-resources map of the same territory. B.J.

A82-20407 **Mapping in tropical forests - A new approach using the laser APR.** H. Arp, J. C. Griesbach (TRANARG CA, Caracas, Venezuela), and J. P. Burns. *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 91-100. 7 refs.

Novel techniques involving the Laser Airborne Profile Recorder (Laser APR) have been developed as a solution to the problem of topographic mapping in dense tropical forests. The narrow laser beam used is able not only to record profiles of the tree canopy, but penetrate through small openings to ground level. Tree heights are then determined by comparing recorded profiles. The system is applied to the mapping of the Rio Caura reservoir site in southern Venezuela, where topographic maps showing 5-10 m contours of the 800 sq km area were completed in five months by means of Laser APR flights at 1.5 km intervals. A special, three-channel Autotape, mounted on a helicopter, was used in photogrammetric control location by trilateration from ground stations to the hovering aircraft. Many Laser APR-derived elevations were identified on the existing, 1:50,000-scale photography used for the mapping. O.C.

A82-21036 **Application and experimental verification of an empirical backscattering cross section model for the earth's surface.** W. Keydel (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Hochfrequenztechnik, Oberpfaffenhofen, West Germany). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 67-71.

The spectral power density of ground clutter for a radar moving horizontally over the ground is calculated and the results are compared with measured values. An empirical model for the backscattering per unit area is employed to generate values for scattering cross sections from a sea surface. The predictions are found to agree well with 60% grazing angle measurements of the Baltic Sea. The analysis is concluded to hold for incoherent scattering, thereby extending the model's effectiveness into the statistical area. M.S.K.

A82-21037 **On randomly absorbing and scattering surface layers.** E. Schanda (Bern, Universität, Berne, Switzerland). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 72-76. 7 refs.

Radar wave scattering from a natural surface modelled as a heterogeneous layer of finite thickness consisting of randomly distributed concentrations and dilutions within a background dielectric is studied. The illumination of the modelled surface with a coherent plane wave yields a coherent and diffuse backscatter, and the dimensions of the fluctuations of the complex index of refraction is described by a delta correlation in the direction perpendicular to the mean surface and by a finitely extended correlation in the plane of the mean surface. A continuous distribution of random absorption and phase irregularities is formulated and consideration is given to albedo and emissivity. The replacement of the planar nature of the model with more realistic phase and absorption distributions, including the background medium and the natural parameters of the surface layer is indicated. M.S.K.

A82-21038 **A radar signature model for partially coherent scattering from irregular surfaces.** E. P. W. Attema, P. J. Van Kats, and L. Krul (Delft, Technische Hogeschool, Delft, Netherlands). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 76-84. 9 refs.

An electromagnetic scattering model for radar surface sensing is presented which accounts for spatial correlation beyond the contour of the illuminated area. Specifically, targets whose sizes of irregularities and radii of curvature are not larger than the radar wavelength and which have sizes which are not much smaller than the scanned area are considered. A two scale surface roughness is examined for small scale irregularities riding on gentle undulations. Particular attention is given to discrepancies between radar backscatter data from airborne scatterometry and from short-range scatterometry. The scattering model is compared with existing sea surface scatterometer data with favorable results. M.S.K.

A82-22147 **Landsat thermal imaging of alpine regions.** R. Lougeay (State University, New York, Geneseo, NY). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 269-273. 15 refs.

Satellite-borne thermal data from Landsat are shown to be of utility in alpine regions. Even the highly degraded Landsat-3 thermal data are shown to contain information which aids in the interpretation of imagery depicting highly glacierized landscapes with extreme topographic texture. Comparison is given between Landsat-3 visible (MSS band 5,600-700 nm) and thermal infrared (MSS band 8, 10,400-12,600 nm) images. Thermal patterns displayed on the Landsat thermal image are compared with ground level observations of radiometric emittance. The thermal data are shown to provide a rendition of topographic texture lacking in other spectral bands of Landsat data. (Author)

A82-25234 † **Orbital methods of celestial geodesy (Orbital'nye metody kosmicheskoi geodezii).** M. S. Urmaev. Moscow, Izdatel'stvo Nedra, 1981. 256 p. 74 refs. In Russian.

The book presents the state-of-the-art in the mathematical treatment of measurements used in orbital methods of celestial geodesy for the determination of the coordinates of satellite observation points. Basic principles of the use of orbital methods are examined, with attention given to the linearization of the fundamental equations and the solution of the overdetermined system of equations by the least squares method. The theory of the two-body problem is considered as the theoretical basis of the method, and a model of perturbed motion of a satellite is analyzed. The theory and methods of the calculation of the matrixant, a matrix of derivatives of the changing orbital elements with respect to their initial values, are examined in detail, and the numerical integration of the differential equations of motion by the Runge-Kutta, Adams, sequential approximation, Shenks, Bulirsh and Stoer, and Everhart methods is considered. The problem of the coordinate-time coupling of the results of spaceborne photography of the earth and moon by orbital methods is also discussed, and the nature of the measurements of orbital methods is examined in relation to the problem of observability. A.L.W.

A82-26012 **A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation.** O. P. G. Braun (Companhia de Pesquisa de Recursos Minerais, Rio de Janeiro, Brazil). *Photogrammetria,* vol. 37, Feb. 1982, p. 77-108. 11 refs. Translation. Research sponsored by the Companhia de Pesquisa de Recursos Minerais.

A structural synthesis of the Brazil topography is presented, based on SAR imagery from Landsat and SLAR data. Lineaments are divided into straight or curved alignments of discontinuous linear and congruent elements, and linear features extending several hundred kilometers. Manifestations of fracture zones are reviewed, including quartz bands, intercrossed faults, and volcanic rock dykes. The extended lineaments are noted to originate from fault zones with high angle planes, and main zones are distinguished in terms of post-Bambui activity and diastrophism-originated faults. Tectonic interpretations are given of the structural differences between the western and eastern parts of the country. Landsat topographic data was gathered on band 7 and phytophysiognomic properties on band 5. M.S.K.

A82-26048 **Area determination by means of the method of finite elements (Flächenbestimmung mit der Methode der Finiten Elemente).** G. Melykuti (Budapesti Muszaki Egyetem, Budapest, Hungary). *Bildmessung und Luftbildwesen,* vol. 50, Mar. 1, 1982, p. 49-58. In German. Research supported by the Alexander von Humboldt-Stiftung.

The method of finite elements provides very suitable approaches to take into consideration topographical characteristics and particularities in a mathematical description of the surface of the earth. The mathematical foundations of this method are discussed. The considered surface is a two-dimensional scalar field. The values of the scalar field and certain field characteristics are known at a finite number of points. Questions regarding the given relationships can be solved by differential geometry. The area can be determined with the aid of a differential equation and various boundary conditions. Approaches for solving the involved problems are discussed. An approximate solution can be obtained on the basis of the principle of the Ritz method by making use of a finite element procedure. This approach provides appropriate possibilities for taking into consideration the various boundary conditions. G.R.

A82-26266 * **Harmonic structure of Pc 3-4 pulsations.** K. Takahashi and R. L. McPherron (California, University, Los Angeles, CA). *Journal of Geophysical Research,* vol. 87, Mar. 1, 1982, p. 1504-1516. 49 refs. Grant No. NGL-05-007-004; Contract No. N00014-75-C-0396.

Power spectra of magnetic pulsations observed at synchronous orbit by the ATS 6 satellite often show several spectral peaks simultaneously. Such pulsations, called harmonic events because of the nearly constant separation between successive peaks, are continuously observed in the dayside in the Pc 3-4 frequency range (6.6-100 mHz). The harmonic events are seen clearly only in the east-west magnetic field component. The spectral peaks are regularly spaced with a typical minimum separation of 14 mHz in the morning gradually decreasing to 10 mHz in the afternoon. In the dynamic spectra of harmonic events, the fundamental mode is usually absent. In addition, the relative amplitudes of the higher harmonics depend on the magnetic latitude. These observed features can be explained by a standing Alfven wave consisting of many discrete harmonic frequencies. A statistical analysis of power spectra demonstrates that at least 10-30% of Pc 3 pulsations can be classified as harmonic events. For a selected event on August 7, 1975, the plasma mass density at the synchronous orbit is estimated to be 3-8 hydrogen mass/cu cm. (Author)

A82-26843 **Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image.** G. L. Berlin, G. C. Schaber, R. C. Kozak, and P. Chavez, Jr. (U.S. Geological Survey, Flagstaff, AZ). *Remote Sensing of Environment,* vol. 12, Mar. 1982, p. 81-85.

A82-27507 † **Investigation of the earth on the basis of space photographic data (Issledovanie planety zemlia po materialam kosmicheskoi fotoinformatsii).** V. D. Bol'shakov. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 57-66. In Russian.

The remote sensing of the earth's surface using the Zond and Salyut spacecraft is discussed, with particular emphasis on the use of space data for small-scale mapping and the revision of existing maps. The significance of color and multispectral photography for the remote sensing of earth resources is considered, and results on the study of the earth's figure from its planetary photographs are presented. Attention is also given to the development of efficient and automated operational systems of complex and thematic interpretation. B.J.

A82-27584 # **Airborne laser systems use in terrain mapping.** L. E. Link and J. G. Collins (U.S. Army, Engineer Waterways Experiment Station, Vicksburg, MS). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 95-110. 21 refs.

Perhaps the most significant recent advancements in measurement technology have resulted from the invention of the laser. As early as the mid-1960's, lasers were being placed in aircraft to examine their applicability to terrain mapping. The emerging new mapping technique has the potential to dramatically improve the capability to map topographic features and to provide quantitative environmental quality data that was previously impractical to acquire over large areas. Airborne laser mapping systems have two major components. A laser altimeter accurately measures the distance from the aircraft to a reflecting surface. Simultaneously, the positioning system records the location and orientation of the aircraft. Attention is given to details of laser system operation, positioning system operation, the status of available airborne systems, and airborne laser systems applications. G.R.

A82-27611 # **Application of side-looking color infrared photography for structure detection in subtle topography.** J. Aghassy (Pittsburgh, University, Pittsburgh, PA) and Z. Berger (Exxon Production Research Co., Houston, TX). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 491-497. 7 refs.

Examples are cited from a pilot study evaluating surface-form relationships in subtle topographies. Sequential photography taken from 150 m, 300 m, and 500 m above ground level at varying distances from the rims surrounding certain geological structures illustrates that the optimal height coupled with the optimal distance can unveil important stream and slope elements that aid in identifying structures. In addition, a comparison between color photography and Side-Looking Color Infrared (SLCIR) shows that in regular color photography, the close elements of topography are clear whereas the more remote ones are masked by haze in spite of filtering devices. In color IR, the effect of haze on distant elements is much less pronounced, and the details of successive parallel ridges are more clearly visible. SLCIR photos provide valuable insight into the normal evolutionary erosional process of surface expression and drainage components generated above different geological structures, thereby aiding in the verification of anomalies observed in Landsat imagery. C.R.

A82-27615 # **Topographic mapping using Landsat data.** G. D. Lodwick (Calgary, University, Calgary, Alberta, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 527-534.

The reported work developed from a major research project recently completed, which resulted in the development of a comprehensive computer system to identify and monitor ecological changes in multitemporal Landsat data. The project involved investigation of a study area in the upper Hunter Valley of New South Wales, Australia. A sequence of seven images taken in 1976 was analyzed. The method of cartographic adjustment was to model the surface of each image using complete cubic polynomials, spatially resected onto 21 ground control points. Attention is given to the prediction of site slope and the refinement of slope prediction. For this research project, data interpretation is concerned with evaluating the principal components and their scores. This involves broad observation throughout the study area, as well as specific observation at 25 sample sites using scores from all seven Landsat images. G.R.

A82-27631 * # **Wide area, coarse resolution imaging with satellite-borne synthetic aperture radars in low-earth and geosynchronous orbits.** K. Tomiyasu (GE Valley Forge Space Center, Philadelphia, PA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p.701-709. 9 refs. Contract No. NAS1-15657.

The LEOSAR (low-earth-orbit synthetic aperture radar) can map around the earth, while the GEOSAR (geosynchronous synthetic aperture radar) can map a large global area bounded in both longitudinal and latitudinal ranges. This paper presents the mapping capabilities and power requirements of both LEOSAR and GEOSAR. For a low-earth-orbit SAR, images of swath widths of the order of 700 km are possible with 100-m resolution and 300 watts of average transmitter power at 9375 MHz. From a SAR in a 50-deg inclined geosynchronous circular orbit, the contiguous United States can be imaged in about 6.4 hours with 100-m resolution, 345 watts of average transmitter power, and a data rate of 6 megabits/sec at 2450 MHz. B.J.

A82-27632 * # A shuttle scanning laser altimeter for topographic mapping. M. Kobrick and C. Elachi (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 711-714.

The shuttle scanning laser altimeter is an instrument, currently under development at JPL, capable of producing a three-dimensional elevation map of the topography along a wide swath beneath a spaceborne platform. Operating on the same principle as radar (broadcast of a short pulse of radiation and timing the reception of an echo) the very narrow beamwidths and high pulse rates of modern lasers would allow a significant breakthrough in the areal resolution capability of altimeters. Specifically, the copper vapor laser currently available and planned for use would provide 50 meter horizontal and 3 meter vertical resolution over a 10 kilometer continuous swath or, in a snapshot mode, a 50 kilometer square area. (Author)

A82-28134 † Analytic methods of geodetic referencing of nontopographic images (Analiticheskie metody geodezicheskoi priviazki netopograficheskikh izobrazhenii). V. I. Akovetskii, Iu. N. Korneev, and A. S. Sergeev. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 41-49. 6 refs. In Russian.

The paper examines the mathematical details of an analytic method for determining coordinates on the earth's surface from nontopographic images; the method can be used to solve a number of topographic and thematic problems. The method implemented on the Riad computer, has been experimentally verified and shown good results. The algorithm for solving a given problem consists of two independent elements: the solution of the direct photogrammetric intersection problem, and the solution of the inverse problem. B.J.

A82-28138 † Possibilities of using experience gained from the thematic mapping of the moon in studies of earth resources by remote sensing methods (O vozmozhnostiakh ispol'zovaniia opyta tematicheskogo kartografirovaniia luny pri issledovanii prirodnykh resursov zemli distantsionnymi metodami). N. N. Evsiukov, I. Iu. Levitskii, and I. G. Chervanev. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 66-72. 9 refs. In Russian.

Kharkov University has a facility that specializes in the mapping of the lunar surface on the basis of the photometric processing of photographic images; the facility incorporates automated processing of remote sensing images and mathematical techniques of cartographic analysis. This paper examines the possibility of applying techniques developed at this facility to the remote sensing and mapping of earth resources. Particular attention is given to the potential usefulness of a two-parameter map of the lunar surface. B.J.

A82-28139 † Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia (Vozmozhnosti ispol'zovaniia kosmicheskikh snimkov, poluchennykh s orbital'noi pilotiruemoi stantsii 'Saliut-5', dlia sostavleniia kompleksa [illegible]komasshtabnykh tematicheskikh kartskhem gornykh i predgo[illegible]ykh raionov Srednei Azii). REGIONAL PROPERTIES OF ANGULAR REFLECTANCE MODELS Ph.D. Thesis
John Michael Davis 1981 215 p
Avail: Univ. Microfilms Order No. 8126427

The inference of the reflected flux density from satellite radiance measurements requires a knowledge of the angular properties of the reflected radiance field. The angular dependence and the spatial variability of the radiance fields reflected from 30 regional atmospheric scenes were examined. The reflected radiance data set was collected from a high altitude aircraft during the Summer Monsoon Experiment using a unique multi-detector instrument which permitted an instantaneous sampling of the radiance fields from twelve angular veiwing coordinates. All of the scenes display sufficient anisotropy to conclude that neglecting the angular variation of the reflected radiances would lead to significant errors (10-100%) in the inferred flux density. Radiances over the relatively isotropic scenes converge to their regional mean values on a spatial scale which is small compared to that of the total region. Dissert. Abstr.

PARTICLE PRECIPITATION AND ATMOSPHERIC X-AND GAMMA-RAYS IN THE SOUTH ATLANTIC MAGNETIC ANOMALY BY BALLOON EXPERIMENTS Progress Report, 1968 - 1981
Jose Marques daCosta Jun. 1981 10 p refs Presented at the 1st Aeronomy Workshop Brazil-Argentina, Foz do Iguacu, Brazil, 18-20 Jul. 1981 Sponsored in part by the Fundo Nacional de Desenvolvimento Cientifico e Technologico - FNDCT
(INPE-2119-RPE/343) Avail: NTIS HC A02/MF A01

Particle precipitation from the Van Allen belts into the atmosphere of the South Atlantic magnetic anomaly region, were observed with balloon-borne instrumentation. Balloons carrying onboard charged particle and X-and gamma ray detectors formed by plastic scintillators were used. Measurements of bremsstrahlung X-rays and low energy gamma rays as well as the charged particles themselves were made at the altitude of the stratospheric balloons, and simultaneous measurements of the geomagnetic variations were made by rapid run ground magnetometers. S.L.

SOME NEW METHODS IN GEOMAGNETIC FIELD MODELING APPLIED TO THE 1960 - 1980 EPOCH
R. A. Langel, R. H. Estes (Business and Technological Systems, Seabrook, Md.), and G. H. Mead Dec. 1981 42 p refs Submitted for publication
(NASA-TM-83868) Avail: NTIS HC A03/MF A01 CSCL 08N

The utilization of satellite and surface data together permitted the incorporation of a solution for the anomaly field at each observatory. The residuals of the observatory measurements to such models is commensurate with the actual measurment accuracy. Incorporation of the anomaly estimation enabled the inclusion of stable time derivatives of the spherical harmonic coefficients up to the third derivative. A spherical harmonic model is derived with degree and order 13 in its constant and first time derivative terms, six in its second derivative terms and four in its third derivative terms. E.A.K.

SATELLITE AND SURFACE GEOPHYSICAL EXPRESSION OF ANOMALOUS CRUSTAL STRUCTURE IN KENTUCKY AND TENNESSEE

M. A. Mayhew (BTS, Inc.), H. H. Thomas, and P. J. Wasilewski
Jul. 1981 29 p refs
(NASA-TM-82163) Avail: NTIS HC A03/MF A01 CSCL 08N

An equivalent layer magnetization model is discussed. Inversion of long wavelength satellite magnetic anomaly data indicates a very magnetic source region centered in south central Kentucky. Refraction profiles suggest that the source of the gravity anomaly is a large mass of rock occupying much of the crustal thickness. The outline of the source delineated by gravity contours is also discernible in aeromagnetic anomaly patterns. The mafic plutonic complex, and several lines of evidence are consistent with a rift association. The body is, however, clearly related to the inferred position of the Grenville Front. It is bounded on the north by the fault zones of the 38th Parallel Lineament. It is suggested that such magnetization levels are achieved with magnetic mineralogies produced by normal oxidation and metamorphic processes and enhanced by viscous build-up, especially in mafic rocks of alkaline character. MATRIX DATA ANALYSIS: COLOR/B AND W CODING IS NOT ALWAYS ENOUGH Interim Report, 1976 - 1981

Marshall B. Faintich 1981 6 p refs
(AD-A108406) Avail: NTIS HC A02/MF A01 CSCL 09/2

The Defense Mapping Agency produces digital data bases that describe the physical appearance of the surface of the Earth. These data bases include, but are not limited to, terrain elevation, culture including landscape characteristics, and vertical features. This data is collected from digitized source maps, from optically or digitally correlated stereopairs of photographic imagery, and from digital multi-spectral sensor data. A dramatic impact has been made in the ability to analyze these digital data bases by applying state-of-the-art digital image technology processing and display concepts. These include a variety of color and/or black and white displays of not only intensity/color coded matrix data, but also image processed data using specialized convolution filters, texture discrimination, and special color representation techniques. In addition, computer generated imagery from these data bases serve as a final analysis tool. Author (GRA)

PROFILING SENSITIVITY TO IMAGE QUALITY Final Report

Dennis E. Moellman Oct. 1981 21 p refs
(AD-A108405) Avail: NTIS HC A02/MF A01 CSCL 09/2

This paper reports results from a study conducted by the Defense Mapping Agency (DMA) to determine the sensitivity of terrain profiling accuracy to input image quality. The study was accomplished by building a set of stereo test models over a test site; exercising those test models with current instruments; reducing the resultant profile data and comparing the results to existing ground control for the test site. The test models were produced from a single model by repeated steps of photographic enlargement, reduction and resolution degradation. The resultant 25 test models represented all combinations of five specific image scales and resolutions. The instruments were operated in both manual and automatic correlation modes. As a consequence the results portray the interdependence of profile accuracy with both scale and resolution as well as the effects of both manual and automatic profiling. The results also provide insight into the behavior of automatic correlation when approaching and exceeding the instrument's theoretical minimum resolution threshold. Author (GRA)

HELMUT WOLF: ON THE OCCASION OF HIS 70TH BIRTHDAY [HELMUT WOLF ZUM 70. GEBURTSTAG]

Verlag der Bayerischen Akademie der Wissenschaften 1980 45 p refs In GERMAN Presented at Bonn, 2 May 1980
(Ser-E-18; ISSN-0065-5341; ISBN-3-7696-9663-8) Copyright. Avail: Issuing Activity

The life and accomplishments of Helmut Wolf, and his contribution to theoretical geodesy are described. A collection of publications and lectures in the geodetic sciences is presented. Wolf's contribution to the development of geodestic surveys and to the mathematical and stochastic model of photogrammetry are outlined. Transl. by E.A.K.

N82-19604 Deutsches Geodaetisches Forschungsinstitut, Munich (West Germany).

DEVELOPMENTS IN GEODESY WITHIN THE SCOPE OF HELMUT WOLF'S WORK [DIE ENTWICKLUNG DER ERDMESSUNG IN SPIEGEL DES WERKES HELMUT WOLFS]

Helmut Moritz *In its* Helmut Wolf: On the Occasion of his 70th Birthday 1980 p 5-12 In GERMAN

Avail: Issuing Activity

Twenty years of progress in geodetic surveys, the use of artificial satellites and their practical applications are described. Gravimetric methods, astrogeodetic methods, statistical procedures in the physical geodesy, and geodetic problems in geodynamics are discussed. It is found that in the geometric reference system of deep geodynamic observations the axis of rotation of the Earth is a fundamental direction of reference which changes, whether it is in the universe or on terrestrial bodies. E.A.K.

N82-19605 Deutsches Geodaetisches Forschungsinstitut, Munich (West Germany).

MATHEMATICAL AND STOCHASTIC MODELS IN PHOTOGRAMMETRY RELATING TO HELMUT WOLF'S WORK [DAS MATHEMATISCHE UND STOCHASTISCHE MODELL DER PHOTOGRAMMETRIE MIT BEZUG AUF DAS WERK HELMUT WOLFS]

Hellmut Schmid *In its* Helmut Wolf: On the Occasion of his 70th Birthday 1980 p 13-27 In GERMAN

Avail: Issuing Activity

The development of a mathematical model which is applied to interpret the measured variables and random variables with their characteristic random noise is discussed. It is posited that for typical geometric problems, as well as for geodetic and photogrammetric tasks it is possible to analyze specific geometrically established solvent algorithms quantitatively and qualitatively. Such a computing method is often advantageous, especially because it can be applied to practical engineering. E.A.K.

EQUIVALENT SOURCE MODELING OF THE MAIN FIELD USING MAGSAT DATA Quarterly Report, 1 Apr. - 30 Jun. 1981

11 Aug. 1981 4 p ERTS
(Contract NAS5-26047)
(E82-10041; NASA-CR-164918; QR-6) Avail: NTIS HC A02/MF A01 CSCL 08G

Magsat dipole solution models were obtained with both 32 deg and 21 deg resolution based on a data set extending over 4 months. Time dependence was modeled using first time derivatives for the dipole magnetization vector components. This doubles the n total number of parameters in the solution. The solutions displayed a very slow convergence in time derivatives although at each iteration the conversion of the dipole parameters to spherical harmonic coefficients showed close agreement with the MGST (12/80) spherical harmonic model to degree 13 in the constant terms and 8 in the secular variation terms. The program error in the option to simultaneously estimate observatory anomaly biases was found and corrected. A 32 deg resolution dipole model was generated using the selected magnetic observatory data from 1960-1977 used in the GSFC (9/80) spherical harmonic model. A.R.H.

ELECTROMAGNETIC DEEP-PROBING (100-1000 KMS) OF THE EARTH'S INTERIOR FROM ARTIFICIAL SATELLITES:

CONSTRAINTS ON THE REGIONAL EMPLACEMENT OF CRUSTAL RESOURCES Quarterly Progress Report, 30 Jun. - 30 Sep. 1981
John F. Hermance, Principal Investigator 30 Sep. 1981 9 p refs ERTS
(Contract NAS5-26138)
(E82-10043; NASA-CR-164920; QPR-5) Avail: NTIS HC A02/MF A01 CSCL 08G

An algorithm was developed to address the problem of electromagnetic coupling of ionospheric current systems to both a homogeneous Earth having finite conductivity, and to an Earth having gross lateral variations in its conductivity structure, e.g., the ocean-land interface. Typical results from the model simulation for ionospheric currents flowing parallel to a representative geologic discontinuity are shown. Although the total magnetic field component at the satellite altitude is an order of magnitude smaller than at the Earth's surface (because of cancellation effects from the source current), the anomalous behavior of the satellite observations as the vehicle passes over the geologic contact is relatively more important pronounced. The results discriminate among gross lithospheric structures because of difference in electrical conductivity. A.R.H.

Efforts continue in the development of a computer program for looking at the coupling of finite-dimensional source fields with a laterally heterogeneous Earth. An algorithm is also being developed for calculating a time-varying reference field using ground-based magnetic observatory data. It was discovered that ground-based standard magnetic observation is not as so available for the time of the MAGSAT mission as might be expected. Attempts are being made to determine the exact times and observatories from which data are available. A.R.H.

The westward drift of the geomagnetic field was analyzed using models from Magsat which include secular variation. Two approaches were utilized. A straightforward covariance method gave large drift rates (0.25 degr./yr and up) and suggested that the drift was larger in the Southern Hemisphere than in the Northern, and was small near the poles. The drawback was a rather large noise level superimposed on a small signal. The other approach followed the method of A.D. Richmond and obtained drifts of the order of 0.1 deg/yr. The use of Magsat to study the Backus effect is explored. Particular attention is drawn to the comparison with resuls of general inverse analysis. A.R.H.

A scheme was developed for separating the portions of the magnetic field measured by the Magsat 1 satellite that arise from internal and external sources. To test this method, a set of sample coefficients were used to compute the field values along a simulated satellite orbit. This data was then used to try to recover the original coefficients. Matrix inversion and recursive least squares methods were used to solve for the input coefficients. The accuracy of the two methods are compared. M.G.

(SER-B-253-Mitt-159-Pt-2; ISSN-0071-9196) Avail: NTIS HC A22/MF A01

Diagnostic balancing in triangulation networks was investigated. The purpose of defining the network for diagnostic balancing is to reduce the balance of the edge effect. The computer program is based on observations of the geographic coordinates system. The following tasks were performed: compilation of results from end to end measurements; execution of end to end measurements in the triangulation network; reduction of field length; and, calculation of end to end measurements. INFORMATION THEORY LATERAL DENSITY DISTRIBUTION FOR EARTH INFERRED FROM GLOBAL GRAVITY FIELD
David Parry Rubincam Oct. 1981 64 p refs Submitted for publication
(NASA-TM-83825) Avail: NTIS HC A04/MF A01 CSCL 08N

Information Theory Inference, better known as the Maximum Entropy Method, was used to infer the lateral density distribution inside the Earth. The approach assumed that the Earth consists of indistinguishable Maxwell-Boltzmann particles populating infinitesimal volume elements, and followed the standard methods of statistical mechanics (maximizing the entropy function). The GEM 10B spherical harmonic gravity field coefficients, complete to degree and order 36, were used as constraints on the lateral density distribution. The spherically symmetric part of the density distribution was assumed to be known. The lateral density variation was assumed to be small compared to the spherically symmetric part. The resulting information theory density distribution for the cases of no crust removed, 30 km of compensated crust removed, and 30 km of uncompensated crust removed all gave broad density anomalies extending deep into the mantle, but with the density contrasts being the greatest towards the surface (typically + or 0.004 g cm 3 in the first two cases and + or - 0.04 g cm 3 in the third). None of the density distributions resemble classical organized convection cells. The information theory approach may have use in choosing Standard Earth Models, but, the inclusion of seismic data into the approach appears difficult. Author

GRAVITY AND GEOID ANOMALIES OF THE PHILIPPINE SEA: EVIDENCE ON THE DEPTH OF COMPENSATION FOR THE NEGATIVE RESIDUAL WATER DEPTH ANOMALY
Carl Bowin [1982] 27 p refs
(Grant NAG5-18)
(NASA-CR-168639; WHOI-4931) Avail: NTIS HC A03/MF A01 CSCL 08G

A negative free-air gravity anomaly which occurs in the central part of the Philippine Sea was examined to determine the distribution and nature of possible regional mass excesses or deficiencies. Geoid anomalies from GEOS-3 observation were positive. A negative residual geoid anomaly consistent with the area of negative free-air gravity anomalies were found. Theoretical gravity-topography and geoid-topography admittance functions indicated that high density mantle at about 60 km dept could account for the magnitudes of the gravity and residual geoid anomaly and the 1 km residual water depth anomaly in the Philippine Sea. The negative residual depth anomaly may be compensated for by excess density in the uppermost mantle, but the residual geoid and regional free-air gravity anomalies and a slow surface wave velocity structure might result from low-density warm upper mantle material lying beneath the zone of high-density uppermost mantle. From a horizontal disk approximation, the depth of the low-density warm mantle was estimated to be on the order of 200 km. M.D.K.

SOME CRITERIA FOR THE ACCURACY AND THE RELIABILITY OF NETWORKS

Hans Pelzer *In its* Contrib. from the Federal Rep. of Ger. to the 17th Gen. Assembly of Intern. Union of Geodesy and Geophys. 1980 p 55-67 refs

Avail: NTIS HC A06/MF A01

Design criteria for optimizing the quality of a geodetic network, taking both the functional and the stochastic model of the network into account, are derived. An effective global accuracy criterion is shown to be obtainable from the maximum eigenvalue of the cofactor matrix of the vector of points coordinates. The essential eigenvectors of the same matrix are identified as indicators for functions with maximum variance. A reliability criterion can be obtained by means of a reliability parameter constructed by gross error testing of each observation. To this end a nomogram is made available. Author (ESA)

EXPERIMENTS IN SATELLITE DOPPLER CONTROL POSITIONING AT SEA

Guenter Seeber, Delf Egge, and Hans Werner Schenke *In its* Contrib. from the Federal Rep. of Ger. to the 17th Gen. Assembly of Intern. Union of Geodesy and Geophys. 1980 p 69-80 refs Sponsored by Bundesministerium fuer Forschung- und Technologie and Deutsche Forschungsgeimschaft

Avail: NTIS HC A06/MF A01

Experiments on the application of the transit satellite system, which utilizes Doppler control positioning, for an extension of classical continental geodetic networks beyong the shore lines are described. The experiments were conducted in the North Sea area and deal with: (1) fixed point positioning on a platform; (2) positioning of a moored buoy; (3) positioning of a drifting buoy. The evaluation indicates that for fixed or stationary motion conditions no accuracy decrease occurs provided an accumulated solution is made. For nonstationary motion one has to resort to position fixes with single satellite passes so that no accumulated increase of precision can be obtained. Experiments to assess the inherent accuracy of the Doppler satellite method in a single pass solution are presently underway. Author (ESA)

RECENT RESULTS OF GEOID DETERMINATION BY COMBINATION TECHNIQUES IN THE NORTH SEA TEST AREA

Hans-Georg Wenzel *In its* Contrib. from the Federal Rep. of Ger. to the 17th Gen. Assembly of Intern. Union of Geodesy and Geophys. 1980 p 95-121 refs Sponsored by Deutsche Forschungsgeimschaft

Avail: NTIS HC A06/MF A01

Gravity anomalies, GEOS 3 satellite altimetry and astrogeodetic vertical deflections were used to determine gravimetric, altimetric and astrogeodetic geoids in the North Sea test area. The agreement between these independent geoids is below the 1 m level and no sea surface topography could be detected. Simple averaging techniques, and stokes and least square collocations are used to determine combined geoids with an accuracy believed to be below the 0.5 m level. Author (ESA)

INVESTIGATION OF ANTARCTIC CRUST AND UPPER MANTLE USING MAGSAT AND OTHER GEOPHYSICAL DATA Quarterly Progress Report

C. R. Bentley, Principal Investigator 9 Sep. 1981 2 p refs ERTS

(Contract NAS5-25977)

(E82-10062; NASA-CR-165084; NAS 1.26:165084; QPR-6) Avail: NTIS HC A02/MF A01 CSCL 08G

Progress in processing and analysis of Investigator B MAGSAT data is reported. Data processing tasks required prior to data analysis, including translation and reformatting of tapes and development of computer routines, were performed. A scalar anomaly map of Antarctica is near completion. Data analysis included a qualitative correlation of NASA's 4/81 scalar map of Antarctica with other geopotential data and correlation of POGO and continental scale gravity data with MAGSAT data. A magnetic high was found to exist over the Ross Embayment. J.D.H.

[MAGSAT ANOMALY PROFILES OF THE EASTERN INDIAN OCEAN] Quarterly Progress Report, 1 Apr. - 30 Jun. 1981

Richard V. Sailor, Principal Investigator and Andrew R. Lazarewicz 15 Aug. 1981 21 p refs ERTS

(Contract NAS5-26424)

(E82-10066; NASA-CR-165088; NAS 1.26:165088; PR-1325-2) Avail: NTIS HC A02/MF A01 CSCL 05B

Ground tracks from SEASAT were used in an effort to develop qualititative relationships between the gravity field and MAGSAT magnetic anomalies in the eastern Indian Ocean. Investigation of data quality led to analyses of the average value (over 80 vector data points, or approximately 36 km intervals) and of the standard deviation of this average, as a mean of identifying noisy portions of the data. It was discovered that the plots of the average value minus the individual (measured) point value are most useful for identifying noisy areas and data spikes. Spectrum analysis using edited (spikes removed) data show that the noise floor is less than 1 nT and the slope of the spectrum in the region of wavelengths between 1200 km and 250 km is approximately -3. Consequently the estimated resolution limit improved from approximately 360 km to approximately 250 km. A.R.H.

SPHERICAL HARMONIC REPRESENTATION OF THE MAIN GEOMAGNETIC FIELD FOR WORLD CHARTING AND INVESTIGATIONS OF SOME FUNDAMENTAL PROBLEMS OF PHYSICS AND GEOPHYSICS Progress Report

D. R. Barraclough, R. Hide, B. R. Leaton, F. J. Lowes, S. R. C. Malin, and R. L. Wilson, Principal Investigators 1 Oct. 1981 8 p refs Sponsored by NASA ERTS

(E82-10075; NASA-CR-165097; NAS 1.26:165097) Avail: NTIS HC A02/MF A01 CSCL 08G

Quiet-day data from MAGSAT were examined for effects which might test the validity of Maxwell's equations. Both external and toroidal fields which might represent a violation of the equations appear to exist, well within the associated errors. The external field might be associated with the ring current, and varies of a time-scale of one day or less. Its orientation is parallel to the geomagetic dipole. The toriodal field can be confused with an orientation in error (in yaw). It the toroidal field really exists, its can be related to either ionospheric currents, or to toroidal fields in the Earth's core in accordance with Einstein's unified field theory, or to both. INVESTIGATION OF ANTARCTIC CRUST AND UPPER MANTLE USING MAGSAT AND OTHER GEOPHYSICAL DATA Quarterly Status and Technical Progress Report

C. R. Bentley, Principal Investigator 30 Nov. 1981 6 p refs ERTS

(Contract NAS5-25977)

(E82-10147; NASA-CR-168532; NAS 1.26:168532; QTPR-7) Avail: NTIS HC A02/MF A01 CSCL 08G

The isolation of the crustal magnetic anomaly field is discussed. Slowly spatially varying ring current fields were modeled as a least squares fit to each MAGSAT pass over Antarctica. Selection criteria were applied to data from 3000 MAGSAT passes to remove field aligned currents, yielding 87 data sets used to construct a scalar magnetic anomaly map for regions south of 55 S latitude. Internal tests performed on MAGSAT data and omparisons with the POGO map indicated that the general anomaly features are of crustal origin. The sources of anomalies generated in continental and in oceanic regions are discussed. Correlations were found between crustal magnetic anomalies and known geologic features over West and East Antarctica and over the surrounding oceanic regions. J.D.

COMPARISON OF STORM-TIME CHANGES OF GEOMAGNETIC FIELD AT GROUND AND AT MAGSAT ALTITUDES Progress Report

Rajaram Purushottam Kane and Nalin Babulal Trivedi Dec. 1981 15 p refs Sponsored by NASA ERTS

(E82-10148; NASA-CR-168533; NAS 1.26:168533) Avail: NTIS HC A02/MF A01 CSCL 08G

Computations concerning variations of the geomagnetic field at MAGSAT altitudes were investigated. Using MAGSAT data for the X, Y, and Z components of the geomagnetic field, a computer conversion to yield the H component was performed. Two methods of determining delta H normalized to a constant geocentric distance R sub 0 = 6800 were investigated, and the utility of elta H at times of magnetic storms was considered. Delta H at a geographical latitude of 0 at dawn and dusk, the standard Dst, and K sub p histograms were plotted and compared. Magnetic anomalies are considered. Examination of data from the majority of the 400 passes of MAGSAT considered show a reasonable delta H versus latitude variation. Discrepancies in values are discussed. J.D.

(Contract NAS5-26138)

(E82-10155; NASA-CR-168540; NAS 1.26:168540; QPR-6) Avail: NTIS HC A02/MF A01 CSCL 08G

Model simulations show that induction in a spherical Earth by distant magnetospheric sources can contribute magnetic field fluctuations at MAGSAT altitudes which are 30 to 40 percent of the external field amplitudes. When the characteristic dimensions (e.g. depth of penetration, etc) of a particular situations are small compared with the Earth's radius, the Earth can be approximated by a plane horizontal half space. In this case, electromagnetic energy is reflected with close to 100 percent efficiency from the Earth's surface. This implies that the total horizontal field is twice the source field when the source is above the satellite, but is reduced to values which are much smaller than the source field when the source is below the satellite. This latter effect tends to enhance the signature of gross electrical discontinuities in the lithosphere when observed at satellite altitudes. A.R.H.

A DIGITAL TECHNIQUE FOR CONSTRUCTING VARIABLE-WIDTH LINES

Richard L. Rosenthal Mar. 1982 10 p

(AD-A110287; ETL-R031) Avail: NTIS HC A02/MF A01 CSCL 08/2

This paper describes a digital technique for constructing variable-width cartographic lines. Specifically, an algorithm is developed for generating symbolized lines using multiply-stoked centerline data. Algorithmic development considers three factors: cartographic principles, inherent problems with existing algorithms, and hardware constraints imposed by specific output devices including the Defense Mapping Agency's Laser Platemaker. Software developed from the algorithm uses simple trigonometric functions and may be implemented in applications using vector data with vector or raster plotters. Author (GRA)

COMPUTER BASED TECHNIQUE FOR CONVERTING A CONTOUR MAP INTO AN EQUISPACED GRID OF POINTS

P. A. Roberts London HMSO Sep. 1980 68 p

(RAE-TR-80110; RAE-Space-586; BR77598) Avail: NTIS HC A04/MF A01

The purpose of the grid representation is to enable the map data to be handled more easily in a computer. Contours are assumed to represent some physical quantity and thus the variable represented by the contour height is a single valued function of the map coordinates. It is also assumed that the variable is smooth and continuous. The technique has applications in image processing where it may be necessary to compare (by ratioing) an image and a contour map. A grid representation is also an essential prerequisite for degrading the spatial resolution of a contour map by convolution, thus enabling contour maps having different resolutions to be compared at a common resolution. The interpolation algorithms and the reasons for their use are described in detail. Operations are described which may be required to be performed on a grid; those of expanding (or contracting) the number of data points in the grid, and the construction of cross sections. Listings of all programs, written in ANSI FORTRAN V are given. Author (ESA)

The paper presents and examines portions of a geomorphological map of the earth, with a scale of 1:15,000,000, compiled on the basis of space imagery and photomosaics. The use of space photographs has made it possible to delineate the general morphostructural plan of large areas of continents and the natural patterns of morphostructures. B.J.

A82-20341 † **The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt (K voprosu o sootnoshenii seismichnosti s lineamentami Anatoliisko-Kavkazsko-Iranskogo segmenta Sredizemnomorskogo poiasa).** T. L. Korovina (Akademiia Nauk SSSR, Institut Kosmicheskikh Issledovanii, Moscow, USSR) and A. S. Karakhanian (Akademiia Nauk Armianskoi SSR, Institut Geologicheskikh Nauk, Yerevan, Armenian SSR). *Issledovanie Zemli iz Kosmosa,* Nov.-Dec. 1981, p. 27-34. 15 refs. In Russian.

A comparison of remotely sensed data from Meteor, Soyuz, and Salyut data with statistical data on seismic activity made it possible to determine the regional and superregional lineaments that control seismic activity in the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt. The junctions of the lineaments considered are the seismic foci of intense earthquake zones. The general relationship obtained here can be used as an additional criterion for the forecasting of earthquakes. B.J.

A82-20342 † **Structural analysis of the basement of the East European platform by remote sensing methods (Analiz struktur fundamenta Vostochno-Evropeiskoi platformy distantsionnymi metodami).** D. V. Lopatin (Akademiia Nauk SSSR, Institut Geologii i Geokhronologii Dokembriia, Leningrad, USSR). *Issledovanie Zemli iz Kosmosa,* Nov.-Dec. 1981, p. 35-40. 13 refs. In Russian.

It is shown that the interpretation of aerial and space imagery and geomorphological analysis can assist in the identification of Precambrian basement structures under sedimentary cover in Eastern Europe. The existence of early Archaen mobile zones dividing the platform into three large geoblocks was confirmed. In addition, early Proterozoic Rapakivi granitoid massifs were found to be volcano-plutonic structures of central type. B.J.

A82-25453 **Dip determinations in photogeology.** M. Ricci. *Photogrammetric Engineering and Remote Sensing,* vol. 48, Mar. 1982, p. 407-414. 21 refs.

A photogeological dip determination method which is free of conceptual error and, in addition, is both rapid and accurate, is presented. The method is based on (1) parallax difference measurements and (2) the use of a trigonometric formula which incorporates perspective correction, and is shown capable of determining dip angles independently of the position and orientation of the photographic inclined bed images for the entire range of angle values. Comparisons are presented of the present method's results with those of previously published methods. O.C.

A82-26013 **The Pampean Plain studied with Landsat images.** P. Pasotti and C. A. Canoba (Rosario, Universidad Nacional, Rosario, Argentina). *Photogrammetria,* vol. 37, Feb. 1982, p. 109-130. 31 refs.

Topographical charts, aerial photographs, and Landsat imagery from bands 5 and 7 were employed for a visual investigation of the tectonics in the Pampean Plain in the Sante Fe Province of Argentina. Satellite imagery was examined by magnifying glass inspection, and a mosaic of photographs was built to portray the low flooded zones. The last hydrographic network of the Pleistocene age was identified, and is formed of many parallel and straight depressions running SW-NE from the western mountains. A smooth sinusoidal flexure with a large radius of curvature generating one depressed and two uplifted subregions comprise the tectonic movements, and hydrographic studies are indicated to determine the characteristics of geofracture dividing the pampas. Additional color composites using different combinations of bands 4-7 were explored for information on lineaments, valleys, and the depressed zones. M.S.K.

A82-26014 **Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/.** A. Bahmad (Service Régional de la Géologie, Midelt, Morocco), H. Chariai (Service Régional de la Géologie, Marrakech, Morocco), A. Djerrari, A. El Kochri (Paris VI, Université, Paris, France), E. A. Hilali (Direction de la Géologie, Rabat, Morocco), D. Ratz, A. L. G. Tamain (Paris XI, Université, Orsay, Essonne, France), and T. Saqalli (Société de Sel de Mohammedia, Mohammedia, Morocco). *Photogrammetria,* vol. 37, Feb. 1982, p. 131-150. 38 refs.

The use of Landsat generated imagery as the first step in geological research of the Moroccan High Atlas is reviewed. Initial examination of photographs results in the construction of structural and lineaments maps. Comparisons with existing geological maps yield further, structural and fractural charts. Little cloud cover was observed on the high summits, and the detection of anticlines, synclines, and continuous and discontinuous faults is discussed. A parallelism was found between the direction of the faults and the lengthening of the folded regions, indicating subvertical tectonic faults. The distribution of alkaline magmatism is outlined, having settled in the upper Jurassic to early Cretaceous periods, and dense wefts are taken as further evidence that the faults tend toward the vertical with greater depth. M.S.K.

A82-26015 **Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery.** P. M. Brück (University College, Cork, Ireland) and P. J. O'Connor (Geological Survey of Ireland, Dublin, Ireland). *Photogrammetria,* vol. 37, Feb. 1982, p. 151-159. 16 refs.

Landsat imagery was combined with existing geologic maps of the Leinster Granite in SE Ireland to develop a model of hydrothermal processes in the area and detect the fracture zones. Observed linears were interpreted as fractures, and satellite imagery allowed the discernment of hydrothermal alteration zones, occurrences of spodume and red-feldspar pegmatites, and explosion breccias. Pb-Zn mineralization sites displayed a spatial association with a transverse fracture system, with galena and sphalerite the main ores in veins with thicknesses ranging from a few meters to a few cm. Hydrothermal processes which may have led to the formation of the Leinster Granite are detailed, along with a suggestion that fractures occuring late in the cooling granite's history formed channels for circulating ground waters. M.S.K.

A82-26016 **Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India.** M. N. Qureshy (Department of Science and Technology, New Delhi, India). *Photogrammetria,* vol. 37, Feb. 1982, p. 161-184. 35 refs.

Linear zones correlated with surface geology, geophysical data, and Landsat data for parts of India are reviewed, along with mappings of magnetic and gravitational anomalies correlated with the tectonic framework of the subcontinent. Reactivation tendencies were observed in a megalineament in west central India, and is taken as evidence of continued activity of global tectonic forces. Linears were detected to cluster around regions of a gravitational high, and the recurrence of particular mineral-bearing lineaments with successive phases of activity is suggested. The use of Landsat data in conjunction with photogeological studies at the surface is considered as useful for determining surface features which originate in processes in the mantle. M.S.K.

A82-26017 **One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precam-**

brian metamorphics of Singhbhum, eastern India. A. N. Sarkar (Geological Survey of India, Map Div., Calcutta, India) and D. K. Chakraborti (Geological Survey of India, Agartala, India). *Photogrammetria,* vol. 37, Feb. 1982, p. 185-201. 27 refs.

A stratigraphic/tectonic analysis of the Singhbhum district in India, aided by imagery from Landsat I, is presented. Analyses of the rocks found in the area are reviewed, with particular attention to the potential existence of an Iron Ore and a Singhbhum Group of rocks of different geologic ages delineating northern metamorphic rocks and southern older rocks, with the southern rocks actually part of the same stratigraphic group as the northern rocks. An observed shear zone running E-W is concluded not to demarcate two different metamorphic belts, and deformation actually occurred during the orogenesis which ended in an ENE-WSW diagonal sinistral shearing in the western part of the district. M.S.K.

A82-26604 * **Ore deposits in Africa and their relation to the underlying mantle.** H.-S. Liu (NASA, Goddard Space Flight Center, Greenbelt, MD). *Modern Geology,* vol. 8, no. 1, 1981, p. 23-36. 70 refs.

African magmatism is largely related to the tensional stress regimes of the crust which are induced by the hotter upwelling mantle rocks. These mantle rocks may provide emanating forces and thermal energy for the upward movements of primary ore bodies with fluid inclusions in the tensional stress regimes of the crust. In this paper, the Goddard Earth Gravity Model is used to calculate a detailed subcrustal stress system exerted by mantle convection under Africa. The resulting system is found to be correlated with the African metallogenic provinces. Recognition of the full spectrum of ore deposits in Africa that may be associated with the hotter upwelling mantle rocks has provided an independent evidence to support the hypothesis of mantle-derived heat source for ore deposits. A82-27466 † **Application of aerial and space photographic data in the study of subsurface water and tectonic structures (Primenenie materialov aerokosmicheskikh s'emok v issledovanii podzemnykh vod i tektonicheskikh struktur).** E. Radai. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 70-76. In Russian

The paper examines the use of aerial and space photography data to create a network for monitoring subsurface water in karst areas of the Danube region. The interpretation of space remote sensing images has made it possible to obtain new data on the geological structure of a basin in the area as well as to detect tectonic structures in two massifs. B.J.

A82-27600 * # **A data base of geologic field spectra.** A. B. Kahle, A. F. H. Goetz, H. N. Paley, R. E. Alley, and E. A. Abbott (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 329-337. NASA-supported research.

It is noted that field samples measured in the laboratory do not always present an accurate picture of the ground surface sensed by airborne or spaceborne instruments because of the heterogeneous nature of most surfaces and because samples are disturbed and surface characteristics changed by collection and handling. The development of new remote sensing instruments relies on the analysis of surface materials in their natural state. The existence of thousands of Portable Field Reflectance Spectrometer (PFRS) spectra has necessitated a single, all-inclusive data base that permits greatly simplified searching and sorting procedures and facilitates further statistical analyses. The data base developed at JPL for cataloging geologic field spectra is discussed. C.R.

A82-27612 # **Automatic linear recognition and analysis using computer program LIRA.** D. H. Coupland and R. K. Vincent (Geospectra Corp., Ann Arbor, MI). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 499-508.

Computer program LIRA will automatically recognize and map linear features in digital images. Input to the program is a magnetic tape containing the image to be analyzed; output is a list of linears found and a linear plot which overlays the original image. LIRA does not replace the human interpreter, but speeds his work and provides an objective criterion for interpreting linear features in tonal images. Linears recognized by LIRA map major faults, lithologic boundaries, drainage and erosional patterns, and other features of geologic interest. In Landsat frame La Ronge (northern Saskatchewan), linear recognition maps produced by LIRA show a detailed relationship to published geologic maps. Significant variations in linear density and azimuthal distribution are seen between major geologic regions. (Author)

A82-27635 # **Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources.** J. Stix (Los Alamos National Laboratory, Los Alamos, NM). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 735-750. 43 refs.

Seasat synthetic aperture radar (SAR) satellite imagery was used to interpret the structural framework and, indirectly, the geothermal potential of an area in Western Nebraska. Lineaments were mapped from the imagery and then compared to known structure. It was found that Seasat does record surface manifestations of subtle basement structures, particularly faulting. Furthermore, four areas with geothermal potential were delineated using Seasat and other data. It is stressed that more subsurface geology and geophysical data are needed before a final evaluation of the geothermal potential can be made. Seasat imagery is a useful reconnaissance exploration tool in the interpretation of regional structure within areas of little topographic relief. (Author)

A82-27672 # **Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale.** C. M. Marino, G. Miglio, E. Zini (Milano, Università, Milan, Italy), and P. M. Rossi (CNR, Centro di Studio per la Stratigrafia e Petrografia delle Alpi Centrali, Milan, Italy). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1153-1162. 12 refs.

This paper describes a study on the integration of Landsat, geological and geophysical data over a large test-site in the western portion of Northern Apennines Range. In this framework particular attention was devoted to the use of hydrographic network as a new parameter to be considered in the process of temporal classification of linear phenomena. Moreover reference is made to the regional contribution of geophysical data mainly to test the validity of some hypotheses arisen from the analysis of satellite images. (Author)

A82-27694 # **Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data.** P. W. Mausel, R. C. Howe, and K. Lulla (Indiana State University, Terre Haute, IN). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. A82-27695 # **Airborne remote sensing in east Greenland.** J.-C. Favard (Centre National d'Etudes Spatiales, Toulouse, France), J. F. Scanvic (Bureau de Recherches Géologiques et Minières, Orléans, France), A. L. Friedman (Christian Rovsing A/S, Herlev, Denmark), and T. Thyrsted (Gronlands Geologiske Undersogelse, Copenhagen, Denmark). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1411-1424.

A joint French-Danish investigation was conducted with the objective to study the feasibility of an employment of multispectra observation techniques in geological research projects. A region in east Greenland was selected as a test site in connection with a

number of advantages provided by the involved area. These advantages are related to a wind range of geological environments, a wide variety of mineralization types, and limitations with respect to vegetation and secondary cover. Three test areas were studied. Two multispectral scanners were employed in the investigation, including one instrument for the visible and near-infrared spectral region, and another instrument used as thermal scanner. Flight altitudes at 2,500 m and 5,000 m above ground were used. The obtained data are found to make a meaningful contribution to mining prospection, because they provide mapping precision or define original prospection aims.

A82-27705 # Applications of aircraft and satellite data for the study of archaeology and environment - Mekong Delta, Vietnam. A. Lind (Vermont, University, Burlington, VT). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1529-1537.

An account is given of the way in which Landsat data have been used in conjunction with aerial photography to study and map the imprints of early hydraulic civilizations and the pattern of geomorphic changes of a dynamic delta environment. It is noted that many studies have demonstrated the applicability of remote sensing data to the investigation of fluvial and coastal environments. Data of this type are applied here to reconstructing geomorphic conditions in the Trans-Bassac, a plain bounded by the Bassac River and the Gulf of Thailand. Landsat is shown to provide a broader perspective of the canals previously discerned by aerial photography and to give clues to extensions of these canals.

REPORT ON A SHORT COURSE IN REMOTE SENSING AND THE GEOLOGICAL APPLICATIONS OF LANDSAT MSS IMAGERY AT INPE
Nelson deJesusParada, Principal Investigator and Kampta Persaud (Geological Survey Dept. (Guyana)) Oct. 1980 48 p refs Sponsored by NASA ERTS
(E82-10024; NASA-CR-164813; INPE-1923-RPE/249) Avail: NTIS HC A03/MF A01 CSCL 05B

Training in the theory of remote sensing in Brazil involves studying the principles of electromagnetic radiation and the instrumentation used to measure the radiation characteristics of a body. The overall LANDSAT system is considered with emphasis on the multispectral band scanner and Brazil's participation in the LANDSAT Program. Geologic information from MSS imagery is at a regional scale, and three basic types are available: rock and soil, geologic structures, and landforms. Discrimination between alluvium and sedimentary or crystalline bedrock, and between units in thick sedimentary sequences is best, primarily because of topographic expressions and vegetation differences. Discrimination between crystalline rock types is poor. Folds and fractures are the best displayed geologic features and are recognizable by topographic expressions, drainage patterns, and rock or vegetational tonal patterns. Landforms are easily discriminated by their familiar shapes and patterns. The IMAGE-100 computer has the ability to extract thematic information and to enhance the image.

INTEGRATION OF LANDSAT WITH GEOLOGY AND AIRBORNE GEOPHYSICS INTO AN OPERATIONAL MINERAL EXPLORATION SYSTEM Final Report, Jun. 1978 - Dec. 1980
R. J. P. Lyon and M. F. Crawford, Principal Investigators Mar. 1981 270 p refs Prepared for JPL, Pasadena, Calif. Original contains imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198. ERTS
(Contract JPL-955047)
(E82-10028; NASA-CR-164433) Avail: NTIS HC A12/MF A01 CSCL 08G

Digital data, gamma-ray spectrometry and aeromagnetic data were digitally combined and analyzed for the Bearlodge area (northeastern Wyoming) where potential resources of thorium and rare earths occur. The combined LANDSAT-geophysical data set revealed several geologic structures that were not evident in a single data set for the study area. Both qualitative and quantitative methods of analysis were performed on the combined data sets. Qualitative analysis of the data was done on a computer controlled, interactive color TV display system by overlaying the various data sets in different colors. In the Bearlodge area, this analysis revealed a pair of northwest-southeast tranding lineaments in the LANDSAT image which appeared to truncate a zone of high radioactivity. An elliptical feature formed by drainages is found. An intense thorium-gamma ray anomaly which coincides with thorium-rare earth mineralization, occurs inside this elliptical feature.

Magnetic profiles on individual satellites tracks were examined to identify bad (nonterrestrially-based) data points r profiles. Anomaly profiles for the same satellite track, but at different passes were compared for parallel tracks and for tracks that cross. The selected and processed data were plotted and contoured to develop a preliminary magnetic anomaly map. The map is similar in general morphology to NASA's Magsat global scalar anomaly map, but has more detail which is related to crustal properties. Efforts have begun to interpret the satellite magnetic anomalies in terms of crustal character. The correlation of magnetics with crustal petrology may have a much larger tectonic implication. Th possibility of there being an ultramafic lower crust along one zone as a consequence of a continental collision/subduction which helped form the midcontinent craton in Precambrian times is being investigated.

METHODOLOGY OF THE INTERPRETATION OF REMOTE SENSING DATA AND APPLICATIONS IN GEOMORPHOLOGY
Tania Maria Sausen and Evlyn Marcia Leao deM. Novo Aug. 1981 42 p refs In PORTUGUESE; ENGLISH summary
(INPE-2209-MD/007) Avail: NTIS HC A03/MF A01

Remote sensing techniques not only permit the acquisition, in a short time, of a large volume of information about phenomena occurring at the Earth's surface, but also provide a constant flux of data showing variations in spatial distribution patterns, which is of value in predicting and controlling geomorphological events. The use of aerial panchromatic, color, and multispectral photography is discussed as well as the interpretation of radar and thermal infrared imagery. Methods for interpreting multispectral imagery from LANDSAT are examined.

HEAT CAPACITY MAPPING MISSION (HCMM) PROGRAM: STUDY OF GEOLOGICAL STRUCTURE OF SICILY AND OTHER ITALIAN AREAS Final Report
Roberto Cassinis, Giovanni Lechi, Principal Investigators, Eugenio Zilioli, Alberto Marini, Pietro A. Brivio, and Nicola Tosi Aug. 1981 34 p refs Sponsored by NASA. Original contains imagery. Original imagery may be purchased from NASA Goddard Space Flight Center, (code 601), Greenbelt, Md. 20771. Domestic

users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A for Rockets and Satellites'. HCMM
(E82-10073; NASA-CR-165095; NAS 1.26:165095) Avail: NTIS HC A03/MF A01 CSCL 05B

The usefulness of thermal inertia mapping in discriminating geolithological units was investigated using Sardinia and the Gulf of Orosei as test sites. Software designed for LANDSAT data were modified and improved for HCMM tapes. A first attempt was made to compare the geological cross section, the topography, the IR radiance, and the thermal inertia along selected profiles of the test site. Thermal inertia profiles appear smoothed in comparison with the thermal radiance. The lowest apparent thermal inertia (ATI) was found on granitic and basaltic outcrops where their image is of sufficient extent, while ATI is higher on carbonatic and dolomitic or moist deposits. Almost every fault is marked by a jump of ATI, the interval being sometimes of the order of one pixel. This seems to demonstrate the ability of ATI to detect contacts or tectonically disturbed zones with a good resolution. It seems more difficult to measure the differences in ATI between homogeneous materials having different lithology. Ground surveys conducted and a simulation model of diurnal temperatures of rocks having different thermal inertia are discussed. A.R.H.

The feasibility of mapping intrusive rocks in polycyclic and polymetamorphic areas using the logic method for photointerpretation of LANDSAT and radar imagery was investigated. The resolution, scale and spectral characteristics of the imagery were considered. Spectral characteristics of the intrusive rock units mapped using image 100 were investigated. It was determined that identification of acidic and basic intrusive bodies and determination of their relationships with principal structural directions using the logic method was feasible. Tectonic compartments were subdivided into units according to their predominant lithographic types, ignoring stratigraphy. The principal directions of various foliations, faults, megafolds, and fractural systems were defined. Delineation of the boundaries of intrusive bodies mapped using the spectral characteristics of Image 100 imagery ws determined to be more accurate than visual analysis. A 1:500,000 scale map of intrusions in the areas studied was generated. J.D.H.

Heat capacity mapping mission images of about 80,000 sq km in northern California were qualitatively evaluated for usefulness in regional geologic investigations of structure and lithology. The thermal characteristics recorded vary among the several geomorphic provinces and depend chiefly on the topographic expression and vegetation cover. Identification of rock types, or groups of rock types, was most successfully carried out within the semiarid parts of the region; however, extensive features, such as faults, folds and volcanic fields could be delineated. Comparisons of seasonally obtained HCMM images are of limited value except in semiarid regions. Author

APPLICATION OF HCMM DATA TO REGIONAL GEOLOGIC ANALYSIS FOR MINERAL AND ENERGY RESOURCE EVALUATION Progress Report, Jun. - Aug. 1981
Kenneth Watson, Principal Investigator and Susanne H-Miller Aug. 1981 4 p Sponsored by NASA HCMM
(E82-10137; NASA-CR-168522; NAS 1.26:168522) Avail: NTIS HC A02/MF A01 CSCL 08G

Experimentation with several potentially promising techniques led to the selection of a fairly simple scheme for registration of data from the HCMM using an affine transformation. A method based solely on remote sensing was developed to estimate those meteorological effects which are required for thermal inertia mapping. It assumes that the atmospheric fluxes are spatially invariant and that the solar, sky and sensible heat fluxes can be approximated by a simple mathematical form. Coefficients are determined from least squares method by fitting observational data to the thermal model.

USE OF MAGSAT ANOMALY DATA FOR CRUSTAL STRUCTURE AND MINERAL RESOURCES IN THE US MIDCONTINENT Quarterly Report, period ending 30 Jun. 1981
Robert S. Carmichael, Principal Investigator 30 Jun. 1981 4 p ERTS
(Contract NAS5-26425)
(E82-10152; NASA-CR-168537; NAS 1.26:168537; QR-2) Avail: NTIS HC A02/MF A01 CSCL 08G

While the preliminary magnetic anomaly map for the centra midcontinent is only in the hand-drawn stage, it agrees in broad aspects with the preliminary global MAGSAT map provided by NASA. Because of data evaluation and finer scale averaging, there are more detailed features which hold promise for eventual geological/crustal interpretation. Some current analysis is directed at examining whether a map data feature such as an elongated anomaly or trend, which seems parallel to satellite data tracks, is likely of crustal origin or is an artifact of the data set. In: Conference on Weather Forecasting and Analysis, 8th, Denver, CO, June 10-13, 1980, Preprints. Boston, MA, American Meteorological Society, 1980, p. 150-155.

Two cases (Oct. 21-22 and Oct. 25-26, 1979) were chosen to illustrate the effect of poor numerical analyses and the ability of improving them using the resources available at the Pacific Weather Centre. It was found that without adequate alternative data sources the loss of Ocean Station PAPA data can have a detrimental effect on the Canadian Meteorological Centre (CMC) objective analysis over the Eastern Pacific. In periods of intense weather activity, without the anchoring effect of this data the uncorrected errors in the analyses may propagate westward to the coast causing the rejection of valid coastal radiosonde observations. However, the Pacific Weather Centre regional analyses can complement the CMC national analyses and partly offset the expected data void created by the loss of Ocean Station PAPA data in 1981. G.R.

M. Houghton, W. D. Morris, and E. A. Gurganus (NASA, Langley Research Center, Hampton, VA). *Journal of Geophysical Research,* vol. 87, Jan. 20, 1982, p. 441-446. 18 refs.

The effects of dissolved organic materials on turbid-water optical properties are assessed, by means of field measurements and laboratory simulations in which upwelled reflectance, attenuation, absorption, and backscatter spectral properties at wavelengths from 450 to 800 nm are examined in relation to water chemistry. The data show that dissolved organic materials decrease upwelled reflectance from turbid waters, and that the decrease in reflectance is a nonlinear function of concentration with the largest gradients at low carbon concentrations, depending on wavelength. Upwelled reflectance is found to be highly correlated with two backscatter-absorption parameters used in some optical models, which are nonlinear with dissolved organic material concentration change. A82-20447 * # **Structure and variability of the Alboran Sea frontal system.** R. E. Cheney (NASA, Goddard Space Flight Center, Greenbelt, MD) and R. A. Doblar (U.S. Navy, Naval Ocean Research and Development Activity, Bay St. Louis, MS). *Journal of Geophysical Research,* vol. 87, Jan. 20, 1982, p. 585-594. 8 refs. Navy-sponsored research.

A distinct oceanic front coinciding with the jet of incoming North Atlantic water, and an associated anticyclonic gyre in the western half of the basin, were observed during a ship and aircraft survey of the physical characteristics of the Alboran Sea in the western Mediterranean in October 1977. The front was confined to the upper 200 m and was a continuous feature, extending from the Strait of Gibraltar 500 km eastward to the prime meridian. It is noted that in ten days between two surveys, the center of the gyre shifted 50 km westward. This variability of the anticyclonic gyre may correspond to changes of North Atlantic inflow strength, as inferred by local wind and the average atmospheric pressure over the western Mediterranean. O.C.

A82-21917 * **SASS measurements of the Ku-band radar signature of the ocean.** L. C. Schroeder, W. L. Grantham (NASA, Langley Research Center, Hampton, VA), J. L. Mitchell, and J. L. Sweet (Kentron Technical Center, Hampton, VA). *IEEE Journal of Oceanic Engineering,* vol. OE-7, Jan. 1982, p. 3-14. 13 refs.

SeaSat-A Satellite Scatterometer (SASS) measurements of normalized radar cross section (NRCS) have been merged with high quality surface-wind fields based on in situ, to create a large data base of NRCS-wind signature data. These data are compared to the existing NRCS-wind model used by the SASS to infer winds. False-color maps of SASS NRCS and ocean winds from multiple orbits show important synoptic trends. (Author)

A82-21921 **Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere.** A. M. Shutko and A. G. Grankov (Akademiia Nauk SSSR, Institut Radiotekhniki i Elektroniki, Moscow, USSR). *IEEE Journal of Oceanic Engineering,* vol. OE-7, Jan. 1982, p. 40-43. 10 refs.

The use of multifrequency radiometers to determine certain emission properties of the sea surface is considered, as is the dependence of the radiometer on wind speed, atmospheric water vapor content, and liquid water content in clouds. Attention is given to the sea state influence on the radiative characteristics of the ocean-atmosphere system and to calibrating the data of range measurement. Also considered is the problem of choosing those spectral bands which provide optimum accuracy for determining geophysical parameters with due regard to the spectral peculiarities of the functional relationships between the radiophysical and geophysical parameters and their uncertainties. Data are presented on an experiment for determining different hydrometeorological conditions and estimating the accuracy of applied retrieval procedures. C.R.

A82-24061 * **The Seasat low rate data processing system.** J. W. Brown, J. C. Klose, and M. L. MacMedan (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: Oceans '80; International Forum on Ocean Engineering in the '80s, Seattle, WA, September 8-10, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 518-526. 6 refs. Contract No. NAS7-100.

The development of the algorithms for data processing and distribution, the circuitry, and the performance of the Seasat low rate data processing system are reviewed. The system controls data from the radar altimeter, scatterometer, microwave radiometer, and the visible and IR radiometer for independent transmission of each instrument's readings. The downlink operates at 25 kb/sec, and a yearlong program of geophysical evaluation proceeded shortly after launch, allowing on-line engineering evaluation and alteration of the control algorithms in the system. Some data is preformatted for immediate distribution and storage in archival quality. A catalog and abstracts are provided to users allowing a RAM search from remote terminals for historical conditions. Procedures for verifying and altering the algorithms are detailed. M.S.K.

A82-24063 * **Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry.** R. Hofer and E. G. Njoku (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: Oceans '80; International Forum on Ocean Engineering in the '80s, Seattle, WA, September 8-10, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1980, p. 531-534. Research supported by the National Academy of Sciences; Contract No. NAS7-100.

The Scanning Multichannel Microwave Radiometer aboard both the Seasat and Nimbus-7 satellites was designed to estimate sea surface temperature (SST) and wind speed (WS) over an extended range of atmospheric conditions. The retrieval technique is described briefly, and it is demonstrated in a case study that the instrument design goals (SST:1.5 C; WS:2 m/s) appear to be feasible. (Author)

A82-24822 **Workshop on the application of existing satellite data to the study of ocean surface energetics, 19-21 November 1980, University of Wisconsin-Madison.** C. Gautier (Wisconsin, University, Madison, WI) and D. McConnell (NOAA, National Climate Program Office, Rockville, MD). *American Meteorological Society, Bulletin,* vol. 62, Dec. 1981, p. 1679-1689.

A82-27091 * # **Topex orbit sustenance maneuver design.** J. A. Kechichian (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 20th, Orlando, FL, Jan. 11-14, 1982, Paper 82-0202.* 15 p. 6 refs. NASA-supported research.

A trade-off analysis between maneuver period, execution errors, and orbit determination uncertainties is carried out for the Ocean Topography Experiment spacecraft for a given nodal equatorial constraint. Semimajor axis and eccentricity are controlled with minimum impulse using the linear theory of optimal transfer between close coplanar near-circular orbits. Ellipses of equal minimum and average maneuver periods are presented in the (3 execution error, 3 orbit determination uncertainty) space for different nodal equatorial constraints enabling the determination of the appropriate combination of execution errors and orbit determination uncertainties that guarantees a mission required minimum maneuver period for a given nodal deadband. (Author)

A82-27596 * # **Optimal spatial filtering and transfer function for SAR ocean wave spectra.** A. D. Goldfinger, R. C. Beal, and D. G. Tilley (Johns Hopkins University, Laurel, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 291-297. 5 refs. NASA-supported research; Contract No. NOAA-MO-A01-78-00-4330.

The Seasat Synthetic Aperture Radar (SAR) has proved to be an instrument of great utility in the sensing of ocean conditions on a global scale. An analysis of oceanographic and atmospheric aspects of Seasat data has shown that the features observed in the imagery are linked to ocean phenomena such as storm sources and their resulting swell systems. However, there remains one central problem which has not been satisfactorily solved to date. This problem is related to the accurate measurement of wind-generated ocean wave spectra. Investigations addressing this problem are currently being conducted. The problem has two parts, including the accurate measurement of the image spectra and the inference of actual surface wave spectra from these measurements. A description is presented of the progress made towards solving the first part of the problem, taking into account a digital rather than optical computation of the image transforms. G.R.

A82-27602 # **Integrated sensor system for collection of wave data applied to coastal engineering design.** D. E. Lichy, T. L. Miloser, and D. W. Berg (U.S. Army, Coastal Engineering Research Center, Fort Belvoir, VA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 357-365. 11 refs.

Ocean wave climate is a primary consideration in the design of coastal structures. Wave data are a major parameter for use in longshore current and transport mathematical models. During October and November 1980, more than 30 organizations took part in the 56-day Atlantic Remote Sensing Land Ocean Experiment (ARSLOE) near Duck, North Carolina. A total of 47 wave measuring devices, in situ to remote sensing, were tested. This paper discusses the various considerations involved in designing an integrated system for the collection of ocean wave data, along with the limitations and advantages of the systems tested during ARSLOE and other field experiments. B.J.

A82-27608 # **The first ESA remote sensing satellite system ERS-1.** G. Duchossois and C. Honvalut (ESA, Directorate of Application Programmes, Paris and Toulouse, France). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 461-477.

The mission objectives of the ESA remote sensing satellite system ERS-1 is to develop applications related to a better knowledge of ocean parameters and sea-state conditions and to increase scientific understanding of coastal zones and global ocean processes. In particular, offshore activities, ship routing, physical oceanography and glaciology, climate research, and marine biology will be benefited. The main payload will consist of a C-band active microwave instrumentation, and ocean color monitor, and a radar altimeter. Launched by Ariane 2 or 3, the system will use the Multimission Platform developed in the framework of the French national SPOT program. The requirements and constraints for the ERS-1 mission include coverage, instrument duty cycles, stations network, processing levels/products, and ground segment concept. The development program is described. ERS-1 will be both an experimental and an operational system. C.D.

A82-27619 # **Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery.** M. E. Kirby and J. T. Sutton (INTERA Environmental Consultants, Ltd., Ottawa, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 563-575. 6 refs.

In connection with programs related to the exploration and development of sources of petroleum in remote offshore regions of the high Arctic, the presence of sea ice has usually a significant effect on the activities involved in the implementation of such a program. In anticipation of year-round operations, models have been developed which calculate the predicted performance levels of ships and drill rigs under various design characteristics and ice conditions. These models are very dependent on historical ridge data sets. The method most widely used in the acquisition of ice ridge statistics involves the analysis of laser profilometer data. However, a detailed validation test of the laser profilometer method has not been conducted. The present investigation has the objective to compare airborne laser profilometer data of sea ice with measurements taken on the ice. A close positive correlation between radar brightness and ridge density could be observed. G.R.

A82-27620 # **A method for the retrieval of phytoplankton and suspended sediment concentrations from remote measurements of water colour.** S. Tassan (Commission of the European Communities, Joint Research Centre, Ispra, Italy). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 577-586. 19 refs.

A82-27640 # **High precision radiometric temperature measurements of the ocean surface.** K. Peacock, R. F. Gasparovic, and L. D. Tubbs (Johns Hopkins University, Laurel, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 793-802.

Characteristics of a unique imaging radiometer used to make measurements over areas of the North Atlantic at infrared wavelengths are described. Examples are presented of the surface temperature spatial variation, the radiometric temperature variation with viewing angle, atmospheric effects, influence of scattered clouds, and the wavenumber variance spectrum. The radiometric environment typically encountered is discussed. It is shown that the capabilities of the radiometer permit the obtaining of precise radiance data for estimating corrections necessary for extracting accurate sea surface temperatures. D.L.G.

A82-27674 # **A formation process of an oceanic vortex analyzed by multi-temporal remote sensing.** Y. Hatakeyama (Asia Air Survey Co., Ltd., Tokyo, Japan), S. Tanaka (Remote Sensing Technology Center of Japan, Tokyo, Japan), and T. Nishimura (Tokyo Science University, Noda, Japan). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1173-1186. 6 refs.

Investigations of the flow characteristics in the coastal seas of Japan are required in connection with water-quality problems related to rapid urbanization or industrialization. The present study is concerned with an observation of the dynamic aspects of an interaction between the Kuroshio current and coastal water in October 1979, after Typhoon-20 had passed through Japan. The observational data were obtained with the aid of a multitemporal remote sensing method. A vortex at the mouth of Suruga Bay was detected on the basis of the fluid-mechanical interpretation of the data. Attention is given to the marine background of the site, an analysis of temporal static aspects of the vortex with the aid of Landsat data, the analysis of dynamic vortex processes, and approaches for observing a vortex with the aid of remote-sensing data. G.R.

A82-27684 # **Response of the marine community to satellite-derived oceanic information.** N. J. Hooper (Metrics, Inc., Atlanta, GA) and J. W. Sherman, III (NOAA, National Earth Satellite Service, Washington, DC). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1285-1295. 8 refs.

The present investigation has the objective to merge the marine data requirements identified at the NOAA Workshop on Oceanic Remote Sensing with those reflected by the response of the marine community to the National Oceanic Satellite System (NOSS) Conference Worksheets. The result of such an effort provides a summary of the civil marine community's oceanic remote sensing data requirements as they are currently understood. Oceanic remote sensing had been defined as being restricted to the use of electromagnetic energy to observe or measure properties of the ocean while remotely located from that portion of the ocean being observed. G.R.

A82-28031 # **Estimation of sea surface temperature from remote sensing in the 3.7 micron window region.** T. Takashima and Y. Takayama (Meteorological Research Institute, Tsukuba, Ibaraki, Japan). *Meteorological Society of Japan, Journal,* vol. 59, Dec. 1981, p. 876-891. 16 refs.

Temperature measurement deviation in satellite remote sensing during day and night is considered. Atmospheric gases are taken as absorbent constituents and aerosols as scatterers in an atmosphere-ocean model. The solar input is chosen at 1.94 cal/min at the surface, and a standard atmosphere is assumed. Optical thickness calculations for the 3.7 micron band include the effects of water vapor lines and continua, the collision-induced N2 band near 4 microns, and mixed gases. The atmosphere is characterized by nine layers, each with 14 homogeneous sublayers. Optical thicknesses are calculated over the 9 layers, averaged and weighted by the NOAA-6 filter response. The refractive index is also calculated, and the surface is treated as a specular reflector. Except for sun glint, deviations in observed to measured temperatures were less in the day than at night. Greater than 50 deg differences were detected in the specular direction, and were correctable by simulation. The surface wind speeds are required in order to correct for sun glint. M.S.K.

COHERENT SCATTER OF MICROWAVES FROM MODERATELY ROUGH SURFACES

M. M. Weiner and G. A. Robertshaw Aug. 1981 33 p refs
(Contract F19628-81-C-0001; AF Proj. 4290)
(AD-A106133; MTR-8299) Avail: NTIS HC A03/MF A01 CSCL 20/14

An improved model is reported for the effect of surface roughness on coherent scatter of microwaves from moderately rough terrain and sea surfaces. This model gives agreement with microwave and acoustical experimental data for surface height standard deviations as much as 400% larger than for a widely accepted model discussed by Beckmann and other investigators. The improved agreement with data is achieved by assuming a symmetrical exponential probability density of the surface height random variable. This model lends itself to an interesting physical interpretation of the stochastic process associated with the surface profile. Author (GRA)

AN OPTICAL MODEL FOR THE MICROWAVE PROPERTIES OF SEA ICE

P. Gloersen and J. K. Larabee Nov. 1981 28 p refs Submitted for publication
(NASA-TM-83865) Avail: NTIS HC A03/MF A01 CSCL 08L

The complex refractive index of sea ice is modeled and used to predict the microwave signatures of various sea ice types. Results are shown to correspond well with the observed values of the complex index inferred from dielectic constant and dielectric loss measurements performed in the field, and with observed microwave signatures of sea ice. The success of this modeling procedure vis a vis modeling of the dielectric properties of sea ice constituents used earlier by several others is explained. Multiple layer radiative transfer calculations are used to predict the microwave properties of first-year sea ice with and without snow, and multiyear sea ice. Author

SATELLITE-DERIVED ICE DATA SETS NO. 1: ANTARCTIC MONTHLY AVERAGE MICROWAVE BRIGHTNESS TEMPERATURES AND SEA-ICE CONCENTRATIONS, 1973 - 1976
H. J. Zwally Nov. 1981 35 p refs Submitted for publication
(NASA-TM-83812) Avail: NTIS HC A03/MF A01 CSCL 08L

A summary data set concerning 4 years of Antarctic sea-ice conditions was created and is available on magnetic tape. The data were derived from electrically scanning microwave radiometer brightness temperatures and were mapped into a polar stereographic grid enclosing the 50 deg S latitude circle. The grid size varies from about 32 by 32 sq km at the poles to about 28 by 28 sq km at 50 deg S. The microwave brightness temperatures of Antarctic sea ice are predominantly characteristic of first-year ice with an emissivity of 0.92 at 19 GHz frequency. Sea ice concentrations were calculated from the brightness temperature data for each grid element with an algorithm that uses an emissivity value of 0.92 and an ice physical temperature estimate from climatological surface air temperatures. Monthly, multiyear monthly, and yearly maps of brightness temperatures and sea ice concentrations were created for the 4 years, except for 7 months for which useable data were insufficient. Author

THE RELATIONSHIP AMONG SEA SURFACE ROUGHNESS VARIATIONS, OCEANOGRAPHIC ANALYSES, AND AIRBORNE REMOTE SENSING ANALYSES Final Report, 16 May - 31 Oct. 1981
George F. Oertel and Terry L. Wade Dec. 1981 252 p refs
(Grant NAG1-189)
(NASA-CR-168444; TR-81-2) Avail: NTIS HC A12/MF A01 CSCL 08C

The synthetic aperture radar (SAR) was studied to determine whether it could image large scale estuaries and oceanic features such as fronts and to explain the electromagnetic interaction between SAR and the individual surface front features. Fronts were observed to occur at the entrance to the Chesapeake Bay. The airborne measurements consisted of data collection by SAR onboard an F-4 aircraft and real aperture side looking radar (SLAR) in Mohawk aircraft. A total of 89 transects were flown. Surface roughness and color as well as temperature and salinity were evaluated. Cross-frontal surveys were made. Frontal shear and convergence flow were obtained. Surface active organic materials, it was indicated, are present at the air-sea interface. In all, 2000 analyses were conducted to characterize the spatial and temporal variabilities associated with water mass boundaries. N.W.

SEA STATE MEASUREMENT WITH A TWO FREQUENCY SCATTEROMETER (THEORY)
Michael Kleintz Dec. 1981 177 p refs Transl. into ENGLISH of "Seegangsbestimmung mit dem Zweifrequenz-Scatterometer (Theoretische Grundlagen)" Rept. DFVLR-FB-80-32 Oberpfaffenhofen, West Germany, May 1980 Original report in GERMAN previously announced as N81-22675
(ESA-TT-710; DFVLR-FB-80-32) Avail: NTIS HC A09/MF A01; DFVLR, Cologne DM 31,20

In the context of the Spacelab program, sea state measurements with a two frequency scatterometer are considered. A system analysis of two frequency scatterometry, especially signal analysis for stationary and airborne (aircraft; satellite) measurements, is presented, and an unambiguous method for wind direction determination is given. A statistical model of sea state, based on the frequency spectrum of the water wave height distribution, is used. The radar echo from the sea surface is characterized for a monochromatic ouptut signal. An autocorrelation function is developed, and application in consideration of the Doppler spectrum of the sea surface reflectance function is shown. Author (ESA)

RECOVERING OCEAN WAVEHEIGHT FROM HF RADAR SEA ECHOES DISTORTED BY IMPERFECT IONOSPHERIC REFLECTION
T. M. Georges, J. W. Maresca, C. T. Carlson, J. P. Riley, R. M. Jones, and D. E. Westover May 1981 156 p refs
(PB82-113283; NOAA-TM-ERL-WPL-73; NOAA-81081301) Avail: NTIS HC A08/MF A01 CSCL 08C

A real-time signal processing package to collect high-quality sea-echo Doppler spectra under many different ionospheric conditions found in nature was developed. Graphical displays and objective quality indices help the radar operator sort undistorted spectra from those distorted by imperfect ionospheric reflection, so that ocean wave height can be reliably estimated while the data are being collected. The package can be used either off-line on archival data or for on-line adaptive processing of radar data as part of an ocean-scanning strategy. Author (GRA)

SEASAT DATA UTILIZATION PROJECT Final Report

G. H. Born, D. N. Held, D. B. Lame, R. G. Lipes, D. R. Montgomery, P. J. Rygh, and J. F. Scott 30 Sep. 1981 62 p refs

(NASA-CR-168557; Rept-622-233) Avail: NTIS HC A04/MF A01 CSCL 05B

During the three months of orbital operations, the satellite returned data from the world's oceans. Dozens of tropical storms, hurricanes and typhoons were observed, and two planned major intensive surface truth experiments were conducted. The utility of the Seasat-A microwave sensors as oceanographic tools was determined. Sensor and geophysical evaluations are discussed, including surface observations, and evaluation summaries of an altimeter, a scatterometer, a scanning multichannel microwave radiometer, a synthetic aperture radar, and a visible and infrared radiometer. N.W.

The spatial structure of the sea ice velocity field determines ridging, open water production and ice stress. The velocity has been measured roughly every 2 km along an 865 km track from SEASAT synthetic aperture radar. The movement shows individual pieces as large as 100 km. The spatial autocorrelation function of velocity has been estimated from these data and FGGE and AIDJEX buoy data, and has a length scale of roughly 1000 km. A model of the movement of a set of pieces shows the large uncertainty in opening and ridging estimated from velocities measured at only three points. Author (GRA)

PRELIMINARY RESULTS OF A STUDY OF MAPPING THERMAL DISCHARGE IN THE OCEAN, USING REMOTE SENSING DATA

Merritt Raymond Stevenson, Carlos Alberto Steffen, and Hector Manual Inostroza Villagra Sep. 1981 23 p refs In PORTUGUESE; ENGLISH summary Presented at 33d Ann. Meeting of SBPC, Salvador, 8-15 Jul. 1981

(INPE-2229-PRE/021) Avail: NTIS HC A02/MF A01

The spatial and temporal variations of the sea surface temperature, utilizing data obtained from sea surface, aircraft and satellite platforms were studied. The objective of the study is the evaluation and mapping of small scale variations in the sea surface temperature, caused by the thermal discharge from a nuclear power plant at Angra dos Reis, Brazil. Evaluation of data from ANGRA 01, the first experiment made on December 19, 1980, showed the surface temperature to be quite isothermal. Temperature from the aircraft and satellite radiometers were about 0.6 C and 5.0 C cooler, respectively, than the temperatures measured from the boat. These thermal offsets are readily accounted for by differences in emissivities of the sea surface and the intervening water vapor in the lower atmosphere.Author

CONVERGENCE ZONES IN THE SOUTH ATLANTIC AND THEIR INFLUENCE ON THE PRECIPITATION REGIME IN NORTHEASTERN BRAZIL M.S. Thesis [ZONAS DE CONVERGENCIA NO ATLANTICO SUL E SUAS INFLUENCIAS NO REGIME DE PRECIPITACAO NO NORDESTE DO BRASIL]

Lucimar Luciano deOliveira Jan. 1982 125 p refs In PORTUGUESE; ENGLISH summary

(INPE-2307-TDL/074) Avail: NTIS HC A06/MF A01

The relationship between the convergence zones in the South Atlantic and the rainfall variability on Northeast Brazil was studied. Radiosonde data from the Posto Oceanografico da Ilha da Trindade, wind charts from the National Meteorological Center, USA, precipitation data of selected coastal stations and satellite imagery were utilized. Monthly and half-yearly brightness charts were constructed from such satellite imagery between the parallels of 10 degrees N and 55 degrees S and the meridians of 010 degrees E and 080 degrees W, for a dry and a rainy year. The results reveal that dry years correspond to the permanence of the Spring pattern of interaction between the intertropical convergence zone and the South Atlantic convergence zones, the Bolivian high (in 200 mb) being more developed; in such dry years a stronger and more regular Walker circulation seems to be present. ESTIMATING OCEAN-AIR HEAT FLUXES DURING COLD AIR OUTBREAKS BY SATELLITE

Shu-Hsien Chou and David Atlas Nov. 1981 52 p refs Submitted for publication Original contains color illustrations

(NASA-TM-83854) Avail: NTIS HC A04/MF A01 CSCL 04B

Nomograms of mean column heating due to surface sensible and latent heat fluxes were developed. Mean sensible heating of the cloud free region is related to the cloud free path (CFP, the distance from the shore to the first cloud formation) and the difference between land air and sea surface temperatures, theta sub 1 and theta sub 0, respectively. Mean latent heating is related to the CFP and the difference between land air and sea surface humidities q sub 1 and q sub 0 respectively. Results are also applicable to any path within the cloud free region. Corresponding heat fluxes may be obtained by multiplying the mean heating by the mean wind speed in the boundary layer. The sensible heating estimated by the present method is found to be in good agreement with that computed from the bulk transfer formula. The sensitivity of the solutions to the variations in the initial coastal soundings and large scale subsidence is also investigated. The results are not sensitive to divergence but are affected by the initial lapse rate of potential temperature; the greater the stability, the smaller the heating, other things being equal. Unless one knows the lapse rate at the shore, this requires another independent measurement. For this purpose the downwind slope of the square of the boundary layer height is used, the mean value of which is also directly proportional to the mean sensible heating. The height of the boundary layer should be measurable by future spaceborn lidar systems. B.W.

AN AERIAL SURVEY OF WATER TURBIDITY AND LASER DEPTH SOUNDING PERFORMANCE ALONG THE QUEENSLAND COAST
D. M. Phillips and R. H. Abbot Apr. 1981 29 p refs
(AD-A109050; ERL-0192-TR) Avail: NTIS HC A03/MF A01 CSCL 08/10

The performance of the WRELADS laser airborne depth sounder has been assessed in North Queensland coastal waters from Townsville to Torres Strait. This was achieved by recording water turbidity and maximum sounding depth in the aircraft along the flight path. The parameter used in the aerial survey as a measure of water turbidity was related to beam attenuation coefficient measured from a boat in a joint aircraft and boat trial. Data relating the statistical distribution of turbidity to water depth were obtained and compared with the observed performance characteristic in order to indicate the proportion of Queensland coastal waters suitable for sounding with an airborne laser sounder. Mesoscale biological patterns and processes in productive coastal waters were studied. The physical and biological processes leading to chlorophyll variability were investigated. The ecological and evolutionary significance of this variability, and its relation to the prediction of fish recruitment and marine mammal distributions was studied. Seasonal primary productivity (using chlorophyll as an indication of phytoplankton biomass) for the entire Southern California Bight region was assessed. Complementary and contemporaneous ship and satellite (Nimbus 7-CZCS) bio-optical data from the Southern California Bight and surrounding waters were obtained and analyzed. These data were also utilized for the development of multi-platform sampling strategies and the optimization of algorithms for the estimation of phytoplankton biomass and primary production from satellite imagery. INTERACTION BETWEEN THE AGULHAS CURRENT AND THE SUBTROPICAL CONVERGENCE
J. R. E. Lutjeharms Feb. 1981 42 p refs Presented at the 4th Natl. Oceanographic Symp., Cape Town, 10-13 Jul. 1979
(CSIR-RR-384) Avail: NTIS HC A03/MF A01

The Agulhas Current which loses its essential character as a western boundary current south of South Africa is discussed. This ocean area is known as an area of dramatic dynamical variability. To investigate this variability, and the mechanisms responsible, a number of satellite products covering a period of over two years were studied. A number of dynamical phenomena were observed and are described. These include the genesis and growth of sheer edge eddies on the landward border of the current, the nature and location of the Agulhas retroflection region, the formation of Agulhas rings in the south-east Atlantic Ocean, and the nature and variability of planetary waves in the subtropical convergence. The possible interaction between these features of the circulation is discussed in so far as the limited data allow this, and a conceptual image of the macroscale current dynamics in the area is presented. SURFACE WAVE STATISTICS AND SPECTRA DURING HIGH SEA STATE CONDITIONS IN THE NORTH ATLANTIC
C. R. McClain, D. T. Chen, and W. D. Hart 30 Dec. 1981 33 p refs
(RR0320841; WF59553000)
(AD-A109832; NRL-MR-4722) Avail: NTIS HC A03/MF A01 CSCL 08/3

Surface wave data collected using an airborne laser profilometer during high sea state conditions are analyzed to produce statistical cumulants up to the fifth order and power spectra. Theoretically, the third cumulant, skewness, is directly proportional to the wind-wave significant slope. This relationship is supported by wind-wave tank data, but little field data of this kind is available in the literature. Also, it has been suggested that if skewness can be derived from radar altimeter data, the significant slope would be computed and together with another altimeter product, the rms wave height, the wave spectra can be estimated using the Wallops Spectral Model (WSM). The results of this study indicate that the skewness relationship is valid for wind-wave dominated seas but as the swell contribution to rms wave height increases, the combined wave field skewness monotonically decreases below the predicted value. The WSM yields excellent reproductions of the wind-wave spectra even in multiple-peaked seas providing that the model inputs are properly determined for the wind-wave subfield. Finally the altimeter-WSM scheme should work reasonably well when the seas are wind-wave dominated provided that the altimeter can accurately measure skewness. More research on intermediate and swell dominated conditions is recommended. Author (GRA)

HYDROLOGY AND WATER MANAGEMENT

Includes snow cover and water runoff in rivers and glaciers, saline intrusion, drainage analysis, geomorphology of river basins, land uses, and estuarine studies.

A82-19559 # **Microwave radiation from a natural snow field.** M. Tiuri and H. Schultz (Helsinki University of Technology, Esbo, Finland). In: European Microwave Conference, 10th, Warsaw, Poland, September 8-12, 1980, Proceedings.
Sevenoaks, Kent, England, Microwave Exhibitions and Publishers, Ltd., 1981, p. 574-578. 5 refs.

The brightness temperature of a natural snow field in Finland has been studied theoretically and experimentally at 5, 12 and 37 GHz for satellite remote sensing applications. A snow model consisting of ice spheres covered by a water shell has been used in theoretical calculations taking into account scattering and absorption. The brightness temperature of a natural snow field as a function of view angle has been measured from a tower in 1978 and 1979. The measured brightness temperature curves can be fitted with calculated ones by assuming reasonable values for the wetness and the particle size of snow. Experimental results also show that relatively small changes in the snow conditions cause large changes in the brightness temperature. (Author)

A82-19831 † **A photometric method for depth determination by aerial photography (O fotometricheskom sposobe opredeleniia glubin po aerofotosnimku).** E. S. Zubchenko and V. D. Kondiurin. *Geodeziia i Kartografiia*, Nov. 1981, p. 47-49. In Russian.

A modified photometric method for the determination of water depth based on an exponential approximation of the dependence of the brightness recorded by an aerial photograph on the depth is presented. The formulas employed calculate depth from measurements of the luminous flux having passed through the image, as well as the optical density of the image, so that it is not necessary to measure signals on portions of the photograph with optically infinite depths. Evaluation of the accuracy of the photometric method by comparison with results of sonic depth sounder measurements for a coastal region has shown it to be accurate to within 0.25 m rms for depths between 0.5 and 11.8 m, representing a significant improvement in accuracy. The method is thus recommended for use in bottom relief mapping in coastal shelf regions. A.L.W.

A82-20343 † **Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography (Izuchenie dinamiki regional'nogo podzemnogo stoka basseina Aral'skogo moria s ispol'zovaniem s'emki iz kosmosa).** N. S. Semina (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Gidrogeologii i Inzhenernoi Geologii, Moscow, USSR). *Issledovanie Zemli iz Kosmosa*, Nov.-Dec. 1981, p. 41-47. 6 refs. In Russian.

A82-21922 **Optical properties of snow.** S. G. Warren (Cooperative Institute for Research in Environmental Sciences, Boulder, CO). *Reviews of Geophysics and Space Physics*, vol. 20, Feb. 1982, p. 67-89. 99 refs. NSF Grant No. ATM-80-24641.

The reflection, absorption and transmission of light in the solar and infrared regions by snow are reviewed in light of the importance of optical properties in radiation budget and remote sensing studies. Measurements of snow albedo, bidirectional reflectance, flux extinction and intensity extinction are discussed, and the development of modeling of snow optical properties is outlined. Consideration is then given to the effects of snow grain size, liquid water content and impurities on snow albedo, and to spectrally integrated and spectral flux extinction in the transmission of light through snow. The dependence of snow and spectrally integrated planetary albedos on sun angle is examined, and effects of cloud cover are noted. A complete description of the bidirectional reflectance of snow is presented for use in satellite measurements, and the azimuthally averaged reflectance is supplied for flux calculations. Attention is also given to the thermal infrared emissivity and brightness temperature properties of snow and to the remote sensing of snow parameters based on solar infrared and microwave spectra. A.L.W.

A82-22145 **Use of GOES and TIROS/NOAA satellite data for snow-cover mapping.** T. M. Lillesand, D. E. Meisner, A. LaMois Downs, and R. L. Deuell (Minnesota, University, St. Paul, MN). *(American Society of Photogrammetry, Annual Convention, Washington, DC, Feb. 22-27, 1981.) Photogrammetric Engineering and Remote Sensing*, vol. 48, Feb. 1982, p. 251-259. 14 refs. Research supported by the University of Minnesota; Grant No. NOAA-NA-80AAD0019.

Using Minnesota as a test area, a study was conducted to evaluate the imaging characteristics of snow in open agricultural areas, under heavily forested conditions, and in zones of transition between the two cover types. Both GOES and NOAA/TIROS data were analyzed and both visual and digital data analysis techniques were employed. Satellite and ground-based snow survey data were compared for the winters of 1978-79 and 1979-80. Attention is given to aspects of data acquisition, visual image interpretation, and digital data analysis. It was found that visual interpretation of snow extent in nonforested regions would provide very useful input to the snow mapping techniques currently used in Minnesota. The satellite data provide an improved portrayal of the spatial distribution of snow when used in conjunction with ground data. GOES images were found to be more useful than TIROS/NOAA images. G.R.

A82-22873 **The use of satellite data in rainfall monitoring.** E. C. Barrett (Bristol, University, Bristol, England) and D. W. Martin (Madison, University, Madison, WI). London and New York, Academic Press, 1981. 350 p. 310 refs. $57.

Applications, limitations, and prospectives for future improvements in satellite data gathering for rainfall hydrometeorology are examined. Basic parameters of rainfall amenable to satellite observation are reviewed, along with existing satellites and systems for rainfall observations. Specific attention is given to observation methods such as preliminary studies, cloud-indexing, life-histories, bi-spectral and cloud model methods, rainfall detection from visible and IR images, and properties of microwave radiation in the atmosphere. Satellite rainfall monitoring applications are explored in terms of rainfall inventories on macro- and mesoscales, and for use in hydrology, for studying floods, droughts, and plagues, and for monitoring crop growth and production. Finally, future prospects are discussed for active microwave systems and integrated and international programs for rainfall monitoring. M.S.K.

A82-24959 **Change detection in the Peace-Athabasca Delta using digital Landsat data.** G. M. Wickware (Canada Centre for Inland Waters, Burlington, Ontario, Canada) and P. J. Howarth (McMaster University, Hamilton, Ontario, Canada). *Remote Sensing of Environment*, vol. 11, Mar. 1981, p. 9-25. 21 refs. Research supported by Parks Canada and Natural Sciences and Engineering Research Council of Canada.

The extensive Peace-Athabasca Delta has experienced major changes in water boundaries and vegetation types due to flooding. To determine the feasibility of Landsat digital data to monitor such changes, comparisons of parts of the delta under normal and flooded conditions have been made. The analysis involved supervised classification of the digital data on two dates followed by post-classification change detection. Comparison of the digital analysis results with aerial photography and existing maps showed good classification accuracy, although a considerable number of pixels remained unclassified. Change detection involved registration of the images on the Image 100 monitor followed by class comparison on a pixel-by-pixel basis. This demonstrated not only that changes had occurred, but also the nature of the changes. Evaluation of the original reflectance values for each class helped in the explanation of the known water and vegetational changes. Results of the study indicate that this type of wetland environment can be effectively mapped and changes readily determined using digital Landsat data. Care must be taken, however, in the analysis of statistical information generated on a pixel-by-pixel basis, particularly for linear features where there are frequent boundaries between classes. (Author)

06 HYDROLOGY AND WATER MANAGEMENT

A82-24960 * **Spectral reflectance of hydrophytes.** R. G. Best, M. E. Wehde, and R. L. Linder (South Dakota State University, Brookings, SD). *Remote Sensing of Environment,* vol. 11, Mar. 1981, p. 27-35. 9 refs. Research supported by the South Dakota State University, South Dakota Department of Game, Fish and Parks, and U.S. Fish and Wildlife Service; Grant No. NGL-42-003-007.

Identification of hydrophytes will improve the delineation and classification of wetlands on remotely sensed imagery. Spectral reflectance measurements of 10 species of hydrophytes were made with an Exotech radiometer during three phenological stages, flowering and early seed, senescent, and early emergent. Reflectance data were analyzed to determine significant (P not greater than 0.5) differences between species in each of four spectral regions during each phenological stage. Eight species had significantly (P not greater than 0.05) different reflectances during the flower and early seed stage. Among the ten species only one could not be spectrally isolated during at least 1 phenological stage. The results indicate that films sensitive to both visible and infrared spectra (e.g., Ektachrome infrared) should enable recognition of different species of hydrophytes. (Author)

A82-26838 **Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India.** R. P. Gupta and J. Bodechtel (Zentralstelle für Geo-Photogrammetrie und Fernerkundung, Munich, West Germany). *Remote Sensing of Environment,* vol. 12, Mar. 1982, p. 3-13. 16 refs.

Repetitive coverages of Landsat MSS images over Bhakra Dam Reservoir, India, are analyzed and processed on an optical-analog processing device for feature enhancement. The investigations are made with respect to the geological-structural set-up of the area, reservoir lake monitoring, and silting hazards in the reservoir, with emphasis on the importance of remote sensing in water resources management. A lineament-tectonic map of the area is prepared, and temporal variations in the lake reservoir are mapped from the images, the accuracy of which can be improved through digital processing. A method for volumetric estimation of stored water from the Landsat data is proposed. D.L.G.

A82-26839 * **Remote sensing of salinity in the San Francisco Bay Delta.** S. Khorram (California, University, Berkeley, CA; North Carolina State University, Raleigh, NC). *Remote Sensing of Environment,* vol. 12, Mar. 1982, p. 15-22. 32 refs. Research supported by the University of California; Grant No. NsG-5256.

Landsat multispectral scanner data and color and color infrared photographs acquired from a U-2 aircraft are combined with surface measurements for salinity mapping of the San Fransisco Bay Delta. A regression model is developed between the surface truth data and Landsat digital data for 29 sample sites, and is then extended over the entire study area. Results are in general agreement with reported salinity distribution values. It appears to be impossible to establish any quantitative judgement regarding the salinity values by visual interpretation of the imagery within the test site. D.L.G.

A82-27457 **Aerospace methods for the study of water resources and their pollution (Aerokosmicheskie metody pri issledovanii vodnykh resursov i ikh zagriazneniia).** Edited by V. V. Kupriianov and V. F. Usachev. Leningrad, Gidrometeoizdat (Gosudarstvennyi Gidrologicheskii Institut, Trudy, No. 285, 1981. 152 p. In Russian.

Papers are presented on such topics as the use of satellite remote sensing data to study meltage runoff in mountain basins, the investigation of the dynamics of snow cover, the use of satellite multispectral photography to study snow meltage fronts, and the evaluation of the pollution of snow cover in industrial regions on the basis of remote sensing data. Also considered are the determination of the albedo and brightness coefficients of snow cover, the use of remote sensing to study subsurface water and tectonic structures, the investigation of the thermal pollution of rivers on the basis of infrared aerial photography, remote sensing methods for monitoring water quality, and microwave sensing methods for the investigation of water resources and their pollution. B.J.

A82-27458 † **The possibilities of microwave remote sensing for the study of water resources and their pollution (Vozmozhnosti mikrovolnovoi distantsionnoi indikatsii dlia izucheniia vodnykh resursov i ikh zagriazneniia).** K. Ia. Kondrat'ev, Iu. I. Rabinovich, and E. M. Shul'gina. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 5-12. 7 refs. In Russian.

The application of microwave remote sensing to the following hydrological tasks is considered: (1) the mapping of water bodies and ice formations on these bodies; (2) the determination of soil moisture; (3) the evaluation of certain types of water-surface pollution; and (4) the sensing of precipitation zones. It is shown that the use of microwave sensing and active radar techniques in hydrological studies will provide important information on the state of the atmosphere and the underlying surfaces. B.J.

A82-27459 † **Remote-sensing functions in the interpretation of moisture from aerial and space images (Indikatsionnye funktsii pri deshifrirovanii uvlazhneniia po aerokosmicheskim izobrazheniiam).** B. V. Vinogradov. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 13-24. 17 refs. In Russian.

A remote-sensing function is a quantitative description of data transformations in the transition from the object under study to the remote image of the object. A remote-sensing function is determined by analytic functional relationships, modulation transfer functions, or statistical analysis. A complete remote-sensing function contains a number of data-transmission units: instrumental, atmospheric, botanical, soil-related, hydrological, and geological. Several different remote-sensing functions are examined, and approximating equations are obtained for geophysical, botanical, soil functions for soil moisture and ground water. B.J.

A82-27460 † **Remote-sensing determination of the characteristics of hydrological objects (Opredelenie kharakteristik gidrologicheskikh ob'ektov distantsionnym metodom).** G. Tovizi. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 25-28. In Russian.

Remote sensing studies of water resources in Hungary are described. Most favorable spectral regions have been established for shorelines (0.8-0.9 micron), bottoms (0.45-0.65 micron), geological and tectonic formations (0.6-1.1 micron), and snow and ice cover (0.5-0.7 micron). The use of aerial photography to study water turbidity, silt formation in reservoirs, water flow rate and temperature, and surface pollution of water is discussed. Spectral regions most suitable for the study of these characteristics are indicated. B.J.

A82-27461 † **Application of satellite data to analyze and predict meltage runoff in a mountain basin (Primenenie sputnikovoi informatsii dlia rascheta i prognoza talogo stoka v gornom basseine).** N. V. Vostriakova. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 29-37. 9 refs. In Russian.

The use of satellite remote sensing images to analyze and predict meltage runoff during spring and summer periods is examined using the basins of the Sayan-Altai river system as an example. The following relationships are examined: (1) the dependence of changes in basin snow cover on the sum of positive values of air temperature; (2) the relationship between the rate of rise of the snow line and the water content during the high-water period; (3) the dependence of runoff volume on the area of snow meltage and the heat influx to the remaining high-water period on the size of the snow-covered area of the basin. The need to use multispectral imagery to study mountain river runoff is emphasized. B.J.

A82-27462 † **Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs (Dinamika snezhnogo pokrova v gornykh raionakh basseina Aral'skogo Moria po sputnikovym snimkam).** M. V. Sitnikova, B. K. Tsarev, and V. Iu. Chernov. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 38-44. 8 refs. In Russian.

A82-27463 † **The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ (O vozmozhnosti opredeleniia fronta snegotaianiia po mnogozonal'noi informatsii s ISZ 'Meteor' /na primere Kazakhstana/).** E. I. Pankratova. In: Aerospace methods for

the study of water resources and their pollution.
Leningrad, Gidrometeoizdat, 1981, p. 47-55. 5 refs. In Russian.

A82-27464 † Evaluation of snow-cover pollution in industrial regions using satellite TV images (Otsenka zagriaznennosti snezhnogo pokrova promyshlennykh raionov po sputnikovym TV izobrazheniiam). V. N. Vasilenko, V. G. Prokacheva, and Sh. D. Fridman. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 56-63. In Russian.

A subsatellite experiment was conducted in the spring of 1978 to investigate the pollution of snow cover in the Vorkuta industrial center of the USSR; Meteor-satellite TV images were interpreted. In addition, ground-based measurements of albedo, snow height and density, and dust concentrations in the snow cover were carried out along with aerial visual and photographic observations over an area of about 2500 sq km. Preliminary relationships were obtained between albedo, dust density in the snow, and the brightness of the snow cover on satellite images. B.J.

A82-27465 † Albedo and brightness coefficients of snow cover (Ob al'bedo i koeffitsientakh iarkosti snezhnogo pokrova). V. F. Usachev, V. A. Mikhailov, and V. G. Prokacheva. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 64-69. In Russian.

Parallel measurements of integral albedo (0.3-2.4 microns) and spectral brightness coefficients (420, 525, 622, and 787 nm) of snow cover were carried out near the city of Monchegorsk during the period of snow meltage. The albedo was measured by the M-60 field albedometer, while the spectral brightness coefficients were measured photoelectrically using a four-channel spectrophotometer. The field measurements (64 series) showed that the relationship between the integral albedo and the spectral brightness coefficients is quasi-linear. The use of satellite TV imagery to determine the brightness of snow cover is considered. B.J.

A82-27467 † Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs (Issledovanie i kartografirovanie melkovodnykh akvatorii i raspredeleniia tverdogo stoka rek po mnogozonal'nym aerokosmicheskim snimkam). Iu. F. Knizhnikov, V. I. Kravtsova, and I. A. Labutina. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 77-84. In Russian

Shallow areas of the northeastern Caspian were mapped using multispectral photographs from Soyuz-22. Geomorphological, bathymetric, relief, bottom-deposit, underwater-vegetation, and underwater-landscape maps were compiled. Attention is also given to general aspects of the use of multispectral photography to study the flow of suspensions carried by rivers into the coastal regions of seas and lakes. B.J.

A82-27468 † The use of space photographs for hydrogeological studies of the Baikal region and Mongolia (Ispol'zovanie kosmicheskikh snimkov dlia gidrogeologicheskikh issledovanii raionov Pribaikal'ia i Mongolii). Iu. L. Ob'edkov. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 85-96. 10 refs. In Russian.

The principles of the hydrogeological interpretation of space remote sensing images are discussed, with particular attention given to the determination of the relationship between various hydrogeological objects and landscape elements. A detailed analysis of space photographs makes it possible to determine the locations and boundaries of artesian basins, to characterize the water-conducting and collecting properties of water-containing rocks, and to evaluate subsurface water resources. The proposed method was used to study the hydrogeology of the Baikal region and the western part of central Mongolia. B.J.

A82-27469 † The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ (Vliianie antropogennykh faktorov na dinamiku ravninnykh ozer Srednei Azii /po materialam kosmicheskikh s'emok/). A. M. Nikitin and Iu. N. Lesnik. In: Aerospace methods for the study of water resources and their pollution.
Leningrad, Gidrometeoizdat, 1981, p. 97-102. 5 refs. In Russian.

A82-27470 † Primary processing of and possibilities of using data from the meteorological satellite TIROS-N (Pervichnaia obrabotka i vazmozhnosti ispol'zovaniia dannykh meteorologicheskogo sputnika 'Tairos-N'). Sh. Kyevskii and V. Tollinger. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 103-107. In Russian.

Results of the primary processing of images of Czechoslovakia obtained with TIROS-N are presented. Geometric and radiative correction in three spectral intervals was used along with quantization and synthesis of images in conditional colors. The applicability of these data to hydrology is examined. B.J.

A82-27471 † Monitoring of the thermal pollution of natural channels of water using infrared aerial photography (Obsledovanie teplovogo zagriazneniia estestvennykh vodotokov s ispol'zovaniem infrakrasnoi aeros'emki). D. Domokosh. In: Aerospace methods for the study of water resources and their pollution.
Leningrad, Gidrometeoizdat, 1981, p. 108-113. In Russian.

It is proposed that infrared and aerial photography techniques be used to study river pollution resulting from power-plant emissions. As an illustration of the method, aerial photography in the visible (0.38-0.76 micron) and near IR (2.0-5.0 microns) was used to study the pollution of a section of the Danube in Hungary. A pollution distribution map of a 10-km section of the river was obtained (including the propagation of thermal waters only along the left bank). Stereophotogrammetry was used to determine the flow velocity. B.J.

A82-27472 † Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs (Issledovanie zaileniia i techenii oz. Balaton s primeneniem gidravlicheskikh modelei i aerokosmicheskikh snimkov). L. Goda. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 114-119. In Russian.

A82-27473 † Interpretation of multispectral aerial photographs of Lake Müggelsee (Deshifrirovanie mnogozonal'nykh aerofotosnimkov oz. Miugel'zee). E. Iung. In: Aerospace methods for the study of water resources and their pollution.
Leningrad, Gidrometeoizdat, 1981, p. 120-122. In Russian.

A82-27474 † Spectrometric studies of the water composition of Lake Müggelsee (Spektrometricheskie issledovaniia sostava vod oz. Miugel'zee). D. Slavik. In: Aerospace methods for the study of water resources and their pollution.
Leningrad, Gidrometeoizdat, 198, p. 123-126. In Russian.

A hand-held spectrometer operating in the 335-1150 nm range was used to study the reflectance of water samples from Lake Müggelsee. The reflectance in this spectral range was studied as a function of the concentration of sediments in the water. The influence of suspensions of peat, green algae, and blue-green algae on the reflectance of the water is examined. B.J.

A82-27475 † Noncontact methods for the quality control of water resources (Nekontaktnye metody kontrolia kachestva vod). Iu. V. Zavolokin, L. A. Shliakhova, V. I. Rodzin, and V. A. Kriul'kov. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 127-134. 17 refs. In Russian.

Remote sensing methods for the operational quality control of water resources are described. Results of remote measurements of the physical and chemical properties of water bodies and water mineralization are presented. The recording, storage, and processing of the remote sensing data using television systems and analog/digital conversion techniques are considered. The development of a general model for the remote monitoring of water resources is discussed. B.J.

A82-27476 † Analog devices for the processing of aerial and space images for the study of water resources (Analogovye ustroistva

dlia obrabotki aerokosmicheskikh fotoizobrazhenii pri izuchenii vodnykh resursov). V. A. Mikhailov and V. F. Usachev. In: Aerospace methods for the study of water resources and their pollution. Leningrad, Gidrometeoizdat, 1981, p. 135-140. In Russian.

The paper examines the use of analog devices for the interpretation of remote sensing images, particularly, the delineation of contours of varying optical density and the determination of their areas. The application of such devices in the study of water resources is considered, and the incorporation of such devices in systems for the automated processing of remote sensing images is examined. B.J.

A82-27592 * # **Spatial reasoning in remotely sensed data.** J. Campbell, R. W. Ehrich, D. Elliott, R. M. Haralick, and S. Wang (Virginia Polytechnic Institute and State University, Blacksburg, VA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 223-235. Contract No. NAS5-26276.

Photointerpreters employ a variety of implicit spatial models to provide interpretations from remotely sensed aerial or satellite imagery. In this paper one application is illustrated: how ridges and valleys can be automatically interpreted from Landsat imagery of a mountainous area, and how a relative elevation terrain model can be constructed from this interpretation. How to examine valleys for the possible presence of streams or rivers is shown, and how a spatial relational model can be set up to make a final interpretation of the river drainage network is explored. (Author)

A82-27610 # **Inland water quality assessment from Landsat data.** D. J. Carpenter (Australian National University, Canberra, Australia). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 483-490.

Landsat MSS data have been successfully applied to the collection of inland water quality data using multiple linear regressions. The data came from seven satellite acquisitions and simultaneous ground surveys of four lakes in the Southern Tablelands region of South East Australia. The linear models developed included the four band spectral radiances and the sun elevation as predictors and accounted for over 90% of the variance of the dependent variables. These were the water quality parameters turbidity and algal pigments. (Author)

A82-27613 # **Satellite sensing for extraction of groundwater resources information.** S. S. Kumar and S. Thiruvengadachari (National Remote Sensing Agency, Hyderabad, India). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 509-518.

Satellite derived data were used to generate regional level groundwater resources information in the chronically drought affected parts of central and southern India. Two different methodologies were adopted in the two different regions. In the first area, where geomorphology exercises a significant control over groundwater movement and occurrence, this relationship has been utilized to arrive at potential groundwater zones, whereas in Tamilnadu in south India basic resources information in regard to geology, geomorphology, hydrologic land use and soils were extracted and integrated to support a regional groundwater resources evaluation program. The two contrasting methodologies along with the case studies are described. Selection of suitable methodology in any area will depend upon the complexity of control over groundwater occurrence and movement, cost of survey and level of information required. (Author)

A82-27614 # **Snow cover monitoring using AVHRR data from TIROS and NOAA satellites.** G. Saint, P. Herbert (Centre National d'Etudes Spatiales, Toulouse, France), C. Leprieur (Grouppement pour le Développement de la Télédétection Aérospatiale, Toulouse, France), and M. Deneau (Electricité de France, Toulouse, France). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 519-526. 5 refs.

It is pointed out that the management of dams in hydroelectric projects could be substantially improved by monitoring the extent of the existing snow cover. In a study concerning the feasibility of such monitoring activities, it was found that the Advanced Very High Resolution Radiometer (AVHRR) carried by the TIROS-N series satellites would be the most suitable instrument for obtaining the required data. Attention is given to the characteristics of the AVHRR data, the principles of image segmentation, a description of the processing, the ground estimate, and a comparison of ground estimate and processing results. G.R.

A82-27634 # **Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980.** C. P. Berg, S. R. Schneider (NOAA, National Earth Satellite Service, Washington, DC), and D. L. Galat (Colorado State University, Fort Collins, CO). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 721-731. 16 refs.

Satellite data from the summers of 1978 and 1980 on calcium carbonate precipitation in Pyramid Lake, Nevada, are presented. The whiting sequence, the growth, distribution pattern, and cessation of the phenomenon were documented by NASA's Landsat and NOAA's GOES. Results from water chemistry sampling verify the satellite imagery, and give evidence of a relationship between particulate calcium concentration and observed brightness. An optimum spectral interval of 0.5-0.6 microns is verified, and a significant reduction of light penetration into the lake, and therefore light available for photosynthesis, is found to be caused by the whitings. D.L.G.

A82-27637 # **Use of Landsat imagery to delineate glaciofluvial aquifers in southeast South Dakota.** E. F. Bugliosi (U.S. Geological Survey, Huron, SD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 761-769. 7 refs.

An analysis of Landsat satellite imagery has been used in the delineation of buried glaciofluvial aquifers in southeastern South Dakota. A color and tonal pattern analysis was performed on a band 7 and a false color composite Landsat image obtained in April 1974 to detect linear and curvilinear patterns, and the patterns were compared with drainage and geomorphological overlays to locate any anomalies indicative of a buried glaciofluvial deposit. Test drilling at 50 locations within the Landsat area confirmed the presence or absence of aquifers predicted by the image analysis in 72% of the cases. Of the 17 holes drilled where Landsat predicted no deposits, 10 detected a glaciofluvial deposit, however five of these were either dry or located 30 m or more below the surface. Results demonstrate the feasibility of using Landsat images to delineate glaciofluvial aquifers at depths less than about 24 m below land surface. A.L.W.

A82-27639 # **Remote sensing of rainfall rates using airborne microwave rain-scatterometer/radiometer.** H. Inomata, K. Okamoto, T. Ojima, H. Masuko, S. Yoshikado, and N. Fugono (Ministry of Posts and Telecommunications, Radio Research Laboratories, Koganei, Tokyo, Japan). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 781-792.

Characteristics of an airborne microwave rain-scatterometer and radiometer operating at X-band and Ka-band are summarized. Data analysis techniques for deriving rainfall rates from the received powers of the scatterometer are briefly described. Some preliminary results of flight experiments performed in October 1980 for rain on the sea are discussed. Qualitative correlations between rainfall rates calculated from the X-band scatterometer data and antenna temperatures of the X-band radiometer data are clearly found. They also correlate fairly well with the attenuation of backscattered powers from sea surfaces. Typical displays of analyzed data in the flight experiment are shown. The ground-based experiment for strong rainfall from the rainfront stimulated by the typhoon in September 1980 are also discussed. An example of time sequential display of rainfall rates distribution are presented. Average wind speeds and falling speeds of raindrops can be easily estimated from the display. (Author)

A82-27692 # **Mapping of water quality using Landsat imagery.** L. T. Lindell (Statens Naturvardsverk, Uppsala, Sweden). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1375-1385. 9 refs.

This paper discusses the possibilities of using Landsat imagery for purposes of mapping water quality. The methodology was first worked out on Lake Malaren, Sweden, where most of the practical procedures were tried and the variables to be mapped were chosen. The county of Orebro was selected as a test area for the country-wide mapping. This area contains more than 500 lakes larger than 10 ha ranging in trophic state from oligotrophic to eutrophic and, in elevation from mountain to lowland. Variables studied include turbidity, Secchi disc depth and lake surface area. The satellite data were geometrically corrected and color printed on a scale of 1:100 000 using an ink jet plotter. The experiences from this work will be used to develop a map of the water quality of Sweden. Mapping should be repeated frequently to record changes in water quality. Changes in water quality are displayed together with a separate field data base, which is used to determine possible causes for the changes. (Author)

(Grant NGL-50-002-127)
(E82-10021; NASA-CR-164815) Avail: NTIS HC A03/MF A01 CSCL 08H

Progress is reported in the following NASA-funded projects: (1) sediment plume study; (2) atmospheric correction to LANDSAT imagery; (3) demonstrating and evaluating opportunites for operational application of LANDSAT data in Wisconsin; and (4) the development of a facility to process imagery for the study of land cover, land use, water quality, electrophoresis gel analysis, prediction of storm and snow flow conditions, physical oceanography, and soils. Associated projects summarized are concerned with vegetation mapping in Sheboygan Marsh, surveying the Green Bay watershed to estimate the impact of land development on bay water quality; thermal scanning of ocean fronts; lake water quality, the Irondequoit River watershed, a model of thermal environment for land use planning, and changes in wetland vegetation near the Columbia Generating Station. Emphasis was focused on the selection of equipment for the efficient processing of images used for water-quality analysis and the development of supporting software for application by users. A.R.H.

SPECTRAL REFLECTANCES OF FRESHWATER ICE AND SNOW FROM 340 THROUGH 1100 nm Ph.D. Thesis
Stanley Joseph Bolsenga 1981 159 p
Avail: Univ. Microfilms Order No. 8125073

Measured spectral reflectances of new and moderately metamorphosed snow were generally > 80% from 340 to 950 nm. From 950 to 100 nm a characteristic dip and rise of spectral reflectances occurred. One scan over a deteriorated snow patch showed much lower spectral reflectances than fresh snow, but the shape of the curve remained similar to fresher snow. Spectral reflectances for clear ice contrasted sharply with those for snow. In general, values were < 10% and the curves lacked distinctive shape. Higher spectral reflectances, due to lighter colored ice in the measurement area, were measured at some sites. Secondary ice types (refrozen slush, pancake, brash, slush curd) revealed spectral reflectance curves similar in form to each other, but which varied significantly in the range of spectral reflectances for each ice type. All measurements were acquired with a pair of scanning spectroradiometers adapted to obtain automatically simultaneous readings of incident and reflected radiation from 340 to 100 nm. Dissert. Abstr.

WATERSHED MODEL STUDY USING LANDSAT DATA Ph.D. Thesis
Tien-Po Chang 1981 331 p
Avail: Univ. Microfilms Order No. 8126421

In connection with the use of remote sensing techniques, a digital terrain model that characterizes geometric features and other terrain conditions of a watershed is necessary for watershed modeling. As a result of constructing a watershed cell system on the digital terrain model, the mathematical formation on simulated physical processes can be simplified since the mathematical expressions only handle the small-sized, well-defined and relatively homogeneous components of the physical processes within a watershed cell. Four submodels that link the processing of the remote sensed data to the watershed analysis were developed. The submodels are LANDSAT image data processing model, digital terrain model, hydrologic simulation model, and landslide-hazard potential delineation model. The structure, function, and computer programs related to these models, along with the results of watershed simulation using the models, are presented and discussed. Dissert. Abstr.

ELECTROMAGNETIC SUBSURFACE MEASUREMENTS
Arnold M. Dean, Jr. Oct. 1981 24 p
(Proj. CWIS-31350)
(AD-A108192; CRREL-SR-81-23) Avail: NTIS HC A02/MF A01 CSCL 17/9

In 1974, personnel at the U.S. Army Cold Regions Research and Engineering Laboratory (CRREL) began using an impulse radar system to profile accumulations of ice forms. The system was modified for effective use as a profiling system in a ground or airborne configuration, in certain high-noise environments. The system can penetrate fresh water and media with a high water content. Frazil and brash ice accumulations with approximately 50% water were profiled to a depth of 25 to 35 ft. As a result of the CRREL modifications, the system has found extensive and varied applications as a low-level remote sensing tool. Applications include profiling ice accumulations (including ice jams), river beds, sheet ice, permafrost, subsurface ice masses, river bank revetments through air-entrained water, snow covers, sea ice, icebergs, and peat bogs. Limited laboratory work has also shown that the impulse radar system may be able to detect oil and gas under sea ice. Selected applications and data are presented. Since it was used mainly for research, the CRREL system needs further development to make it useful to operational units. Additional development of hardware and software is recommended. GRA

SPECTRAL ALBEDOS OF MIDLATITUDE SNOWPACKS
Bhaskar Choudhury Nov. 1981 41 p refs Submitted for publication
(NASA-TM-83858) Avail: NTIS HC A03/MF A01 CSCL 08L

Spectral albedos of impure-nonhomogeneous snowpacks, typical of midlatitudes, from 400 to 2200 nm were modeled through a numerical solution of the radiative transfer equation in the two-stream approximation. Discrete depth-dependent values of density, grain size and impurity concentration were used to characterize the snowpacks. The model is for diffuse incident radiation, and the numerical method is based on doubling and invariant imbedding. The effect of soot impurities on snowpack albedos is illustrated when a snowpack is several centimeters deep and soot reduces the albedos at visible wavelengths, however, when a snowpack is only a few centimeters deep, soot may increase the albedos at visible wavelengths. By adjusting soot content and snow grain size, good quantitative agreement with some observations at the Cascade Mountains (Washington) and at Point Barrow (Alaska) are obtained; however, the model grain sizes are found to be fifty to four hundred percent larger than the measured values. For satellite snowcover observations, a model for effective albedo of partially snow-covered areas was developed and compared with some NOAA-2 observations of the southeastern United States. T.M.

GROUND-TRUTH OBSERVATIONS OF ICE-COVERED NORTH SLOPE LAKES IMAGED BY RADAR
W. F. Weeks Oct. 1981 24 p refs Prepared in cooperation with CRREL, Hanover, N.H.
(NASA-TM-84127; AD-A108342; CRREL-81-19) Avail: NTIS HC A02/MF A01 CSCL 08/8

Field observations support the interpretation that differences in the strength of radar returns from the ice covers of lakes on the North Slope of Alaska can be used to determine where the lake is frozen completely to the bottom. An ice/frozen soil interface is indicated by a weak return and an ice/water interface by a strong return. The immediate value of this result is that SLAR (side-looking airborne radar) imagery can now be used to prepare maps of large areas of the North Slope showing where the lakes are shallower or deeper than 1.7m (the approximate draft of the lake ice at the time of the SLAR flights). The bathymetry of these shallow lakes is largely unknown and is not obvious from their sizes or outlines. Such information could be very useful, for example in finding suitable year-round water supplies. Author (GRA)

MEASUREMENT OF RIVER SEDIMENTS
1981 69 p refs
(WMO-561; OHR-16; ISBN-92-63-10561-8) Avail: NTIS MF A01; print copy available at WMO, Geneva

Samples and remote sensing techniques for measuring sediment discharge in alluvial rivers are reviewed, noting that the simplest as well as sophisticated methods are not mutually exclusive. It is demonstrated that, in many cases, the optimum means for systematic sediment measurement is a combination of traditional and advanced methods and instruments. Areas where further improvement is needed, e.g., automation and telemetering as well as the international standardization of water pollution aspects of sediment monitoring, are indicated. FLASH FLOOD FORECASTING
A. J. Hall 1981 49 p refs
(WMO-577; OHR-18; ISBN-92-63-10577-4) Avail: NTIS MF A01; print copy available at WMO, Geneva SwFr 6

The problem of flash floods is reviewed and basic flash flood forecasting techniques, warning systems, and non-real time solutions to flash flooding are discussed. Data sources for flash flood forecasting are identified, including radar, satellites and quantitative precipitation forecasting. Flash flood forecasting can be based on meteorological, hydrological, meteorological-hydrological or dam break techniques. The design and establishment of flash flood warning systems, ranging from simple networks and procedures to sophisticated computerized automatic systems are described. The success of a flash flood warning system is measured by public response to warnings, the saving of life, and reduction of damage to property. Community involvement is evaluated, indicating the complex interactions among agencies, information dissemination subsystems and the public. Flood plain zoning, and basin management and the construction of engineering works are considered. The limitations and advantages of flood damage reduction measures are also analyzed. Author (ESA)

PRECIPITATION ASSESSMENT FROM ENVIRONMENTAL SATELLITE DATA FOR NORTHWEST LIBYA INCLUDING THE GEFARA PLAN
A. vanDijk 1981 50 p refs
(RSC-4) Avail: NTIS HC A04/MF A01

The FAO precipitation assessment technique (satellite imagery combined with rain gage data) was applied to NW Libya to improve precipitation monitoring in this data sparse region. A 21 day period containing a few dry days, a heavy rainstorm, then a few more dry days was chosen. Rain gages reported 3 days of heavy rainfall, but failed to detect 2 further days with rain indicated by satellite data. The FAO rainfall maps appear more reliable than rain gage ones. The application of the technique to the whole of Libya, using Meteosat 2, and 10 reliable, well distributed rain gages, in combination with selected rain gages in South Italy, Tunisia and West Egypt is suggested. HCMM HYDROLOGICAL ANALYSIS IN UTAH
3 Sep. 1981 37 p refs Original contains imagery. Original imagery may be purchased from NASA Goddard Space Flight Center, (code 601), Greenbelt, Md. 20071. Domestic users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A from Rockets and Satellites'. HCMM
(E82-10063; NASA-CR-165085; NAS 1.26:165085; QR-2) Avail: NTIS HC A03/MF A01 CSCL 08H

Progress in analysis of Heat Capacity Mapping Mission (HCMM) infrared and visible observations of the hydrology of Utah Lake is reported. Correlation between HCMM intensities converted to temperature and ground truth temperatures was investigated, and a conversion offset value determined. Ground truth surface temperatures minus HCMM temperatures were plotted against several hydrological parameters. Relationships among visible data, thermal data, and algae concentrations were considered, and summer concentrations of predominant algae species determined. Investigations on the effects of varying algae concentrations on evaporation rates are reported. Efforts to develop a model for evaporation estimation are reported. The relationship between air and water surface temperatures was studied and the temperature distribution in different segments of the lake investigated. Indications of the existence of thermal springs are reported. Correlation of HCMM surface temperature data and depth to groundwater were investigated. J.D.H.

Digital thermal maps of the Cooper River (SC) and the Potomac River estuaries were prepared from heat capacity mapping radiometer (HCMR) tapes. Tidal phases were correctly interpreted and verified. Synoptic surface circulation patterns were charted by location thermal fronts and water mass boundaries within the estuaries. Thermal anomalies were detected adjacent of a conventional power plant on the Potomac. Under optimum conditions, estuaries as small as the Cooper River can be monitored for generalized thermal/tidal circulation patterns by the HCMM-type IR sensors. The HCMM thermal inertia approach to estimating soil moisture at the Luverne (MN) test site was found to be unsatisfactory as a NESS operational satellite technique because of cloud cover interference. Thermal-IR data show similar structure of the Baltimore and Washington heat islands when compared to NOAA AVHHR thermal-IR data. Thermal anomalies from the warm water discharge water of a nuclear power plant were mapped in Lake Anna, Virginia. A.R.H.

DYNAMIC STUDY OF THE UPPER SAO FRANCISCO RIVER AND THE TRES MARIAS RESERVOIR USING MSS/LANDSAT IMAGES [ESTUDO DINAMICO DO ALTO RICO SAO FRANCISCO ERESERVATORIO DETRES MARIAS, ATRAVES DE IMAGENS MSS/LANDSAT]
Nelson deJesusParada, Principal Investigator and Tania Maria Sausen Jul. 1981 77 p refs In PORTUGUESE Presented at 33rd Reuniao Anual da SBPC, Salvador, Brazil, 8-15 Jun. 1981 Sponsored by NASA ERTS
(E82-10082; NASA-CR-168403; NAS 1.26:168403; INPE-2154-RPE/373) Avail: NTIS HC A05/MF A01 CSCL 08H

The use of LANDSAT multispectral ban scanner imagery to verify the relationship between the behavior of the Tres Marias reservoir and the dynamics of the Sao Francisco River supply basin is described. The dispersion of suspended sediments and their concentration in the surface layers of the water are considered. A five year survey of the region during both dry and rainy seasons was performed. The drainage network was analyzed based on the patterns of dessication, water rises and soil use in the supply basin. Surface layers of the reservoir were tabulated as a function of the levels of gray in the imagery. In situ observations of water depth and reflectance were performed. Ground truth and LANDSAT data were correlated to determine the factors affecting the dynamics of the supply basin. J.D.H.

APPLICATIONS SYSTEMS VERIFICATION AND TRANSFER PROJECT. VOLUME 1: OPERATIONAL APPLICATIONS OF SATELLITE SNOW COVER OBSERVATIONS: EXECUTIVE SUMMARY
Albert Rango Dec. 1981 81 p refs 8 Vol.
(NASA-TP-1822; NAS 1.60:1822; Rept-81F0060-Vol-1) Avail: NTIS HC A05/MF A01 CSCL 05B

Both LANDSAT and NOAA satellite data were used in improving snowmelt runoff forecasts. When the satellite snow cover data were tested in both empirical seasonal runoff estimation and short term modeling approaches, a definite potential for reducing forecast error was evident. A cost benefit analysis run in conjunction with the snow mapping indicated a $36.5 million annual benefit accruing from a one percent improvement in forecast accuracy using the snow cover data for the western United States. The annual cost of employing the system would be $505,000. The snow mapping has proven that satellite snow cover data can be used to reduce snowmelt runoff forecast error in a cost effective manner once all operational satellite data are available within 72 hours after acquisition. Executive summaries of the individual snow mapping projects are presented. J.M.S.

APPLICATIONS SYSTEMS VERIFICATION AND TRANSFER PROJECT. VOLUME 2: OPERATIONAL APPLICATIONS OF SATELLITE SNOW-COVER OBSERVATIONS AND DATA-COLLECTION SYSTEMS IN THE ARIZONA TEST SITE
Herbert H. Schumann Dec. 1981 62 p refs 8 Vol.
(NASA-TP-1823; NAS 1.60:1823; Rept-81F0061-Vol-2) Avail: NTIS HC A04/MF A01 CSCL 08L

Ground surveys and aerial observations were used to monitor rapidly changing moisture conditions in the Salt-Verde watershed. Repetitive satellite snow cover observations greatly reduce the necessity for routine aerial snow reconnaissance flights over the mountains. High resolution, multispectral imagery provided by LANDSAT satellite series enabled rapid and accurate mapping of snow-cover distributions for small- to medium-sized subwatersheds; however, the imagery provided only one observation every 9 days of about a third of the watershed. Low resolution imagery acquired by the ITOSa dn SMS/GOES meteorological satellite series provides the daily synoptic observation necessary to monitor the rapid changes in snow-covered area in the entire watershed. Short term runoff volumes can be predicted from daily sequential snow cover observations. J.M.S.

Five southern Sierra snowmelt basins and two northern Sierra-Southern Cascade snowmelt basins were used to evaluate the effect on operational water supply forecasting from satellite imagery. Manual photointerpretation techniques were used to obtain SCA and equivalent snow line for the years 1973 to 1979 for the seven test basins using LANDSAT imagery and GOES imagery. The use of SCA was tested operationally in 1977-79. Results indicate the addition of SCA improve the water supply forecasts during the snowmelt phase for these basins where there may be an unusual distribution of snowpack throughout the basin, or where there is a limited amount of real time data available. A high correlation to runoff was obtained when SCA was combined with snow water content data obtained from reporting snow sensors. T.M.

APPLICATIONS SYSTEMS VERIFICATION AND TRANSFER PROJECT. VOLUME 4: OPERATIONAL APPLICATIONS OF SATELLITE SNOW COVER OBSERVATIONS. COLORADO FIELD TEST CENTER
Bernard A. Shafer, Charles F. Leaf, Jeris A. Danielson (Colorado State Engineers Office), and George F. Moravec (Colorado State Engineers Office) Dec. 1981 101 p refs 8 Vol.
(NASA-TP-1825; NAS 1.60:1825; Rept-81F0063-Vol-4) Avail: NTIS HC A06/MF A01 CSCL 08L

The study was conducted on six watersheds ranging in size from 277 km to 3460 km in the Rio Grande and Arkansas River basins of southwestern Colorado. Six years of satellite data in the period 1973-78 were analyzed and snowcover maps prepared for all available image dates. Seven snowmapping techniques were explored; the photointerpretative method was selected as the most accurate. Three schemes to forecast snowmelt runoff employing satellite snowcover observations were investigated. They included a conceptual hydrologic model, a statistical model, and a graphical method. A reduction of 10% in the current average forecast error is estimated when snowcover data in snowmelt runoff forecasting is shown to be extremely promising. Inability to obtain repetitive coverage due to the 18 day cycle of LANDSAT, the occurrence of cloud cover and slow image delivery are obstacles to the immediate implementation of satellite derived snowcover in operational streamflow forecasting programs. T.M.

APPLICATIONS SYSTEMS VERIFICATION AND TRANSFER PROJECT. VOLUME 5: OPERATIONAL APPLICATIONS OF SATELLITE SNOW-COVER OBSERVATIONS, NORTHWEST UNITED STATES
John P. Dillard Dec. 1981 84 p refs 8 Vol.
(Contract NASA Order S-53877)
(NASA-TP-1826; NAS 1.60:1826; Rept-81F0064-Vol-5) Avail: NTIS HC A05/MF A01 CSCL 08L

The study objective was to develop or modify methods in an operational framework that would allow incorporation of satellite derived snow cover observations for prediction of snowmelt derived runoff. Data were reviewed and verified for five basins in the Pacific Northwest. The data were analyzed for up to a 6-year period ending July 1978, and in all cases cover a low, average, and high snow cover/runoff year. Cloud cover is a major problem in these springtime runoff analyses and have hampered data collection for periods of up to 52 days. Tree cover and terrain are sufficiently dense and rugged to have caused problems. The interpretation of snowlines from satellite data was compared with conventional ground truth data and tested in operational streamflow forecasting models. When the satellite snow-covered area (SCA) data are incorporated in the SSARR (Streamflow Synthesis and Reservoir Regulation) model, there is a definite but minor improvement. T.M.

(NASA-TP-1827; NAS 1.60:1827; Rept-81F0065-Vol-6) Avail: NTIS HC A04/MF A01 CSCL 05B

Geostationary and polar orbiting satellite data from the National Oceanic and Atmospheric Administration were used to operationally provide field hydrologists with basin snowcover percentages for inclusion in runoff models. Data reduction is accomplished thru the use of optical rectification devices and electronic color density slicers. Over two thousand satellite-derived snow maps covering 30 different basins in the western United States were provided to users. Plans for improving snowmapping techniques on computer interactive systems and by all-digital analysis are presented. A description of the newest generation of NOAA polar orbiters, TIROS-N, and its potential for snowmapping is reviewed. Snowcover percentages for all basins determined between November 1974 and July 1978 are presented in tabular format. J.M.S.

APPLICATIONS SYSTEMS VERIFICATION AND TRANSFER PROJECT. VOLUME 7: COST/BENEFIT ANALYSIS FOR THE ASVT ON OPERATIONAL APPLICATIONS OF SATELLITE SNOW-COVER OBSERVATIONS
P. Castruccio, H. Loats, D. Lloyd, and P. Newman Dec. 1981 245 p refs 8 Vol.
(Contract NAS5-23729)
(NASA-TP-1828; NAS 1.60:1818; Rept-81F0066-Vol-7) Avail: NTIS HC A11/MF A01 CSCL 08L

The results of the OASSO ASVT's were used to estimate the benefits accruing from the added information available from satellite snowcover area measurement. Estimates of the improvement in runoff prediction due to addition of SATSCAM were made by the Colorado ASVT personnel. The improvement estimate is 6-10%. Data were applied to subregions covering the Western States snow area amended by information from the ASVT and other watershed experts to exclude areas which are not impacted by snowmelt runoff. Benefit models were developed for irrigation and hydroenergy uses. The benefit/cost ratio is 72:1. Since only two major benefit contributors were used and since the forecast improvement estimate does not take into account future satellite capabilities these estimates are considered to be conservative. The large magnitude of the benefit/cost ratio supports the utility and applicability of SATSCAM. T.M.

ASSESSMENT OF THE QUALITY OF GATE AREA RAINFALL DATA FROM A NIMBUS-5 RADIOMETER Final Report
Nathaniel Knox 31 Mar. 1982 18 p refs
(Grant NAG5-14)
(NASA-CR-168512; NAS 1.26:168512) Avail: NTIS HC A02/MF A01 CSCL 04B

The quality of rainfall intensity estimates derived from passive microwave measurements by the Electrically Scanned Microwave Radiometer (ESMR-5) aboard the NIMBUS-5 satellite was evaluated. The microwave measurements used are those coincident with the GARP (Global Atmospheric Research Program) Atlantic Tropical Experiment (GATE). ESMR-5 derived rainfall intensity estimates are compared with hourly averaged GATE radar rainfall measurements. Using the radar measurements as ground truth it is determined that with the transfer curve derived herein the ratio (ESMR-5 derived rain rate)/radar measured rain rate has a mean of approximately 0.62. STRATEGIES FOR USING REMOTELY SENSED DATA IN HYDROLOGIC MODELS Final Report
E. L. Peck, T. N. Keefer, and E. R. Johnson, Principal Investigators 31 Jul. 1981 85 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS5-26446; Proj. AgRISTARS)
(E82-10156; NASA-CR-166729; NAS 1.26:166729) Avail: NTIS HC A05/MF A01 CSCL 05B

Present and planned remote sensing capabilities were evaluated. The usefulness of six remote sensing capabilities (soil moisture, land cover, impervious area, areal extent of snow cover, areal extent of frozen ground, and water equivalent of the snow cover) with seven hydrologic models (API, CREAMS, NWSRFS, STORM, STANFORD, SSARR, and NWSRFS Snowmelt) were reviewed. The results indicate remote sensing information has only limited value for use with the hydrologic models in their present form. With minor modifications to the models the usefulness would be enhanced. Specific recommendations are made for incorporating snow covered area measurements in the NWSRFS Snowmelt model. Recommendations are also made for incorporating soil moisture measurements in NWSRFS. Suggestions are made for incorporating snow covered area, soil moisture, and others in STORM and SSARR. General characteristics of a hydrologic model needed to make maximum use of remotely sensed data are discussed. Suggested goals for improvements in remote sensing for use in models are also established. Author

LABORATORY UPWELLED RADIANCE AND REFLECTANCE SPECTRA OF KERR RESERVOIR SEDIMENT WATERS
William G. Witte, Charles H. Whitlock, W. Douglas Morris, and E. A. Gurganus Mar. 1982 22 p refs
(NASA-TP-1993; L-14992; NAS 1.60:1993) Avail: NTIS HC A02/MF A01 CSCL 13B

Reflectance, chromaticity, and several other physical and chemical properties were measured for various water mixtures of bottom sediments taken from two sites at Kerr Reservoir, Virginia. Mixture concentrations ranged from 5 to 1000 ppm by weight of total suspended solids (TSS) in filtered deionized tap water. The two sets of radiance and reflectance spectra obtained were similar in shape and magnitude for comparable values of TSS. Upwelled reflectance was observed to be a nonlinear function of TSS with the degree of curvature a function of wavelength. Sediment from the downstream site contained a greater amount of particulate organic carbon than from the upstream site. No strong conclusions can be made regarding the effects of this difference on the radiance and reflectance spectra. Near-infrared wavelengths appear useful for measuring highly turbid water with concentrations up to 1000 ppm or more. Chromaticity characteristics do not appear useful for monitoring sediment loads above 150 ppm. Author

DATA PROCESSING AND DISTRIBUTION SYSTEMS

Includes film processing, computer technology, satellite and aircraft hardware, and imagery.

A82-19833 † Optimal methods of computerized image conversion (Ob optimal'nykh sposobakh preobrazovaniia izobrazhenii na EVM). V. I. Krasnov, S. L. Krylov, and B. I. Savel'ev. *Geodeziia i Kartografiia,* Dec. 1981, p. 34-38. In Russian.

It is noted that digital methods of processing images are far more effective than analog methods. Because of the machine time required, however, these methods are less economical. A general model of image conversion using a computer and an input-output device for the images is considered. C.R.

A82-20347 † Diffusion model of cloud cover and its use in the analysis of satellite operations (Diffuzionnaia model' oblachnosti i ee ispol'zovanie pri analize raboty ISZ). V. K. Saul'skii. *Issledovanie Zemli iz Kosmosa,* Nov.-Dec. 1981, p. 73-78. In Russian.

A diffusion model is developed which can be used to analyze the effects of cloud cover on satellite observations of the earth surface. Cloud cover values are modeled as a continuous Markov process of diffusion type which is completely characterized by two parameters: the transport coefficient and the diffusion coefficient. The application of this model to operations involving the remote sensing of earth resources is considered. B.J.

A82-20401 The accuracy potential of the modern bundle block adjustment in aerial photogrammetry. A. Grün (München, Technische Universität, Munich, West Germany). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 45-54. 24 refs.

The use of orthogonal bivariate polynomials as an additional parameter set, together with a gross error detection strategy, are shown to be necessary for self-calibrating bundle block adjustment photogrammetry accuracy. This is illustrated by the processing of data from four test field blocks, gathered by means of three different camera systems, proving empirically that 2.5-micron planimetry and 4.5-micron height accuracies can be achieved for photogrammetric coordinates. The use of dense control and 60/60% overlap, together with the additional parameter set, are demonstrated to be essential for the continuous achievement of such accuracy levels. These results are judged to carry analytical photogrammetry into such new fields of application as network densification and cadastral surveying. O.C.

A82-20402 Analytical triangulation of space photography. M. E. O. Ali (Gendron, Lefebvre, Inc., Laval, Quebec, Canada) and A. J. Brandenberger (Université Laval, Quebec, Canada). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 55-65. 12 refs. Research sponsored by the Department of Energy, Mines and Resources and National Research Council of Canada.

A computer program implementing a mathematical model is used to assess the accuracy of analytical aerial triangulation using Skylab photography combined with high-altitude aircraft photography and Skylab orbital parameters. Two novel bundle adjustment methods are employed: (1) in which the coordinates of the ground control as well as the photo measurements are used as observations in the collinearity condition equations, and (2) in which the camera parameters, control point ground coordinates and the photo measurements are used as observations in the equations. The former method yielded root mean square errors of 53 m in planimetry and 148 m in height. Comparisons of tests to which both bundle adjustment methods were submitted show a significant improvement in planimetric accuracy with the latter method, although this may be due to inherent Skylab mission difficulties. O.C.

A82-20403 Calibration and model reconstruction in analytical close-range stereophotogrammetry. I - Mathematical fundamentals. W. Frobin and E. Hierholzer (Orthopädische Universitätsklinik, Münster, West Germany). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 67-72. 10 refs. Research supported by the Deutsche Forschungsgemeinschaft.

A discussion is presented on the application of the photogrammetric bundle method to close-range problems, with respect to (1) stereophotography, (2) rasterstereography, or the use of a projected grid in stereophotogrammetry, (3) moiré topography, and (4) stereoradiography. After giving the mathematical principles of the method in a form appropriate for application to most close-range problems, a simplified procedure which employs alternating orientation and reconstruction steps is described. In addition, a discussion on the convergence of the solution of the bundle equations and an error analysis are given. O.C.

A82-20404 The location of three-dimensional linear objects by using multiple projections. S. Kondo, R. Ohba, and K. Murata (Hokkaido University, Sapporo, Japan). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 73-79. 10 refs.

A novel method is proposed which determines the least-squares position of a point, a straight line or a curved line by means of plural projections. The method is characterized by the following features: (1) the influence of errors on measurements is minimized, since the result is obtained as the least-squares solution for all data points; (2) the relative positions of data points on the object are unnecessary for every projection; (3) the cost function value at the termination of iterative calculation indicates the variance of the distances between data lines and the least-squares position; (4) the number of calculations increases as more projections and data lines are acquired for higher accuracy; and (5) in the case of a complex object, it is often difficult to select the initial simplex within the domain of the peak containing the minimum cost function value. O.C.

A82-20409 The use of digital multi-date Landsat imagery in terrain classification. H. Schreier, L. M. Lavkulich (British Columbia, University, Vancouver, Canada), and L. C. Goodfellow (Canada Centre for Remote Sensing, Ottawa, Canada). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 111-119. 21 refs. Research supported by the Defence Research Establishment.

A quantitative assessment was made of organic terrain in northern Canada, in order to predict off-road mobility conditions, by using multi-date satellite imagery which provides contrast between vegetation communities and surface materials. A principal component analysis was used to identify the two most important MSS bands for each image, and selected spectral data from two images were then combined and subjected to an unsupervised cluster analysis. The resulting, color-coded images were then related to ground conditions, and were found to be directly useful as thematic mobility maps for operational planning in such environments. O.C.

A82-20410 Techniques for combining Landsat and ancillary data for digital classification improvement. C. F. Hutchinson (Arizona, University, Tucson, AZ). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 123-130. 17 refs. Research supported by the U.S. Geological Survey.

Such ancilliary data as digitized maps and terrain elevation data are combined with Landsat data in order to improve the digital classification in natural resource inventories. The combined data have been used in (1) preclassification scene stratification; (2) postclassification class sorting; and (3) classification modification through increases of the number of observation channels, the modification of prior probabilities, or the addition of a second stage to the classification. The two former uses of the data are found to be efficient, yet unsophisticated due to their reliance on deterministic decision rules. Of the later uses, stratification of the sample used for training by the ancilliary data is found to improve accuracy, as do the altering of prior probabilities and the incorporation of distribution models at the expense of additional sampling. O.C.

A82-20411 Sampling for thematic map accuracy testing. G. H. Rosenfield, K. Fitzpatrick-Lins, and H. S. Ling (U.S. Geological Survey, National Mapping Div., Reston, VA). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Jan. 1982, p. 131-137. 13 refs.

The cumulative binomial distribution is used in thematic map accuracy testing to develop (1) the minimum sample size needed to validate the accuracy for each category with specified confidence, and (2) the critical level, which is used as the criterion for determining whether the identification from remotely sensed data of a thematic category meets a specified accuracy. The algorithm used in map accuracy testing employs a stratified, systematic, unaligned sampling technique based on the map as a whole, and an additional random sample of points for under-represented categories from all points in that category. Such a technique is implemented by a computer program prepared to select the sample from the Geographic Information Retrieval and Analysis System file. The estimated overall accuracy of the map, and the estimated accuracy for each category of the map, are considered, with associated confidence limits. O.C.

A82-20423 * **Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance.** Y. Mekler (Tel Aviv University, Tel Aviv, Israel) and Y. J. Kaufman (NASA, Goddard Space Flight Center, Laboratory for Atmospheric Sciences, Greenbelt, MD). *Applied Optics,* vol. 21, Jan. 15, 1982, p. 310-316. 21 refs.

A radiative transfer model is developed which gives the upward radiance at nadir for any 1-D Lambertian surface reflectance. This model is used to depict the atmospheric effect on the transmittance of contrast for any 1-D surface reflectance. Here by contrast we mean a general variation of the radiation field across the image. With the aid of this model an inversion algorithm is developed for retrieval of true surface reflectance from high resolution satellite data (e.g., Landsat). This inversion technique can be a useful tool for extraction of surface reflectance from satellite data in the case of a surface reflectance variable in one dimension only (e.g., seashore or near borders of big fields). A sensitivity study of the inversion procedure on the knowledge of atmospheric parameters and sensor calibration was performed. It is shown that this inversion technique is stable even in the presence of errors in the sensor calibration and the atmospheric parameters. The method was applied to Landsat data in two wavelengths. The results show reasonable dependence of the derived surface reflectance on the distance from the seashore. (Author)

A82-21039 * # **Comparison of sigma/deg/ obtained from the conventional definition with sigma/deg/ appearing in the radar equation for randomly rough surfaces.** D. M. LeVine (NASA, Goddard Space Flight Center, Greenbelt, MD). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 85-90. 18 refs.

Results from the radar cross section of rough surfaces calculated from a conventional definition and from a direct solution of the radar equation are compared. The purpose is to define conditions under which the conventional solution produces the same cross-section as the radar equation. A randomly rough conduction surface is considered for line sources and corrugated surfaces. Two problems are analyzed: first, a plane wave is assumed to be incident on the surface and the observed scattered fields are computed, and second, the scattered fields received by an antenna colocated with the emitting antenna are used to compute the available power. The fields are assumed to scatter incoherently and the stationary points are assumed to be homogeneously distributed over the surface. The cross sections are found to be equal if the observer is far from the surface compared to the radii of the surface at the specular points. M.S.K.

A82-21040 **Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns.** C. B. Chittineni (Conoco, Inc., Exploration Research Div., Ponca City, OK). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 99-111. 18 refs.

The estimation of recognition system performance and of the probabilities of label imperfections as maximum likelihood estimates from the classifier decisions of labeled and unlabeled patterns are considered. The classification of a set of labeled and unlabeled patterns are used to derive the maximum likelihood estimates of classification errors and a priori probabilities. Additionally, expressions for the asymptotic variances of probability of correct classification and proportions are presented. Imperfection in the labels are assumed, and simple models are developed for imperfections in the labels and classification errors. Dependencies between the imperfect, classifier, and true labels, and between the probabilities of label imperfections and the classification accuracies are accounted for. The techniques developed are applicable for processing remotely sensed multispectral data. M.S.K.

A82-21041 **Exterior algebraic processing for remotely sensed multispectral and multitemporal images.** M. Inamura, H. Toyota, and S. Fujimura (Tokyo, University, Tokyo, Japan). *IEEE Transactions on Geoscience and Remote Sensing,* vol. GE-20, Jan. 1982, p. 112-118. 5 refs. Research supported by the Japan Research Committee of Environmental Remote Sensing.

The application of Grassmann algebra to multispectral, multitemporal image processing is examined. The use of an exterior product, an inner product, and an inner product between two exterior products is introduced, and it is shown that a multispectral image and spectral images or a monochromatic image are representable by a vector image and a scalar image, respectively. The advantages of employing algebraic, as opposed to statistical, image processing are the simplicity of the algorithm because only the statistical mean values are used, and exterior image processing involves the algebraic relationship among spectral vectors or feature vectors. The method is noted to be the equivalent of a normalized correlation method. M.S.K.

A82-21089 **Information extraction from remotely sensed data - A user view.** J. Townshend (Reading University, Reading, Berks., England) and C. Justice (ESA, European Space Research Institute, Frascati, Italy). *(Remote Sensing Society, Conference on Image Processing - Enhancement or Degradation, University of London, London, England, Nov. 14, 1980.) International Journal of Remote Sensing,* vol. 2, Oct.-Dec. 1981, p. 313-329. 78 refs.

Digital image processing refers to a variety of transformations and manipulations for improving the ability to extract information from imagery. It is often difficult for the user to select the most suitable approach in computer-assisted information extraction. More objective assessments of the relative utility of the different supervised, unsupervised, and hybrid approaches, as well as the individual stages within each of them, is therefore required. The ultimate use of the information extracted from the data is also affected by its compatability with other geographical data planes. Four alternative strategies for incorporating remote sensing data into comprehensive automated geographic information systems are suggested, each of which differ according to flexibility and the quantity of data to be processed and stored. Finally, the success of image analysis and classification methods depends on the relationship between the capabilities of the sensing systems and the character of the phenomena being studied. J.F.

A82-21094 **The use of contextual information to improve land cover classification of digital remotely sensed data.** C. M. Gurney (Reading University, Reading, Berks., England). *International Journal of Remote Sensing,* vol. 2, Oct.-Dec. 1981, p. 379-388. 12 refs. Research supported by the Atomic Energy Research Establishment.

Errors frequently occur in land cover classifications which use remotely sensed data. Where the error is assumed to conform to particular spatial patterns, automated contextual correction methods may be applied. Various types of classification errors are described first, and possible contextual correction methods are suggested. Accuracy testing procedures applied both before and after correction are described. The error correction methods were applied to urban:nonurban classifications of four sets of Landsat data of the United Kingdom. The results of linear feature detection were added to the urban classification to reduce the confusion between roads and urban areas. The results were smoothed, and the objects below a given size were removed. Increases in accuracy were obtained which were statistically significant at the 95% confidence level. J.F.

A82-21398 **Digital photography techniques (Digitale Aufnahmetechnik).** O. Hofmann (Messerschmitt-Bölkow-Blohm GmbH, Munich, West Germany). *Bildmessung und Luftbildwesen,* vol. 50, Jan. 1, 1982, p. 16-32. 9 refs. In German.

Optoelectronic digital imagery technology has been developed for photographing the earth's surface from the air. The cameras operate according to a push-broom principle with high resolution, linear semiconductor photodetector arrays. Based on a successful 1978 flight, the Modular Optoelectric Multispectral Scanner (MOMS) was developed, which will be used on the SPAS platform of the 1983 Space Shuttle. Image data are recorded directly on high-density digital tapes, which are later transcribed on computer-compatible tapes for further processing. The image data are produced in graphic form in black-and-white or color by means of a raster plotter. Solutions are still being sought to handle the large data rates and storage requirements as well as to correct the geometric distortions of the scanning lines. J.F.

A82-22146 * **Registration of heat capacity mapping mission day and night images.** K. Watson, S. Hummer-Miller, and D. L. Sawatzky (U.S. Geological Survey, Denver, CO). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 263-268. 14 refs. NASA Order S-40256-B.

Registration of thermal images is complicated by distinctive differences in the appearance of day and night features needed as control in the registration process. These changes are unlike those that occur between Landsat scenes and pose unique constraints. Experimentation with several potentially promising techniques has led to selection of a fairly simple scheme for registration of data from the experimental thermal satellite HCMM using an affine transformation. Two registration examples are provided. (Author)

A82-22891 # **Classification of ice radar imagery.** G. Y. Tang (National Taiwan University, Taipei, Republic of China). *Republic of China, National Science Council, Proceedings, Part A: Applied Sciences,* vol. 5, Oct. 1981, p. 287-296. National Science Council of Republic of China Grant No. 70-0404-E002-09; NSF Grant No. ECS-80-06884.

The development of algorithms for computerized radar ice-imagery processing is presented. Initial attempts have involved the establishment of statistical parameters for discerning different ice features from the radar images. Radar imagery is gathered by either side-looking airborne radar (SLAR) or by synthetic aperture side-looking airborne radar (SAR), with coordinates chosen as azimuth (flight path) and range direction, the direction of sensing. SLAR produces a two-dimensional image of the reflectivity distribution of the ground, while higher resolution has allowed SAR applications in satellites. Seasat-1 SAR images are cited as examples for grey level categorization of surface features, and analysis indicates that mean and variance of grey levels serve best for classification. M.S.K.

A82-25139 **Multispectral texture.** A. Rosenfeld (Maryland, University, College Park, MD), A. Y. Wu (Maryland, University, College Park, MD; American University, Washington, DC), and C.-Y. Wang. *IEEE Transactions on Systems, Man, and Cybernetics,* vol. SMC-12, Jan.-Feb. 1982, p. 79-84. 5 refs. Grant No. AF-AFOSR-77-3271.

Textures in single-band images are often characterized by statistics of the joint distributions of pairs of gray levels for pairs of pixels in given relative positions, or by statistics of absolute gray level differences for such pairs of pixels. Joint distributions of pairs of spectral vectors in multiband images are cumbersome, since for k bands they are 2k-dimensional, but absolute difference distributions are less so, e.g., for two bands they are only two-dimensional. The possibility is discussed of using statistics of absolute difference distributions for characterizing textures in multiband images, with emphasis on the two-band case. (Author)

A82-25454 **Increase in correlation accuracy of remote sensing imagery by digital filtering.** M. Ehlers (Hannover, Universität, Hanover, West Germany). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Mar. 1982, p. 415-420. 8 refs.

For correlation of remote sensing photographs of Wetlands, a concept for rectification on a common reference image was developed at the University of Hanover. The results of two objective functions after previous filtering are compared to those obtained without filtering. It is shown that the accuracy and efficiency of the objective function at the correlation process is essentially increased by a low pass filter. (Author)

A82-25455 * **Modeling misregistration and related effects on multispectral classification.** F. C. Billingsley (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Mar. 1982, p. 421-430. Contract No. NAS7-100.

Misregistration is but one of a group of parameters (noise, class separability, spatial transient response, field sizes) affecting the accuracy of multispectral classification. The entire group must be considered simultaneously. Any noise in the measurements (due to the scene, to the sensor, or to the analog/digital conversion) will cause a finite fraction of the measurements to fall outside of the classification limits, even within nominally uniform fields. For field boundaries, where the effects of misregistration are felt, additional pixels will be misclassified due to the mixture of materials in the pixels. Misregistration causes field borders in a given (set of) band(s) to be closer than expected to a given pixel, causing additional pixels to be misclassified. Simplified models of the various effects are used to gain conceptual understanding and to estimate the performance to be expected. (Author)

A82-25456 * **Using known map category marginal frequencies to improve estimates of thematic map accuracy.** D. H. Card (NASA, Ames Research Center, Moffett Field, CA). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Mar. 1982, p. 431-439. 10 refs.

By means of two simple sampling plans suggested in the accuracy-assessment literature, it is shown how one can use knowledge of map-category relative sizes to improve estimates of various probabilities. The fact that maximum likelihood estimates of cell probabilities for the simple random sampling and map category-stratified sampling were identical has permitted a unified treatment of the contingency-table analysis. A rigorous analysis of the effect of sampling independently within map categories is made possible by results for the stratified case. It is noted that such matters as optimal sample size selection for the achievement of a desired level of precision in various estimators are irrelevant, since the estimators derived are valid irrespective of how sample sizes are chosen. O.C.

A82-26050 **A procedure for the interactive tracing of edges and lines by means of digital image processing (Ein Verfahren zur interaktiven Verfolgung von Kanten und Linien mit den Mitteln der Digitalen Bildverarbeitung).** B.-S. Schulz (Institut für angewandte Geodäsie, Frankfurt am Main, West Germany). *Bildmessung und Luftbildwesen,* vol. 50, Mar. 1, 1982, p. 69-79. 18 refs. In German.

The considered procedure is partly related to the realization that object boundaries in an aerial photograph can be determined only on the basis of density discontinuities. The method has been developed for the calculation and the tracing of edges. In the study of cartographic objects, a special case involves conditions in which object width and image element size are approximately equal. Such problems can also be solved with the aid of the reported method. The strategy of line tracing is considered, taking into account the utilization of a 3 x 3 matrix. A preprocessing step is employed to close small gaps automatically and to delete inadmissible line connections. With an arbitrary starting point on the line, the line is followed to the end or to a point where an interruption occurs. Aspects of method implementation are illustrated with the aid of specific examples. G.R.

A82-26726 † **Methods for the processing of synthetic-aperture radar signals when solving problems of the national economy /Review/ (Sposoby obrabotki signalov radiolokatorov s sinteziirovannoi aperturoi pri reshenii narodnokhoziaistvennykh zadach /Obzor/).** V. B. Shteinshleiger, A. N. Erkin, P. S. Lifanov, G. S. Misezhnikov, and A. V. Ianovich. *Radiotekhnika i Elektronika,* vol. 27, Feb. 1982, p. 193-213. 34 refs. In Russian.

The paper examines and compares various signal processing methods for synthetic-aperture radar systems used in the remote sensing of earth resources. Attention is given to optical processing, processing using CRTs with memory, and digital and hybrid processing. B.J.

A82-26840 **An automatic optimum kernel-size selection technique for edge enhancement.** P. Chavez, Jr. (U.S. Geological Survey, Flagstaff, AZ) and B. Bauer (U.S. Geological Survey, EROS Data Center, Sioux Falls, SD). *Remote Sensing of Environment,* vol. 12, Mar. 1982, p. 23-38. 5 refs. Research supported by the U.S.

07 DATA PROCESSING AND DISTRIBUTION SYSTEMS

Geological Survey.

An automatic optimum kernel-size selection technique for edge enhancement is presented, which is a correction for the modulation transfer function of an imaging system to a first order. The horizontal first difference is used to automatically select the optimum kernel size to enhance the edges contained in the image. The technique is easy to implement, works on a one-line-in/one-line-out basis, and the first difference and the subtractive rectangular filter are both efficient and simple. D.L.G.

A82-26841 **A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle.** W. S. Kowalik, S. E. Marsh (Stanford University, Stanford, CA; U.S. Geological Survey, Washington, DC), and R. J. P. Lyon (Stanford University, Stanford, CA). *Remote Sensing of Environment*, vol. 12, Mar. 1982, p. 39-55. 23 refs. Research supported by the U.S. Geological Survey.

A method for estimating the reflectance of ground sites from satellite radiance data is proposed and tested. The method uses the known ground reflectance from several sites and satellite data gathered over a wide range of solar zenith angles. The method was tested on each of 10 different Landsat images using 10 small sites in the Walker Lake, Nevada area. Plots of raw Landsat digital numbers (DNs) versus the cosine of the solar zenith angle (cos Z) for the test areas are linear, and the average correlation coefficients of the data for Landsat bands 4, 5, 6, and 7 are 0.94, 0.93, 0.94, and 0.94, respectively. Ground reflectance values for the 10 sites are proportional to the slope of the DN versus cos Z relation at each site. The slope of the DN versus cos Z relation for seven additional sites in Nevada and California were used to estimate the ground reflectances of those sites. The estimates for nearby sites are in error by an average of 1.2% and more distant sites are in error by 5.1%. The method can successfully estimate the reflectance of sites outside the original scene, but extrapolation of the reflectance estimation equations to other areas may violate assumptions of atmospheric homogeneity. (Author)

A82-27505 † **The effectiveness of instrumented visual studies of the earth from space (Ob effektivnosti vizual'no-instrumental'nykh issledovanii zemli iz kosmosa).** V. V. Kovalenok, A. D. Koval', and A. A. Tishchenko. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 39-49. In Russian.

Recommendations are presented on the equipment required for making visual observations of the earth's surface from orbital space stations. Attention is given to the effectiveness of human vision with regard to the interpretation, recognition, and study of various types of earth resources and terrestrial phenomena in a wide range of observation conditions. General criteria are developed for the quantitative assessment of the effectiveness of visual-observation systems. B.J.

A82-27587 # **Context dependent modeling.** P. R. Beaudet (Business and Technological Systems, Inc., Seabrook, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 145-164. 23 refs.

In connection with remote-sensing operations, the need arises to incorporate a priori knowledge in the interpretation of the digital images in order to gain complete understanding of the data that is present. This need to incorporate a priori knowledge is found in every part of the processing algorithm. As a consequence, context-dependent modeling is much utilized today as a means of incorporating a priori knowledge in the interpretation process. In most of the context-dependent work, the information extraction process is partitioned into a set of parallel feature extraction routines embedded in a decision tree network. The notion of context-dependent modeling, as it applies to processing algorithms, is considered along with the role of a priori knowledge, and data interpretive tools. G.R.

A82-27590 # **Operational resampling for correcting images to a geocoded format.** D. E. Friedmann (MacDonald, Dettwiler and Associates, Ltd., Richmond, British Columbia, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 195-212. 24 refs. Research supported by the Department of Industry, Trade and Commerce. DITC Project 534-3203.

Accompanying the improved satellite imagery provided in connection with new remote-sensing developments is the increasing compilation of detailed, geographically oriented data bases from disparate sources. Image correction must evolve to cope with the new sources of data. Precision processed images with map accuracies are now available for a variety of remote sensing applications. In connection with a study of the new developments, it becomes apparent that geometric correction must be expanded to yield satellite independent images. These geocoded images are precision images that have been rotated through the spacecraft heading angle so that they are aligned with the output map projection. Attention is given to the theoretical arguments for validating one-dimensional precision processing of imagery data from present and future sensors. It is shown that a radiometrically and geometrically accurate geocoded image can be obtained by a series of three one-dimensional resampling passes. G.R.

A82-27607 # **Towards an operational SPOT system - A preliminary assessment.** G. Brachet and P. Gonfreville (Centre National d'Etudes Spatiales, Paris, France). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 445-460.

A description is presented of the SPOT system, whose operation is scheduled to begin in 1984 and which comprises both earth observation satellites and ground stations offering the greatest achievable adherence to user requirements. The vertical and oblique viewing capability of the system will minimize the time interval between consecutive observations of the same area. Stereoscopic image pairs will be obtained by oblique observations of a given area during different satellite passes, and the 10-m resolution offered will permit operations on a 1/50,000-scale and even 1/25,000-scale, in some cases. It is expected that renewable resources management will gradually replace the creation of image data banks for mining and oil companies, which will represent the system's principal activity during its first years of existence. O.C.

A82-27623 # **Enhancement of Landsat data for Hudson Bay lowlands vegetation.** I. L. Johnston and P. J. Howarth (McMaster University, Hamilton, Ontario, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 623-633. 18 refs. Research supported by McMaster University; Natural Sciences and Engineering Research Council of Canada Grant No. A-5586.

The two basic methods of Landsat digital analysis include classification and enhancement. In classification, spectral data are statistically sorted and displayed as different colors or symbols on a CRT monitor or line printer. There are sometimes difficulties related to the assignment of a unique description or to interpretation. In order to overcome these problems, image enhancement has been developed as a second and complementary method of digital analysis. Image enhancement maximizes the visual information presented on the CRT monitor so that subtle details in the image are clearly displayed. The present investigation is concerned with the assessment of the capabilities of three Landsat digital enhancements to differentiate major land cover types in a remote subarctic environment, giving attention to linear contrast stretch, band ratioing, and video filtering. G.R.

A82-27625 # **An evaluation of the utility of smaller Landsat resolution elements /Resolution of Landsat resolution/.** R. F. Hyde, N. J. Vesper, and I. A. Goldblatt (Butler University, Indianapolis, IN). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 647-652.

The considered project has the objective to make definitive statements on the spatial resolution level requirements or the optimum pixel size for several of the high volume Landsat data user disciplines. Several issues are examined in anticipation of future and proposed satellite derived smaller pixels (or ground resolution levels). This is accomplished by the construction of a detailed database which combines the two technical philosophies associated with Landsat data analysis and application, with Geographic Information System database development. Aspects of methodology are considered. In connection with a discussion of data base construction, attention is given to design, encoding, and computer generating. Questions of aggregation to various pixel sizes are considered along with the assignment of reflectance values, the classification of each new pixel resolution, and the interpretation of aggregate levels. G.R.

A82-27626 # **The use of digital terrain model in the rectification of satellite-borne imagery.** F. Wong, R. Orth, and D. E. Friedmann (MacDonald, Dettwiler and Associates, Ltd.; Richmond, British Columbia, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 653-662. 8 refs. Research supported by the Industrial Research Assistance Program.

The present investigation is concerned with the precision geometric rectification of satellite-borne imagery, including correction for relief displacement with the use of a digital terrain model. While relief displacement error is small in Multispectral Scanner System (Landsats -1, -2, and -3) imagery, it will become significant in imagery from future sensors due to increased resolution (Thematic Mapper on Landsat-D) and off-nadir pointing capabilities (linear arrays on SPOT). It is shown how the slow varying geometric distortion correction can be separated from the fast varying relief displacement correction. Experiments illustrate that subpixel geometric rectification accuracy can be achieved even in areas of severe high relief provided an accurate digital terrain model is used during the correction process. G.R.

A82-27629 # **An approach to path radiance correction in MSS images.** M. Onitsuka, K. Ohta (National Research Institute for Pollution and Resources, Yatabe, Ibaraki, Japan), N. Okami (Institute of Physical and Chemical Research, Wako, Saitama, Japan), and J. R. Miller (York University, Downsview, Ontario, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 681-689. 10 refs.

Problems related to providing accurate corrections for atmospheric scattering are a major obstacle to the use of remote sensing for determining changes in water quality with time. In the present investigation, published path radiance determinations are used to derive relationships which describe the systematic variation in the path radiance. Empirical equations are derived to relate the path radiance in Landsat bands 4, 5, and 6 to the path radiance in band 7. The algorithms are applied to a number of Landsat images acquired over Japanese coastal waters. G.R.

A82-27636 # **Strategies and uses of small distributed analysis centers as in the natural resource inventory of Venezuela.** R. J. P. Lyon, K. Lanz (Stanford University, Stanford, CA), and R. Lairet (Ministerio del Ambiente y de los Recursos Naturales Renovables, Caracas, Venezuela). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 751-759.

A82-27651 # **Field-by-field multitemporal analysis of aerial scanner data geometrically corrected by means of a sliding model.** R. Jeansoulin, J.-C. Darcos, and G. Rigal (CNRS, Langages et Systèmes Informatiques; Toulouse, Ecole Nationale Supérieure d'Electrotechnique, d'Electronique, d'Informatique et d'Hydraulique, Toulouse, France). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 929-938. 6 refs. Research supported by the Centre National d'Etudes Spatiales.

Field-by-field multitemporal analysis is the geometrical processing of multitemporal images of a given scene through automatic registration and overlapping, with emphasis on the processing of information lying within the same geographical entity in order to obtain the population distribution function for every date. Two techniques are proposed to this end: (1) the sliding model, in which a sequence of local, simple and independent models of the relative deformation is computed and adjacent local models are joined by sliding processing; and (2) the field-by-field correction method, which is based on the segmentation of intersecting areas into a reference image, and the assessment of the same area at different dates through computation of local relative deformation with the minimum number of nearest neighbors among the registered control points. O.C.

A82-27654 # **Effect of aerosols on optical remotely sensed data.** W. G. Egan (Grumman Aerospace Corp., Research Dept., Bethpage, NY) and G. E. Shaw (Alaska, University, Fairbanks, AK). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 959-973. 23 refs.

It has been found possible to validate and determine certain characteristics of atmospheric aerosols, as well as to typify their effects, in major experimental tests of two complementary aerosol modeling approaches: (1) the Dave (1972) radiative transfer program, applied to the Caribbean area of St. Thomas in 1972, and (2) the constrained linear inversion method, applied to the continental area of Ft. Collins, Colorado, in 1980. The aerosol optical thickness at 0.5-micron wavelength over Ft. Collins was about 0.07, and about 0.12 over St. Thomas. It is concluded that, by using ground-based observations, the Dave model provides detailed angular variation of sky radiance and solar flux to + or - 20% away from the solar aureole, while the constrained linear inversion model furnishes path-averaged optical depth to + or - 3%, and total downwelling diffuse radiation to + or - 1%, as well as aerosol size distribution. O.C.

A82-27655 # **HCMM night-time thermal IR imaging experiment in Michigan.** R. K. Vincent, J. B. Parrish, D. H. Coupland (Geospectra Corp., Ann Arbor, MI), and E. Jaworski (Eastern Michigan University, Ypsilanti, MI). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 975-980, 983, 984. 7 refs.

The Heat Capacity Mapping Mission satellite's 10.5-12.5-micron thermal IR channel obtained a color level-sliced image of Michigan during an August 21, 1978 overpass. Surface water, including most of the Great Lakes, was warmer than the land mass, and two area types in the southern peninsula of Michigan appear unusually cool: (1) forested valley areas with high soil infiltration rates, in the north-central region; and (2) small, flat, swampy areas in Sanilac County associated with peat bogs. Comparison with actual reported temperatures show an underestimation of temperature by the satellite of up to 8 C, perhaps due to atmospheric effects. O.C.

A82-27666 * # **ELAS - A geobased information system that is transferable to several computers.** S. L. Whitley, R. W. Pearson, B. R. Seyfarth, and M. H. Graham (NASA, National Space Technology Laboratories, Earth Resources Laboratory, Bay St. Louis, MS). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1091-1098.

In the early years of remote sensing, emphasis was placed on the processing and analysis of data from a single multispectral sensor, such as the Landsat Multispectral Scanner System (MSS). However, in connection with attempts to use the data for resource management, it was realized that many deficiencies existed in single data sets. A need was established to geographically reference the MSS data and to register with it data from disparate sources. Technological transfer activities have required systems concepts that can be easily transferred to computers of different types in other organizations. ELAS (Earth Resources Laboratory Applications Software), a geographically based information system, was developed to meet the considered needs. ELAS accepts data from a variety of sources. It contains programs to geographically reference the data to the Universal Transverse Mercator grid. One of the primary functions of ELAS is to produce a surface cover map. G.R.

07 DATA PROCESSING AND DISTRIBUTION SYSTEMS

A82-27667 # Flexible processing of remote sensing data through integration of image processing and geobased information systems. W. A. Hallada (Computer Sciences Corp., Silver Spring, MD), F. C. Mertz, L. R. Tinney, M. J. Cosentino, and J. E. Estes (California, University, Santa Barbara, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1099-1111. 13 refs.

Integrating image processing and geobased information systems (GBIS) provides the analyst with many new options and opportunities for processing and using remotely sensed data. Even when remote sensing can provide a crucial input to an analysis, it is not uncommon for this input to be only one of many that must be considered. In a similar manner, many types of data (e.g. terrain and soils) can be very useful when deriving products from remotely sensed data. Research to date indicates that a systems concept employing geobased system and image processing technologies provides a flexible means of analyzing remotely sensed data for purposes of preprocessing, stratification, classification, and modeling. This paper presents examples of the use of an image based information system (IBIS) that allows the spatial integration of remotely sensed imagery with other types of geobased data. An automated cluster labeling procedure, an automated land management system, and an automated fire information management system are discussed within this paper. (Author)

A82-27671 # Interpretation of Heat Capacity Mapping Mission images over Canada. J. Cihlar (Canada Centre for Remote Sensing, Applications Div., Ottawa, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1141-1152.

The influence of atmospheric and land surface variables on day and night Heat Capacity Mapping Mission (HCMM) thermal infrared data collected over two Canadian sites is analyzed for confirmation of the thermal inertia concept. Visual analysis of many images and digital nighttime apparent land temperature distribution was dominated by the near-surface air temperature and that the effects of typography, wind, and land cover were primarily indirect. In the daytime, surface cover was the most important variable, mainly because of the role of water in relation to cover type. The effect of soil moisture was very weak. Except for the land/water contrast, surface temperature differences were relatively small. Cloud cover was the dominant feature of daytime and nighttime thermal infrared images. (Author)

A82-27677 # Classification of Landsat MSS data for surface cover of small areas. Y. J. Chong, A. C. Yeo, and V. K. Vong (National University of Singapore, Singapore). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1219-1225.

Multispectral scanner data acquired by Landsat 1, 2 and 3 have been studied for path 137 row 56 and path 137 row 57. Software has been developed to process the computer compatible tapes on a user terminal of a general purpose mini-computer utilizing only the standard input/output peripherals. Spectral classification of the data is done by identifying clusters in a four-dimensional vector space. An area of the sea in the vicinity of a tidal gauge station is chosen for study, both at high tide and at low tide. When the classified data is compared with a hydrographic map water depth boundaries are clearly discernible, even though the water in the area being influenced by river discharges is not particularly clear. A82-27685 # An analysis of user requirements for operational land satellite data. G. W. Spann, N. J. Hooper (Metrics, Inc., Atlanta, GA), and D. J. Cotter (NOAA, National Earth Satellite Service, Washington, DC). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1297-1303.

The National Oceanic and Atmospheric Administration/National Earth Satellite Service (NOAA/NESS), as the agency designated to implement and manage the U.S. operational land remote sensing satellite system, conducted a survey in March, 1980, to determine user needs for land satellite data in the context of an operational system. Analysis of the survey responses indicates that the operational requirements of most users can be met by data similar to that which can be provided by the MSS and/or TM instruments developed by NASA in the Landsat program. The analysis further indicates that users emphasize the timely, reliable delivery of data products as the essential element of an operational land satellite system. (Author)

A82-27686 * # Precision in the evaluation of Landsat autocorrelation - The terrain effect. R. G. Craig (Kent State University, Kent, OH). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1305-1314. 14 refs. Contract No. NAS5-26111.

The autocorrelation present in Landsat data can be described by a two-parameter model. Presence of this autocorrelation seriously inflates estimates of the variance of a set of pixels. The degree of inflation is always serious but varies markedly according to the values of the parameters phi and Theta. Thus corrections of the effects of the model require precise estimates of these parameters. Two hypotheses are proposed to explain the variation of phi with location. Several lines of evidence are presented which support the idea that phi is induced directly by the autocorrelation structure of the terrain being sensed. It is suggested that use of this relation will allow economical estimates of phi for any scene of interest. (Author)

A82-27688 # Natural resources inventories by computer-satellite mapping techniques in Chaco State, Argentine Republic, South America. A. V. Gustin (State Institute of Ecology, Natural Resources and Technology, Resistencia, Chaco, Argentina) and L. L. Ledesma (National Institute of Agro-Technology, Roque Saénz Peña, Chaco, Argentina; Stanford University, San Francisco, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1327-1338. 9 refs. Research supported by the Quebracho Extract National Commission.

Information from satellites Landsat 1 and Landsat 2, launched by NASA in 1972 and 1975, were used to survey natural resources in Chaco State, Argentine. In order to get map representation by a digital system, computer processing was done defining spectral characteristics (Honey curves) which were used as survey patterns in the digital analysis. Results of this procedure are 1:100,000 and 1:25,000 dotprints maps and slides in false color, with band combination (4, 5, 6, 7). The multispectral analysis of Landsat C.C.T. data has shown to be useful for the characterization and correlation (based on field data, frames interpretation and aerial photo interpretation) for surveying and mapping natural resources in this State, because the site spectral values are well segregated by their own natural characteristics. (Author)

A82-27689 * # Ground level reflectance measurement techniques - An evaluation with emphasis on the importance of spectral calibration. M. J. Duggin (New York, State University, Syracuse, NY) and W. R. Philipson (Cornell University, Ithaca, NY). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1339-1352. 36 refs. Research supported by the U.S. Department of Agriculture; Grant No. NGL-33-010-171.

The bandpasses, overflight conditions, and sensor geometry that will provide optimum target discrimination in remote-sensing studies can be determined only from spectral reflectance measurements made for various sun-target-sensor geometries, supplemented by model calculations which can be checked against field data. The accurate measurement of ground reflectance properties is critical to the design of future sensors and to the determination of imaging conditions. The current investigation has the objective to review typical methods of measuring spectral reflectance, to point out some of the problems inherent to reflectance measuring techniques, and to present a method of checking measurement accuracy. A82-27698 # Visual and digital analysis of H.C.M.M. data over eastern Canada. F. Bonn, M. Bernier, and R. Brochu (Sherbrooke, Université, Sherbrooke, Québec, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1449-1463. 21 refs. Natural Sciences and Engineering Council Grant No. A-6043.

It is pointed out that the Heat Capacity Mapping Mission (HCMM) has generated a great conceptual and research interest due to its theoretical ability to map subsurface features which were up to now invisible to sensors. A satellite equipped with a thermal channel providing a 12 hour coverage at adequate passing times might be of great value to investigators interested in physical aspects of rocks, soils, and water. The present analysis is concerned with two HCMM scenes, which were acquired on June 6th, 1978 over Montreal and Lake Ontario, and on September 19th, 1978 over the St. Lawrence Valley. A visual analysis of the images is considered, taking into account geology and geomorphology, topography and climate, landuse and human activities, and hydrology and water surfaces. Attention is given to day and night images, the temperature difference image, the thermal inertia image, the digital analysis of a subimage, and observed features unique to HCMM. G.R.

A82-27923 # The role of computer graphics in geographic research. F. T. Aldrich (Arizona State University, Tempe, AZ). In: Computer Graphics Symposium, Phoenix, AZ, April 24, 1982, Proceedings. New York, American Institute of Aeronautics and Astronautics, 1982, p. 38-41. 7 refs.

This paper discusses the way in which a geographer views computer graphics and the role this media plays in applied spatial research. A background perspective is presented which gives the scope of geographic research tasks and a discussion of manual cartographic displays, their characteristics and limitations. Advantages of digital production of conventional graphics is presented as well as a documenting of new capabilities available only by utilizing the media of computer graphics. These new capabilities involved the use of whole surface displays using perspective views, stereo perspective, and 'photogrammetric' surfaces. (Author)

A82-28141 † Correlation identification of stellar configurations for purposes of the coordinate referencing of aerial and space images (Korreliatsionnoe otozhdestvlenie zvezdnykh konfiguratsii dlia tselei koordinatnoi priviazki aerokosmicheskikh snimkov). V. K. Zlobin and V. N. Kobzev. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 83-88. 8 refs. In Russian.

Correlation algorithms are proposed for the identification of stellar configurations in the coordinate referencing of aerial and space remote-sensing images. In order to reduce the number of required computations, an image of the correlation-field fragment is constructed, and a search is carried out for the maximum of the cross correlation function of the real image and the reference image. B.J.

A82-28143 † Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography (Osobennosti ispol'zovaniia lazernykh zerkal'nykh skanatorov dlia obrabotki izobrazhenii v kartografii i aerofotos'emke). I. M. Kol'tsov, V. P. Mikheev, and B. S. Rozov. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 94-99. In Russian.

A special-purpose laser-mirror scanner for the processing of aerial photographs is described. The system provides for synphase scanning of two photographs per line, whose length varies automatically from 0.5 to 10 mm. The size of the scanning spot varies from 30 to 300 mm, while the rms error of the position of the raster centers is about 3 microns. A schematic diagram of the scanning system is presented, and the basic characteristics of the scanner are given. B.J.

A82-28144 † Construction of digital models of statistically uniform characteristics on the basis of multispectral space imagery (Postroenie tsifrovykh modelei statisticheski odnorodnykh kharakteristik po spektrozonal'nym kosmicheskim materialam). N. P. Lavrova and G. Ia. Globa. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 99-108. In Russian.

The development of digital terrain models on the basis of multispectral remote-sensing data is considered. It is found that partial multispectral images can be subjected to statistical treatment using microphotometer data. Digital models are constructed for a portion of terrain having statistically uniform characteristics. B.J.

A82-28146 † Construction of a mathematical model for the recognition of identical images on a pair of photographs (O postroenii matematicheskoi modeli opoznavaniia identichnykh izobrazhenii na pare snimkov). I. G. Zhurkin. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) A82-28343 Earth-scanning satellites lead resource hunt. P. Kinnucan. *High Technology,* vol. 2, Mar.-Apr. 1982, p. 53-60.

Technology to be used for the acquisition of satellite imagery for earth resources applications is discussed. Advanced earth resource satellites to be launched in the 1980s by the United States, France and Japan will incorporate technical innovations increasing the value of satellite imagery for the mapping and monitoring of crops, mineral and petroleum deposits and other resources, including the Thematic Mapper to be carried on board the Landsat D satellites, data relay satellites to be used for image transmission to the ground, the pushbroom scanner to be used on the French SPOT satellites to provide high-resolution panchromatic and stereo images, and night and all-weather coverage offered by radar imaging from the Japanese ERS satellites. These technical innovations, however, raise sensitive issues concerning the need for specialized agricultural and geological satellites, the private operation of the Landsat satellites, the restriction of access to satellite data and national defense. A.L.W.

A82-28467 † Improving the quality of aerial photography /Concerning the 'Basic principles of aerial photography'/ (Povyshat' kachestvo aerofotos'emochnykh rabot /K Vypusku osnovnykh polozhenii po aerofotos'emke/). A. G. Vanin and Iu. I. Poletaev. *Geodeziia i Kartografiia,* Feb. 1982, p. 45-48. In Russian.

The paper reviews the contents of the normative document 'Basic principles of aerial photography', issued by the Krasovskii Institute of Geodesy, Cartography, and Aerial Photography. Particular consideration is given to techniques for improving the quality of aerial photography. B.J.

A82-28468 † Classification of systems for digital terrain simulation (K voprosu klassifikatsii sistem tsifrovogo modelirovaniia rel'efa mestnosti). A. S. Vasmut, A. V. Gusev, and Iu. A. Kravchenko. *Geodeziia i Kartografiia,* Feb. 1982, p. 53-57. 6 refs. In Russian.

A classification scheme for digital terrain models is examined. Particular attention is given to the three main classification characteristics: (1) data structures (the makeup and organization of terrain data interrelationships); (2) mathematical methods (i.e., recovery of relief at the required point); and (3) algorithms of data transformation. Interpolation methods for digital terrain models are considered. B.J.

WETLAND MAPPING FROM DIGITIZED AERIAL PHOTOGRAPHY

F. L. Scarpace, B. K. Quirk, R. W. Kiefer, and S. L. Wynn, Principal Investigators [1982] 31 p refs Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198. ERTS
(E82-10019; NASA-CR-164816) Avail: NTIS HC A03/MF A01 CSCL 08B

Aerial photographic imagery of the Sheboygan Marsh in Wisconsin was scanned through three different narrow band interference filters centered at .45, .55, and .65 micrometers. The output data was transformed into log exposures and corrected for lens fall-off. The scanned area was approximately 253 hectares, with each pixel representing an area of 6.0 meters square on the ground. Training sets were extracted from the digital file of the imagery using the map generated from the photointerpretation and computer generated character displays from the digital file as first approximations. From these training sets, statistics were generated to be used with an elliptical classifier. The classifier generated a digital file from which color coded thematic representations of the classifications could be produced. A two stage table-look-up elliptical algorithm was used as the classification procedure. The wetland boundary was easily delineated, but there was difficulty in mapping the boundaries of vegetation within the wetland. A.R.H.

SIMPLIFIED ALGORITHM FOR CALCULATING RADIATIVE TRANSFER IN SATELLITE IMAGES [ALGORITMO SIMPLIFICADO PARA CALCULO DE TRANSFERENCIA RADIATIVA EM IMAGENS DE SATELITE]

L. A. V. Dias, A. E. C. Pereira, and G. Camara Jul. 1981 17 p refs In PORTUGUESE; ENGLISH abstract Presented at the 33rd Reuniao Anual da SBPC, 8-15 Jul. 1981, Salvador, Brazil
(INPE-2169-RPE/385) Avail: NTIS HC A02/MF A01

Temporal variations of Earth's atmosphere may cause problems on remote sensing data analysis of satellites, such as LANDSAT, SKYLAB and NIMBUS-7. The apparent radiance of surface features which an orbiting spacecraft measures differs from the intrinsic surface radiance of the object, due to the presence of the intervening atmosphere of Earth. An algorithm for atmospheric correction is presented. J.D.H.

USAGE AND LIMITATIONS OF CHARACTERISTIC VECTOR ANALYSIS OF REMOTE SENSING MULTISPECTRAL DATA FOR THE IDENTIFICATION AND QUANTIFICATION OF WATER QUALITY PARAMETERS Ph.D. Thesis

Theodore A. Talay 1981 394 p
Avail: Univ. Microfilms Order No. 8128308

Characteristic vector analysis is investigated to determine how it resolves total radiance signals measured by a remote sensor into eigenvectors and associated scalar coefficients and their relationships to the identification and quantification of the in situ water constituents. Technique operation is checked against a progression of hypothetical test cases and a limited number of laboratory data sets. Under ideal conditions, characteristic vector analysis has the potential of identifying and quantifying individual constituents in water, even when in mixtures, with a minimum of surface truth data. Exact constituent identification, using characteristic vectors, and quantification, by scaling a scalar coefficients, is possible when the study constituents have a linear radiance concentration relationship, superimpose linearly in mixtures, and the measured radiance spectra are devoid of noise and atmospheric effects. As these conditions are relaxed, technique limitations and inexact solutions are encountered. Dissert. Abstr.

AUTOMATIC RELOCATION OF GROUND CONTROL POINTS IN LANDSAT IMAGERY

A. H. Benny 5 Jun. 1981 37 p refs
(RAE-TR-81071; RAE-Space-598; BR80598) Copyright. Avail: Issuing Activity

A computer program which relocates ground control points (GCP), used in the geometric transformation of satellite pictures is discussed. The GCP's are first located manually on the image and a map. A transformation matrix enables image locations to

be converted to map references. For subsequent images, the identity of a first GCP and an indication (not necessarily precise) of its position in the new image enable a spiral search to locate that GCP and then all the others. Accuracy of + or - 0.4 pixel is obtained for LANDSAT pictures. For similar seasons, proportion relocated approaches 100%. In worst cases (6 months difference between images, with snow in the second) 60% is achieved.

Satellite data image products potentially useful in solving Earth resource and environmental problems are described. Sources for satellite data and user information are given. Recommendations for suitability of use of data from each satellite are presented. Satellite sources of Earth resources data are summarized for satellites launched since 1965 and those projected for launch through the late 1980s. The sensors of interest on each satellite, the wavelength or frequency of operation, and the resolution are given. Color ranges are illustrated and compared. The form and utility of aircraft and LANDSAT images are compared. Data from the Gemini-Apollo photography, Skylab, meteorological satellites, the Heat Capacity Mapping Mission, the Coastal Zone Color Scanner, Seasat, LANDSAT, and projected future satellites are briefly described.

HC A02/MF A01 CSCL 08H

The use of LANDSAT multispectral scanner images from 1975 to 1979 to determine pollution dispersion in the central basin of the lagoon under varying tidal conditions is described. Images taken during the late spring and representing both short and long range tidal dynamics were processed for partial haze removal and removal of residual striping. Selected spectral bands were correlated to different types of turbid water. The multitemporal data was calibrated, classified considering sea truth data, and evaluated. The classification differentiated tide diffusion, algae belts, and industrial, agricultural, and urban turbidity distributions. Pollution concentration is derived during the short time interval between inflow and outflow and from the distance between the two lagoon inlets and the industrial zones. Increasing pollution of the lagoon is indicated.

(E82-10038; NASA-TM-82098) Avail: NTIS
HC A03/MF A01 CSCL 05B

Two unsupervised classification procedures were applied to ratioed and unratioed LANDSAT multispectral scanner data of an area of spatially complex vegetation and terrain. An objective accuracy assessment was undertaken on each classification and comparison was made of the classification accuracies. The two unsupervised procedures use the same clustering algorithm. By on procedure the entire area is clustered and by the other a representative sample of the area is clustered and the resulting statistics are extrapolated to the remaining area using a maximum likelihood classifier. Explanation is given of the major steps in the classification procedures including image preprocessing; classification; interpretation of cluster classes; and accuracy assessment. Of the four classifications undertaken, the monocluster block approach on the unratioed data gave the highest accuracy of 80% for five coarse cover classes. This accuracy was increased to 84% by applying a 3 x 3 contextual filter to the classified image. A detailed description and partial explanation is provided for the major misclassification. The classification of the unratioed data produced higher pecentage accuracies than for the ratioed data and the monocluster block approach gave higher accuracies than clustering the entire area. The moncluster block approach was additionally the most economical in terms of computing time.

(E82-10042; NASA-CR-164919) Avail: NTIS
HC A02/MF A01 CSCL 08M

Supplementary data including photographs as well as topographic, geologic, and soil maps were obtained and evaluated for ground truth purposes and control point selection. A study area (approximately 450 by 450 pixels) was subset from LANDSAT scene No. 2477-17142. Geometric corrections and scaling were performed. Initial enhancement techniques were initiated to aid control point selection and soils interpretation. The SUBSET program was modified to read HCMM tapes and HCMM data were reformated so that they are compatible with the ORSER system. Initial NMAP products of geometrically corrected and scaled raw data tapes (unregistered) of the study were produced.

HC A02/MF A01 CSCL 05B

The location and migration of cloud, land and water features were examined in spectral space (reflective VIS vs. emissive IR). Daytime HCMM data showed two distinct types of cloud affected pixels in the south Texas test area. High altitude cirrus and/or cirrostratus and 'subvisible cirrus' (SCi) reflected the same or only slightly more than land features. In the emissive band, the digital counts ranged from 1 to over 75 and overlapped land features. Pixels consisting of cumulus clouds, or of mixed cumulus and landscape, clustered in a different area of spectral space than the high altitude cloud pixels. Cumulus affected pixels were more reflective than land and water pixels. In August the high altitude clouds and SCi were more emissive than similar clouds were in July. Four-channel TIROS-N data were examined with the objective of developing a multispectral screening technique for removing SCi contaminated data.

HC A02/MF A01 CSCL 08G

Processing continued on the data set covering the first three months of the mission. Orbits were selected over a specified range of longitude and latitude and those orbits falling within the geographical boundaries were stored on a disk and a listing made. To verify the quality of the data, plots were made showing altitude vs latitude, anomalous field vs latitude, and corrected anomalous field vs latitude. Results of the plotting showed that: (1) data from the first day of the mission are not usable because they are too noisy; (2) some orbits contain spikes, no doubt a processing error on the tape; (3) some orbits contain a 20 deg region in latitude, offset roughly 30 nT from the rest of the anomalous field profiles; and (4) the correlation between the adjacent orbits is poor. Even the new ring current coefficients provided with a later, corrected set of data tapes did not not yield the desired correlations. A.R.H.

Day/night Heat Capacity Mapping Mission image pairs over Kansas and Indiana were used to examine the spatial variation of moisture availability on the mesoscale. Of particular concern was whether patterns of moisture availability and thermal inertia, as well as surface heat fluxes, respond to significant spatial variations in the rainfall pattern. A temperature analysis for the Indiana case is presented. M.G.

AN INFORMATION ADAPTIVE SYSTEM STUDY REPORT AND DEVELOPMENT PLAN
William S. Ataras, Kenneth Eng, John J. Morone, Paul R. Beaudet, and Roland Chin 9 May 1980 225 p
(Contract NAS5-25668)
(NASA-CR-166768; BTS-FR-80-117) Avail: NTIS HC A10/MF A01 CSCL 05B

The purpose of the information adaptive system (IAS) study was to determine how some selected Earth resource applications may be processed onboard a spacecraft and to provide a detailed preliminary IAS design for these applications. Detailed investigations of a number of applications were conducted with regard to IAS and three were selected for further analysis. Areas of future research and development include algorithmic specifications, system design specifications, and IAS recommended time lines. N.W.

THE EFFECT OF FINITE FIELD SIZE ON CLASSIFICATION AND ATMOSPHERIC CORRECTION
Yoram J. Kaufman and Robert S. Fraser Sep. 1981 53 p refs
(NASA-TM-83818) Avail: NTIS HC A04/MF A01 CSCL 20F

The atmospheric effect on the upward radiance of sunlight scattered from the Earth-atmosphere system is strongly influenced by the contrasts between fields and their sizes. For a given atmospheric turbidity, the atmospheric effect on classification of surface features is much stronger for nonuniform surfaces than for uniform surfaces. Therefore, the classification accuracy of agricultural fields and urban areas is dependent not only on the optical characteristics of the atmosphere, but also on the size of the surface do not account for the nonuniformity of the surface have only a slight effect on the classification accuracy in other cases the classification accuracy descreases. The radiances above finite fields were computed to simulate radiances measured by a satellite. A simulation case including 11 agricultural fields and four natural fields (water, soil, savanah, and forest) was used to test the effect of the size of the background reflectance and the optical thickness of the atmosphere on classification accuracy. It is concluded that new atmospheric correction methods, which take into account the finite size of the fields, have to be developed to improve significantly the classification accuracy. Author

STUDY OF EARTH RESOURCES SATELLITE (ERS) DATA REDUCTION UNIT
C. J. Collins, comp., F. A. C. Burke, comp., J. W. Pengelly, comp., P. Redstone, comp. (Logica Ltd.), C. Burrows, comp. (Logica Ltd.), and N. McEvoy, comp. (Logica Ltd.) Paris ESA Aug. 1981 188 p refs
(Contract ESA-4415/80/NL-PP(SC))
(BAe-TP-7905; ESA-CR(P)-1478) Avail: NTIS HC A09/MF A01

Techniques for reducing onboard, by a factor of 4, the data rate from imaging instruments on Earth resources satellites, especially from the ocean color monitor on ERS 1, were examined. Theoretical analysis and simulation with real images allow algorithms to be defined for implementation assessment. A tradeoff based on performance and engineering criteria shows that spatial resolution degrading unit (SRDU) and a fixed weight spectral transform followed by a Rice Machine (FWST + RM2) meet reduction criteria within the mass and power constraints. Costs (two model program) are comparable, the greater complexity of FWST + RM2 being largely offset by more advanced technology in SRDU. Before either option is adopted, further simulation and breadboarding are recommended. Author (ESA)

DATA RATE REDUCTION. IMPACT OF IMAGE DATA COMPRESSION ON END TO END DATA MANAGEMENT OF A MULTISPECTRAL PAYLOAD
G. E. Lowitz, J. M. Vivier, J. P. Camus, and B. H. Roy Paris ESA Jul. 1980 51 p refs
(Contract ESTEC-3749/78)
(Rept-44/130; ESA-CR(P)-1507) Avail: NTIS HC A04/MF A01

Satellite onboard data compression by clustering in the raw channels with a variable number of classes is discussed. The effect on the overall image chain is illustrated by land applications satellite system (LASS) data and LANDSAT ground stations processing and dissemination systems. Image quality, processing costs, software and hardware are considered. Onboard mechanization is efficient and the compression principles benefit user interpretation routines such as classification. Compressed data can be processed efficiently, yielding cost savings on the order of 100 to 1. A 512 X 512 pixel frame, including preprocessing, is treated in 5 min. The compressed imagery can be recognized, zones can be located and cloud cover can be assessed, making high quality quick looks possible. Author (ESA)

ON THE ACCURACY OF THERMAL INERTIA MAPPING BY INFRARED IMAGERY
Sune R. J. Axelsson 1981 20 p refs
(SAAB-REPR-AE-10) Avail: NTIS HC A02/MF A01

The influence of different interfering parameters on the estimation of the thermal inertia of the ground from the diurnal variations of the surface, temperature, using thermal infrared and albedo measuring imagery, was investigated. The strong influence of these parameters degrades the accuracy of the analysis and makes the interpretation complex. This influence was studied, starting from an improved analytic model of the surface temperature of a periodically heated ground surface. The errors in albedo and atmospheric heat exchange, and the limited accuracy of sensors and the model used in data processing, dominate the thermal inertia error. Further reductions of the accuracy are due to the translation of the thermal inertia map into user data like soil type, porosity and soil moisture. Upper bounds on the potential thermal inertia mapping accuracy are found by calculating the estimation error when the interfering parameters are known with specified accuracy. Author (ESA)

THE DEVELOPMENT AND TESTING OF METHODS TO INFER MIDLATITUDE PRECIPITATION INTENSITY FROM GEOSYNCHRONOUS SATELLITE INFRARED DATA
John V. Zapotocny, Donald R. Johnson, and Thomas M. Whittaker Hanscom AFB, Mass. AFGL 31 Jul. 1981 90 p refs
(Contract F19628-78-C-0137; AF Proj. 6670)
(AD-A106881; SCIENTIFIC-3; AFGL-TR-81-0252) Avail: NTIS HC A05/MF A01 CSCL 04/2

In an attempt to aid development of simple techniques applicable in middle latitudes, this study addresses the inference of precipitation intensity and its temporal change associated with imbedded convective activity at a location in areas of continuous stratiform precipitation from Geosynchronous Operational Environmental Satellite (GOES) IR digital data. Imbedded convective activity is easily identified in high resolution visible GOES imagery if high cloud layers are not present to obscure the convection. At low Sun angles with the shadowing effect of the convective towers, details of these convective areas are especially enhanced. However, with the need for these methods to be applicable during both daytime and nighttime hours, only the IR 11 micron channel data were used in this study which was based on several synoptic cases. In each of the cases examined, visible and IR imagery and loops were used to help pinpoint optimum areas for study. GRA

The LANDSAT system, operated in the country by CNPg/INPE since 1973, systematically acquires, produces, and distributes both multispectral and panchromatic images obtained through remote sensing satellites to thousands of researchers and technicians involved in the natural resources survey. To cooperate in the solution of national problems, CNPq/INPE is developing efforts in the area of manipulation of those images with the objective of making them useful as planimetric bases for the simple revision of already published maps or for its utilization as basic material in regions not yet reliability mapped. The results obtained from performed tests are presented and the existing limitations are discussed. The new system purchased to handle data from the next series of LANDSAT as well as from MAPSAT and SPOT which will be in operation within the 80's decade, and are designed not only for natural resources survey but also for the solution of cartographic problems. (E82-10081; NASA-CR-168402; NAS 1.26:168402; INPE-2170-RPE/386) Avail: NTIS HC A02/MF A01 CSCL 05B

A method for utilizing both spectral and spatial redundancy in compacting and preclassifying images is presented. In multispectral satellite images, a high correlation exists between neighboring image points which tend to occupy dense and restricted regions of the feature space. The image is divided into windows of the same size where the clustering is made. The classes obtained in several neighboring windows are clustered, and then again successively clustered until only one region corresponding to the whole image is obtained. By employing this algorithm only a few points are considered in each clustering, thus reducing computational effort. The method is illustrated as applied to LANDSAT images. J.D.H.

COMPUTER-ASSISTED PHOTO INTERPRETATION RESEARCH AT USAETL
George E. Lukes 21 Apr. 1981 14 p refs
(AD-A109366; ETL-R028) Avail: NTIS HC A02/MF A01 CSCL 08/5

A program in computer-assisted photo interpretation research (CAPIR) has been initiated at the U.S. Army Engineer Topographic Laboratories. In a new laboratory, a photo interpreter (PI) analyzing high-resolution, aerial photography interfaces directly to a digital computer and geographic information system (GIS). A modified analytical plotter enables the PI to transmit encoded three dimensional spatial data from the stereomodel to the computer. Computer-generated graphics are displayed in the stereomodel for direct feedback of digital spatial data to the PI. Initial CAPIR capabilities include point positioning, mensuration, stereoscopic area search, GIS creation and playback, and elevation data extraction. New capabilities under development include stereographic superposition, a digital image workstation, and integration of panoramic Optical Bar Camera photography as a primary GIS data source. This project has been conceived as an evolutionary approach to the digital cartographic feature extraction problem. As a working feature extraction system, the CAPIR laboratory can serve as a testbed for new concepts emerging from image understanding and knowledge-based systems research. GRA

CONTEXT SENSITIVE FORMULATIONS OF ANTENNA PATTERN CORRECTION AND SIDE LOBE COMPENSATION FOR NOSS/LAMMR REAL TIME PROCESSING Final Report
Roland T. Chin and Paul R. Beaudet 7 Oct. 1981 157 p
(Contract NAS5-26541)
(NASA-CR-166789; NAS 1.26:166789; BTS-FR-81-165) Avail: NTIS HC A08/MF A01 CSCL 20N

Large antenna multi-channel microwave radiometer (LAMMR) software specifications were written for LAMMR ground processing. There is a need to determine more computationally-efficient antenna temperature correction methods in compensating side lobe contributions especially near continents, islands and weather fronts. One of the major conclusions was that the antenna pattern corrections (APC) processes did not accomplish the implied goals of compensating for the antenna side lobe influences on brightness temperature. A-priori knowledge of land/water locations was shown to be needed and had to be incorporated in a context sensitive APC process if the artifacts caused by land presence is to be avoided. The high temperatures in land regions can severely bias the lower ocean response. R.J.F.

DIRECT DETERMINATION OF THE TWO DIMENSIONAL IMAGE SPECTRUM FROM RAW SYNTHETIC APERTURE RADAR DATA
P. Martin *In* ESA SAR Image Quality Jun. 1981 p 81-87 refs Submitted for publication

Avail: NTIS HC A05/MF A01; ESA, Paris FF 55 (US $12)

An algorithm is described which computes the two-dimensional Fourier transform of a synthetic aperture radar image. This method is intended to replace the whole SAR processing and the two-dimensional Fourier transformation by a specialized processing scheme which, in terms of computational speed and complexity, will be of the order of a single two-dimensional autocorrelation. This processing approach is applied to the estimation of the wave directional spectrum from the raw data of the SAR sensor of SEASAT-1. Author (ESA)

THE DESIGN AND IMPLEMENTATION OF AN OPERATIONAL, COMPUTER-BASED WEATHER RADAR SYSTEM
A. P. Ball, J. L. Clarke, M. J. Brien, A. H. Shaw, S. E. Trigg, and T. A. Vollier 1979 94 p refs Original contains color illustrations
(RSRE-MEMO-3151; BR71459) Avail: NTIS HC A05/MF A01

A system that provides quantitative rainfall data is described. It consists of an on-site PDP-11/40 computer used to process digitized radar data from a narrow beam, fully steerable radar aerial. The data are collected at several low elevation angles. The radar amplitude signals received are digitized and transferred to the computer by a special purpose radar signal averaging unit (RSAU). After processing, the signals are displayed as a color coded, Cartesian map of instantaneous rainfall rate and distribution on a modified color TV via a special data store. Similar data can be transmitted via the DATEL service to users remote from the radar and to a network center computer where a composited color TV picture of data is displayed. Hardware and software are described in detail. Author (ESA)

AN INTRODUCTION TO IMAGE PROCESSING AT ROYAL AIRCRAFT ESTABLISHMENT, FARNBOROUGH, ENGLAND
G. J. Davison London HMSO Sep. 1980 26 p refs
(RAE-TR-80107; RAE-SPACE-585; BR76808) Avail: NTIS HC A03/MF A01

Data collection and image processing for the generation of photographic products from SEASAT, LANDSAT, NIMBUS TIROS and METEOSAT 2 are described. The hardware facilities include a Linoscan 204 D composition device driven by a PRIME 200 computer, and a Plessey IDP 3000 interactive image display system. A disk based system enables the user to apply various processing algorithms to standard format data for display. Algorithms are described including: contrast enhancement by applying a mapping function to a set of pixel intensity values, a destriping algorithm which equates the means and variances of the radiance levels from each detector (LANDSAT), four principal components analysis, edge enhancement, and geometric transformations. Collaborative projects using remote sensing data by other government agencies are also mentioned. Author (ESA)

CONTINUATION OF POTENTIAL FIELD DATA TO A COMMON ALTITUDE

Jean-Louis LeMouel, Principal Investigator and Joel Ducruix
1 Apr. 1981 3 p refs Sponsored by NASA ERTS
(E82-10138; NASA-CR-168523; NAS 1.26:168523) Avail:
NTIS HC A02/MF A01 CSCL 05B

It is noted that the distorsions introduced by the variation of distance between the sources and the measurement points can be important enough to create fake anomalies. The average amplitude of the anomalies at MAGSAT altitude is of the order of a few nT. Thus it is necessary to be careful in reducing MAGSAT data to a common elevation. The achievement of the corresponding anomaly map is of primary importance for the study of regional and long wave length anomalies. A method for the continuation of potential fields is described which consists in representing any harmonic function (in particular the anomaly is function of space coordinates) as a sum of elementary harmonic functions; the continuation being achieved by an inverse technique. Tests, made on a synthetic set of data, evaluate the method.
M.G.

SEPARATION OF INTERNAL AND EXTERNAL FIELDS: A NEW TECHNIQUE OF DATA SCREENING Progress Report

Jean-Louis LeMouel, Principal Investigator, Michel Menvielle, and Joel Ducruix 1 Dec. 1980 5 p ref Sponsored by NASA ERTS
(E82-10139; NASA-CR-168524; NAS 1.26:168524) Avail:
NTIS HC A02/MF A01 CSCL 05B

A method for eliminating transient variation from MAGSAT data is described. Instead of using the conventional Kp index, the Km index is used for the rejection of nonquiet data. To build the Km index, the surface of the Earth is divided in eight sectors. Each sector is defined by two or three magnetic observatories and its geographic limits. For each three hourly interval the MAGSAT tracks were drawn on a map showing the location of the station (the crosses), the limits of the sector, and the value of the mean K index inside each sector. No figure in a sector means that the activity level in this sector is lower than 5 nt; in a sector covered with number 1, the activity lies between 5 and 20 nt; 2 stands for any level greater than 20 nT. M.G.

HCMM
(NASA Order S-75406B)
(E82-10154; NASA-CR-168539; NAS 1.26:168539; PR-4)
Avail: NTIS HC A02/MF A01 CSCL 05B

Plotted transects made from south Texas daytime HCMM data show the effect of subvisible cirrus (SCI) clouds in the emissive (IR) band but the effect is unnoticable in the reflective (VIS) band. The depression of satellite indicated temperatures ws greatest in the center of SCi streamers and tapered off at the edges. Pixels of uncontaminated land and water features in the HCMM test area shared identical VIS and IR digital count combinations with other pixels representing similar features. A minimum of 0.015 percent repeats of identical VIS-IR combinations are characteristic of land and water features in a scene of 30 percent cloud cover. This increases to 0.021 percent of more when the scene is clear. Pixels having shared VIS-IR combinations less than these amounts are considered to be cloud contaminated in the cluster screening method. About twenty percent of SCi was machine indistinguishable from land features in two dimensional spectral space (VIS vs IR). T.M.

FUTURE EARTHNET DISSEMINATION SYSTEMS (FEDS) STUDY. EXECUTIVE SUMMARY Final Report
M. Macintyre, P. Norris, and P. Scragg Paris ESA Dec. 1980 47 p
(Contract ESA-4241/80/F-FC(SC))
(Rept-3318; ESA-CR(P)-1438) Avail: NTIS HC A03/MF A01

The preparation of Earthnet for the dissemination to users of data from the European remote sensing program is considered. Worldwide plans for remote sensing satellite systems, European and north African user demand, data acquisition subsystems, data processing subsystems, data archiving subsystems and data communications subsystems are covered. Subsystems configurations that would meet these performance requirement are studied. Results are integrated to define overall systems configurations that would meet the performance requirements. Alternate centralized acquires data at four Earth stations and stores it temporarily on magnetic tape. Data are forwarded by satellite and disseminated to users by satellite and terrestrial links. Raw data are stored in a permanent playback archive, on optical disks, at the central site. Author (ESA)

INTERPRETATION OF REMOTELY SENSED IMAGE DATA AND IMPACT OF CLUSTER COMPRESSION
David J. Stanley Paris ESA Feb. 1981 154 p refs
(Contract ESA-3749/78/NL-HP)
(Rept-44.2866; ESA-CR(P)-1450) Avail: NTIS HC A08/MF A01

Image interpretation techniques are described and related to the needs of application areas. A survey of users and literature shows (1) little correlation between processing techniques and specific applications; (2) most users employ general purpose image analysis algorithms rather than developing special purpose techniques; (3) interpretation methodology frequently involves the use of several preprocessing, enhancement, and classification methods; (4) the majority of operational applications rely on manual photointerpretation, and (5) most digital image interpretation is done with general purpose software packages and/or special hard-wired image analysis systems. Operational users, (a minority), rely heavily on human photointerpretation, especially in geology, and at most use simple linear classifiers or enhancement techniques on interactive image processing systems. The impact of compression is limited because of academic and research user hostility, and decreasing cost of machine processing. Author (ESA)

ATLAS OF METEOSAT IMAGERY
C. A. Brimacombe (ESOC) May 1981 494 p refs In ENGLISH and FRENCH Original contains color illustrations
(ESA-SP-1030; ISSN-0379-6566) Avail: NTIS HC A21/MF A01; ESA, Paris FF 200 Member States, AU, CN, and NO (+20% others)

A selection of the images received from METEOSAT during its first two years of operation is presented. The METEOSAT system is described and characteristics of images as well as image processing are explained. Imagery is examined as to cloud classification, surface features, and mesoscale cloud formations. Synoptic scale cloud patterns, planetary scale cloud systems, and details of tropical cloud systems are also discussed. Miscellaneous aspects of satellite meteorology are included. Author (ESA)

INSTRUMENTATION AND SENSORS

Includes data acquisition and camera systems and remote sensors.

A82-21022 **Thermal viewing system for studying the earth's resources.** V. V. Perlov, D. N. Krasnikov, V. P. Sergeev, B. V. Ukhov, and G. I. Iasinskii. *(Optiko-Mekhanicheskaia Promyshlennost', vol. 48, Apr. 1981, p. 27-29.) Soviet Journal of Optical Technology*, vol. 48, Apr. 1981, p. 213-215. 5 refs. Translation.

The paper presents the Vulkan airborne thermal viewing system for remote studies of earth's resources, which operates simultaneously in two spectral bands of 3.8-5.2 microns. The construction and circuit features of the thermal viewer are examined, and further improvements for studying natural resources involving simultaneous radiometric measurements in several spectral channels are discussed.
D.L.G.

A82-21027 * **Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer.** I. J. Birrer, G. Berthold (University of Kansas Center for Research, Inc., Lawrence, KS), E. M. Bracalente (NASA, Langley Research Center, Hampton, VA), G. J. Dome (Bell Telephone Laboratories, Inc., Holmdel, NJ), and J. Sweet (Kentron Corp., Hampton, VA). *IEEE Transactions on Geoscience and Remote Sensing*, vol. GE-20, Jan. 1982, p. 11-17.

Scatterometer data from Seasat of the Amazon rain forest were examined to determine if the region is suitable to use as a reference for calibration of radars. The consistency of Skylab data viewing the Amazon region prompted the analyses, and the Seasat-A scatterometer system (SASS) gathered data of the same region at varying angles. The instrument employed a 100 W 14.6 GHz signal with the reflected power sampled 61 times during each 1.89 sec measurement period. Doppler filters were used in 15 parallel channels of reception, and represented areas 20 km by 50-70 km. Tests were made of regional and temporal stability of the Amazon area, with five measurement angles averaged at different incidence angles to find the mean deviation, which was found to be less than 0.5 dB. Diurnal effects were confined to early morning, and further tests are recommended to obtain results for an entire year, to develop screening methods for thick clouds and rain, and to determine the deviation more precisely.
M.S.K.

A82-21034 **Theoretical and experimental studies of microwave emission signatures of snow.** M. E. Tiuri (Helsinki University of Technology, Esbo, Finland). *IEEE Transactions on Geoscience and Remote Sensing*, vol. GE-20, Jan. 1982, p. 51-57. 11 refs.

Theoretical and experimental studies of the brightness temperature of snow are reported. A snow model was devised, with the dielectric constant for snow determined from the dielectric properties of ice and water. The equivalent scattering particle dielectric constant was calculated from the dielectric constant of snow, and the theory was expanded to consider different homogeneous layers. Radiometric readings at 4.8, 11.6, and 36.8 GHz were taken from a seven meter high tower in a snow field. The brightness temperature decreased rapidly with increasing frequencies, and the brightness temperature of snow covered land was found to be higher in cold weather than that of bare land.
M.S.K.

A82-21035 **Towards the definition of optimum sensor specifications for microwave remote sensing of snow.** C. Mätzler, E. Schanda (Bern, Universität, Berne, Switzerland), and W. Good (Eidgenössisches Institut für Schnee- und Lawinenforschung, Davos, Switzerland). *IEEE Transactions on Geoscience and Remote Sensing*, vol. GE-20, Jan. 1982, p. 57-66. 20 refs.

The inconsistencies in the relationships between microwave data and the water equivalent of the snowcover, and the disappearance of the contrast between snow and snow-free regions when the snow is wet were studied. A relationship between the water equivalent of a dry snow layer and the brightness temperature is discussed in terms of a complete set of snow radiometry data at 4.9, 10.4, 21, and 36 GHz. The combined effects of volume scattering on large crystals is shown to be a function of the water equivalent, which is determined from knowledge of the state of metamorphism. A strong decrease of the reflected wavelengths was found to be due to snow wetness, especially at higher frequencies. Multivariate data analysis was employed to analyze the data set to find the respective discriminant powers in splitting the ground-truth data-points of the changing snow cover.
M.S.K.

A82-21082 **Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system.** Y. Ogawa (National Institute for Environmental Studies, Yatabe, Ibaraki, Japan) and T. Ohara (Hokkaido University, Sapporo, Japan). *Boundary-Layer Meteorology*, vol. 22, Jan. 1982, p. 123-131.

The development of a small, lightweight ultrasonic kytoon-mounted anemometer system for transmitting windspeed, momentum, and heat flux data to the ground in digital form by means of optical fibers is reported. The 70 cu m kytoon can lift 20-30 kg, and the weight of the instruments is 10 kg, with an optic fiber 1500 m long capable of carrying one megabyte/sec at 18 cycles/sec on 16 channels. Numerical filters are used to eliminate artificial velocities induced by swinging motion of the sensors, with calibration achieved in wind tunnel studies. Experimental data were gathered at heights of 50, 100, 200, 300, 400, 500, and 700 m, and the standard deviations for the u, v, and w components were found to stabilize at 400 m, and increase with decreasing height below that level. The kytoon-mounted system is suitable for operation in winds below 10 m/sec.
M.S.K.

A82-21090 **Image quality control in the Meteosat ground processing system.** M. Jones and N. C. Colombeski (ESA, European Space Research Operations Centre, Darmstadt, West Germany). *International Journal of Remote Sensing*, vol. 2, Oct.-Dec. 1981, p. 331-349. 11 refs.

The approach taken to image quality control in the European Space Agency's Meteosat project is discussed. User requirements, to both instrumental and physical accuracy, on the quality of the meteorological end-products and on the image quality are presented, and the effect of a deterioration in image quality on budget errors is discussed. Methods for evaluating image quality are described, and the implementation of these methods within the Meteosat Ground Computer System is reviewed. It is concluded, that the proper hardware and software must be provided to monitor the quality indicators and to allow for an adequate level of manning. This includes interactive displays permitting near real-time display of image data and key parameters, and facilities for a longer-term view of the evolution of the quality parameters. Image quality control should also be closely coupled with mission control. The radiometric and geometric quality from the F1-model of Meteosat is described as an example.
J.F.

A82-21091 **Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data.** J. Otterman (U.S. Geological Survey, Reston, VA; Tel Aviv University, Tel Aviv, Israel) and C. J. Robinove (U.S. Geological Survey, Reston, VA). *International Journal of Remote Sensing*, vol. 2, Oct.-Dec. 1981, p. 351-360.

The atmospheric effects of radiometric data recorded in the Landsat multispectral scanner system bands are compiled for cases of representative and ideal atmospheric conditions. These effects are expressed as a difference between the actual spectral reflectivity measured close to the ground and the surface-atmosphere system reflectivity to zenith, derived from satellite data. The resulting formula includes two optical thickness parameters for backscattering and absorption as well as a function for the anisotropy of backscattering from the direct beam to the zenith. The expression is accurate only for an atmosphere of low optical thickness and large areas of uniform reflectivity. It is concluded that in the quantitative monitoring of surface changes from satellites, scattering effects will predominate in some cases (mapping coastal waters), while absorption effects will predominate in others (desert fringe regions). The measurements used for monitoring scattering effects are also shown to differ from those for monitoring absorption effects.
J.F.

A82-21399 **Analysis of the direction-dependent radiation behavior in multispectral scanning data (Untersuchung des richtungs-**

abhängigen Strahlungsverhaltens in multispektralen Abtastdaten). B. Pfeiffer (Karlsruhe, Universität, Karlsruhe, West Germany). *Bildmessung und Luftbildwesen,* vol. 50, Jan. 1, 1982, p. 35-47. 7 refs. In German.

The direction-dependent radiation behavior of several natural objects is analyzed, based on multispectral scanning data from a number of different flight altitudes. Results show a significant change in brightness with view angle and wavelength, and a comparison with atmospheric model calculations shows that the increase in directional behavior is caused more by the object itself than by the atmosphere. The position of the sun seemed to have a greater effect in changing the object-reflected signal than did height. The direction-dependence could not be corrected for all classes of objects and wavelengths due to variations in brightness as well as object-dependent color shifts. The application of a modified classification procedure by use of a direction dependent statistic greatly improved the results. J.F.

A82-21434 **Recent auroral measurements using a field-widened interferometer spectrometer.** A. J. Steed, D. J. Baker, B. Y. Bartschi (Utah State University of Agriculture and Applied Science, Logan, UT), and A. T. Stair, Jr. (USAF, Geophysics Laboratory, Bedford, MA). In: International Conference on Fourier Transform Infrared Spectroscopy, Columbia, SC, June 8-12, 1981, Proceedings. Bellingham, WA, Society of Photo-Optical Instrumentation Engineers, 1981, p. 202-205. 9 refs. USAF-sponsored research.

Questions regarding the evolution of field-widened interferometer (FWI) instruments are briefly considered. The first FWI instrument was designed for visible and near IR applications. In response to the need for a faster drive system for auroral work, a second generation instrument using a gas-lubricated bearing was developed in 1973. A description is presented of the field operating configuration of the second generation system, taking into account also recent auroral results. A third generation rocket-borne version of this instrument has been developed by Haycock et al. (1979). A presented graph shows one 40 second spectral scan of an auroral arc taken with the second generation FWI instrument in Andoya, Norway, on November 11, 1980. The instrument was pointed at the zenith, and a separate dual channel radiometer was co-aligned with the interferometer to provide long-term OH and O2 emission levels. G.R.

A82-22140 **Accuracy of the normal case of close-range photogrammetry.** Y. I. Abdel-Aziz (University of Petroleum and Minerals, Dhahran, Saudi Arabia). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 207-213. 5 refs.

The photogrammetric technique is used for the three-dimensional recording of historical monuments. In connection with the recording operation, certain problems have to be solved concerning the establishment of the optimum location of the camera relative to the monument. So far, there have been no satisfactory formulas for the determination of the optimum positions of the two camera stations. The main objective of the considered investigation is related to the development of formulas which will make it possible to determine the object accuracy, for any camera setup, right in the field. The new formulas developed express the accuracy of the ground points as a function of the four parameters of external orientation. A description is provided of mathematical and experimental proofs regarding the correctness of the new formulas. G.R.

A82-22141 **Calibration and model reconstruction in analytical close-range stereophotogrammetry. II - Special evaluation procedures for rasterstereography and moiré topography.** W. Frobin and E. Hierholzer (Orthopädische Universitätsklinik, Münster, West Germany). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 215-220. 8 refs. Research supported by the Deutsche Forschungsgemeinschaft.

It is pointed out that, in the case of rasterstereography and moiré topography, special provisions have to be made when standard photogrammetric procedures are employed. Rasterstereography is a modification of conventional stereophotography, in which one of the two cameras has been replaced by a projector with a regular (cross) raster diapositive. The raster lines are projected onto the surface to be measured and are photographed by the camera. The calibration of a rasterstereographic apparatus is discussed. In cross rasterstereography, there is an overdeterminancy regarding the reconstruction of the surface point. Either vertical or horizontal raster lines may be omitted. Special procedures employed in line rasterstereography are considered. Problems related to the use of moiré topography are also investigated, taking into account the projection method and the shadow method. G.R.

A82-22148 **Satellite photos can aid navigation on aerial photo missions.** R. J. Myhre (U.S. Forest Service, Fort Collins, CO). *Photogrammetric Engineering and Remote Sensing,* vol. 48, Feb. 1982, p. 275-279.

Accurate navigation is important to the success of aerial photo missions. The accuracy of the navigation on these missions depends on the amount of useful information available on the flight maps or photos. If satisfactory maps or aerial photos are not available, current satellite imagery (Landsat photos) can be enlarged for use as navigational aids. This technique has been tested and proven successful on operational aerial photography missions. Aspects of photo mission planning are considered, taking into account aerial photo coverage and satellite photo coverage. Attention is also given to questions regarding Landsat imagery and the two methods employed to enlarge the Landsat image to the desired scale. It is found to be important to select a satellite image which represents the time frame of the anticipated aerial photo mission. G.R.

A82-22397 † **Spaceborne photography for the study of earth resources (Kosmicheskaia fotos'emka dlia izucheniia prirodnykh resursov).** G. B. Bonin. Leningrad, Izdatel'stvo Nedra, 1980. 320 p. 564 refs. In Russian.

Various theoretical and practical aspects of spaceborne photography in the study of earth resources are reviewed, including problems of photogrammetric image processing. Particular consideration is given to the attitude control and stabilization of remote-sensing satellites; the effect of the atmosphere on the quality and photometric properties of the photographs; subsatellite experiments; and external-orientation elements of space imagery. Photogrammetric measurements on the basis of single images, the transformation of images, and elements of scanner photogrammetry are also discussed. B.J.

A82-22877 * **Microwave remote sensing: Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry.** F. T. Ulaby, R. K. Moore, and A. K. Fung (Kansas, University, Lawrence, KS). Research supported by NASA, NSF, and DOD. Reading, MA, Addison-Wesley Publishing Co. (Remote Sensing, No. 2), 1981. 470 p. 267 refs. $46.50.

The three components of microwave remote sensing (sensor-scene interaction, sensor design, and measurement techniques), and the applications to geoscience are examined. The history of active and passive microwave sensing is reviewed, along with fundamental principles of electromagnetic wave propagation, antennas, and microwave interaction with atmospheric constituents. Radiometric concepts are reviewed, particularly for measurement problems for atmospheric and terrestrial sources of natural radiation. Particular attention is given to the emission by atmospheric gases, clouds, and rain as described by the radiative transfer function. Finally, the operation and performance characteristics of radiometer receivers are discussed, particularly for measurement precision, calibration techniques, and imaging considerations. M.S.K.

A82-23045 * **Superconducting tensor gravity gradiometer.** H. J. Paik (Maryland, University, College Park, MD). *(International Symposium on Inertial Technology for Surveying and Geodesy, 2nd, Banff, Alberta, Canada, June 1-5, 1981.) Bulletin Géodésique,* vol. 55, no. 4, 1981, p. 370-381. 12 refs. Contract No. NAS8-33822.

The employment of superconductivity and other material properties at cryogenic temperatures to fabricate sensitive, low-drift, gravity gradiometer is described. The device yields a reduction of noise of four orders of magnitude over room temperature gradiometers, and direct summation and subtraction of signals from accelerometers in varying orientations are possible with superconducting circuitry. Additional circuits permit determination of the linear and angular acceleration vectors independent of the measurement of the gravity gradient tensor. A dewar flask capable of maintaining helium in a liquid state for a year's duration is under development by NASA, and a superconducting tensor gravity gradiometer for the NASA Geodynamics Program is intended for a LEO polar trajectory to measure the harmonic expansion coefficients of the earth's gravity field up to order 300. M.S.K.

A82-24964 **Thermal infrared data from the Heat Capacity Mapping Mission.** *Remote Sensing of Environment,* vol. 11, Mar. 1981, p. 77-79.

The Heat Capacity Mapping Mission (HCMM) satellite, launched on April 26, 1978, was designed to experimentally evaluate the usefulness of remotely sensed surface temperature measurements for applications in geology, botany, ecology, hydrology and meteorology. The orbital characteristics of the satellite permit repetitive observations of midlatitude regions over the course of the diurnal heating cycle. This type of coverage is optimal for observing the temporal and spatial thermal contrasts within surface materials. HCMM thermal IR measurements can also be used to estimate the apparent thermal inertia of surface cover materials. A nighttime thermal IR image of Utah is examined. O.C.

A82-25460 **Satellite photograph interpretation.** C. Peebles. *Spaceflight,* vol. 24, Apr. 1982, p. 161-163. 10 refs.

The instrumentation and interpretation of satellite earth surface reconnaissance data are outlined. IR scanners, multispectral photo systems, and digitally returned optical sensor information are soon to be augmented by imaging radar and continuation of the use of the Big Bird satellites for high resolution photographic imaging. The photographs are sometimes scanned visually by using a 60% overlap to provide a stereo view and gain depth information on the observed scene. Human photointerpreters are mentioned as having an encyclopedic knowledge of particular areas of scanning, enabling immediate detection and educated guessing at the function of any change in a repeatedly monitored scene. Comparative covers is a process of historically referencing updated photos to determine increases or decreases in use of areas, or precise visual steps of weapons assembly. M.S.K.

A82-26000 # **Ideal phase in estimating the spatial gradient of magnetic daily variations recorded by magnetometer arrays.** F. E. M. Lilley and M. N. Sloane (Australian National University, Canberra, Australia). *Journal of Geomagnetism and Geoelectricity,* vol. 33, no. 9, 1981, p. 517-525. 14 refs.

A82-26049 **Evaluation of serial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data (Auswertung von Reihenmesskammer- und Flugzeugabtasteraufnahmen aus Wattgebieten - Digitale Korrelation und Klassifizierung multitemporaler Bilddaten).** E. Dennert-Möller and M. Ehlers (Hannover, Universität, Hanover, West Germany). *Bildmessung und Luftbildwesen,* vol. 50, Mar. 1, 1982, p. 59-67. 14 refs. In German.

It has been found that large-scale aerial photographs are particularly suited for the study of the special conditions of the tidal lands at the German coast of the North Sea. Procedures of digital correlation make it possible to establish, for a comparison, relations between imagery obtained with various sensors at different scales and at different times. In the present investigation, photographs obtained with serial photogrammetric cameras, and aircraft scanner imagery are, after image correction, classified on an individual basis, and are compared with each other. A multitemporal picture is finally obtained and classified. The required digital processing operations are performed by making use of interactive image processing equipment and a Cyber 76-14 computer. G.R.

A82-26963 **Radiometric calibration of the Coastal Zone Color Scanner on Nimbus 7 - A proposed adjustment.** M. Viollier (Lille I, Université, Villeneuve d'Ascq, Nord, France). *Applied Optics,* vol. 21, Mar. 15, 1982, p. 1142-1145. 12 refs. Research supported by the Centre National d'Etudes Spatiales and Ministère de l'Environnement et du Cadre de Vie.

In conjunction with atmospheric effect computations, ground measurements of water reflectances for two very clear days are compared with Coastal Zone Color Scanner satellite data to point out scanner calibration errors. A new set of calibration constants is proposed which standardizes radiances relative to the extraterrestrial solar irradiance. It is emphasized that the suggested modification is theoretically valid only for the June and July, 1979 period of study alone, and for the corresponding electronic gain. It is expected that similar calibration error trends exist for the other gains and periods. O.C.

A82-27576 * **International Symposium on Remote Sensing of Environment, 15th, University of Michigan, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volumes 1, 2 & 3.** Symposium sponsored by the Environmental Research Institute of Michigan, NOAA, NASA, et al. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981. Vol. 1, 570 p.; vol. 2, 568 p.; vol. 3, 493 p. Price of three volumes, $88.

Developments related to advanced sensors and sensor systems are being examined, taking into account advanced aerospace remote sensing systems for global resource applications, spaceborne radar observation of the earth surface, a concept for an advanced earth resources satellite system, technologies for the multispectral mapping of earth resources, and the use of Landsat images and morphologic analogs in space exploration. Other topics discussed are related to modeling for terrain analysis, digital processing and analysis of remotely sensed data, microwave remote sensing, new discoveries from planetary remote sensing, and data base utilization. Advances in the area of luminescence are also considered along with future plans and prospects concerning the remote sensing of the earth from space. G.R.

A82-27577 * # **Advanced aerospace remote sensing systems for global resource applications.** J. V. Taranik (NASA, Office of Space and Terrestrial Applications, Washington, DC). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 3-20. 8 refs.

The Landsat program, which was concerned with testing the use of satellite data for global resource observations, has been an unqualified success, and users of Landsat data demand now that repetitive global multispectral data be provided on a routine basis for a wide variety of applications. A review is provided of the current status of NASA's land observation program, new developments in advanced aerospace remote sensing techniques, and issues related to the development and testing of new prototype systems by the U.S. The current Landsat program is considered along with developments in solid-state imaging technology, short wave infrared research using the Space Shuttle, the Shuttle Orbiter camera payload system large format camera, and advanced research in thermal remote sensing. Attention is also given to the potential of imaging radar for global resource observations, and research related to geopotential field mapping. G.R.

A82-27578 * # **Spaceborne radar observation of the earth surface.** C. Elachi (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 21-31. 9 refs. Contract No. NAS7-100.

Seasat SAR images are being analyzed to determine the potential of spaceborne radars for earth resources and ocean surface observation. Examples are presented for a variety of applications in structural mapping, lithological classification, soil moisture detection, polar ice motion monitoring and ocean features observation. These examples are briefly discussed with emphasis on the future research needed to further the capability of radar sensors, by themselves or in combination with other sensors. A brief discussion is then given on the spaceborne sensors which are required and planned to meet these needs. (Author)

A82-27579 # **A concept for an advanced earth resources satellite system.** G. T. Keene (Eastman Kodak Co., Rochester, NY). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 33-44. 5 refs.

Attention is given to a study concerned with the definition of a concept for an advanced sensor system to follow the Landsat D series. In this project NASA sought maximum operational reliability and minimum development risk by use of proven mechanisms and available technology, taking into account an employment of visible (VIS), shortwave infrared (SWIR), and thermal infrared (TIR) spectral bands. The TIR section was to be an optional modular unit, and all focal planes would utilize the inherent registration of solid state linear arrays with no moving parts while imaging, and passive thermal control. Attention is given to optics, detectors, thermal control, performance estimates, and recent modifications. G.R.

A82-27580 * # **Technologies for the multispectral mapping of earth resources.** J. B. Wellman (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 45-64. 16 refs. Contract No. NAS7-100.

The application of solid-state detector array imaging to the remote sensing of the earth as a follow-on to currently planned Landsat missions provides the opportunity to achieve significantly increased performance. First-order advantages to be anticipated are higher sensitivity resulting in greater radiometric accuracies and improved geometric fidelity. The Multispectral Mapper design concept is responsive to a broad range of user needs by incorporating in-flight selection of spectral bands, instantaneous fields of view, and swath width. This versatility is achieved by the use of an imaging spectrometer which permits both spatial and spectral sampling in the image plane using area array detectors. Other improvements over the current Landsat multispectral scanner and Thematic Mapper include higher spatial resolution and inherently precise registration of the spectral bands. The key technologies required in order to realize these improvements include short-wavelength infrared detectors, wide field of view, broad spectral coverage optics, focal plane cooling, and high-speed onboard signal processing. Significant development activities will be required if an advanced remote sensing capability is to be implemented. (Author)

In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 65-72. 10 refs.

The acceptance and use of Landsat products clearly indicates that there is a need for a truly operational earth-sensing system. In December 1980 NASA issued a request for proposal of an MLA (multispectral linear array) Instrument Definition Study. The MLA study calls for two 'short-wave' infrared bands (1.55 to 1.75 micrometers and 2.08 to 2.35 micrometers). However, in connection with cost and complexity problems, it appears unlikely that these bands will be utilized on any operational system during the 1980's. The characteristics of available systems for imaging the earth are discussed. Attention is given to Mapsat which is the result of an effort to define an operational earth-sensing system. Mapsat is based on Landsat technology and will provide global coverage on a continuous basis. Aspects of mapping geometry are considered along with questions of resolution and data transmission, spectral bands, stereoscopic capability, and one-dimensional data processing. G.R.

A82-27583 * # **Information expectations from Landsat-D.** V. V. Salomonson, D. L. Williams, and J. L. Barker (NASA, Goddard Space Flight Center, Applications Directorate, Greenbelt, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 81-93. 5 refs.

The first satellite of the Landsat-D Project is to be launched in the third quarter of 1982 with a second satellite to be prepared for launch 12 to 15 months later. Both spacecraft are to include the familiar Multispectral Scanner (MSS) and the advanced multispectral scanner called the Thematic Mapper (TM). The ground data processing system for the MSS data is to be ready to produce 200 scenes a day in 1982. The data processing systems for the TM are to be fully operational at the 50 to 100 scenes a day level in early 1985. The fabrication of the system components has proceeded well in recent months, and integration of the total system is under way. The procedures for processing the data and meeting specifications are nearly completed for the MSS and are outlined in detail for the TM. An outline of an investigation program stressing systems performance has been developed for the period 1982 to 1985. (Author)

A82-27589 # **Overview of digital processing of SAR data.** J. P. Guignard (ESA, Data Handling and Signal Processing Div., Noordwijk, Netherlands). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 179-194. 18 refs.

It is pointed out that before the launch of the Seasat-A spacecraft, the processing of synthetic aperture radar (SAR) data was mainly performed using optical correlators. Seasat offered the first opportunity to develop digital SAR processors. An overview is provided of the Seasat-A SAR digital processors, taking into account the MDA configuration, Communication Research Center processing, the RAE processor, the DFVLR-GSOC processor, the JPL processor, the Bendix SAR processor, the CCRS processors, the Mitsubishi Seasat processor, the Norway Defense Research Establishment processor, and the Nippon Electric Company processor. Attention is also given to algorithms, image quality experiments, and a number of new developments. G.R.

A82-27591 # **The logit classifier - A general maximum likelihood discriminant for remote sensing applications.** P. F. Maynard and A. H. Strahler (California, University, Santa Barbara, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 213-222. 17 refs.

The most commonly used discriminant function in remote sensing applications is the Bayes maximum likelihood classifier (Bayes MLC). However, in an evaluation study it is found that Bayes MLC with parametric estimation of the probability density functions is not an optimal classifier for many remote sensing applications. It is pointed out that there are several statistically acceptable techniques for classifying nominal data such as the probit, logit, and arctan. However, the logit model has computational advantages since it is a closed (explicit) functional form with convenient curvature properties for numerical optimization. An investigation shows that the logit classifier is both theoretically and experimentally superior to the Bayes MLC with the simulated data and the Landsat Multispectral Scanner System (MSS) data employed in the study. G.R.

A82-27594 * # **Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate.** F. Li, D. Held, B. Huneycutt, and H. Zebker (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 259-270. 18 refs. Contract No. NAS7-100.

A computer simulation program that is used to study the effects of digitization in spaceborne synthetic aperture radar systems is described. An analytical study of the distortion noise introduced by the digitization process at various gain settings, sampling rates and bit error rates is presented and the results agree well with those obtained from the simulation program. The simulation program is also used to study the spatial frequency response of hard-limiting (quantizing to 1-bit) synthetic aperture radar systems. The implications of these results on synthetic aperture radar system design are discussed. (Author)

A82-27595 # **Features of a generalized digital Synthetic Aperture Radar processor.** J. R. Bennett, I. G. Cumming, P. R. McConnell, and L. Gutteridge (MacDonald, Dettwiler and Associates, Ltd., Richmond, British Columbia, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 271-290.

A summary of the planned or proposed international Synthetic

Aperture Radar (SAR) activity for the next decade is provided in a table. A large number of primarily Shuttle-based experimental missions carrying SARs are being considered. In terms of SAR processing requirements, this activity translates into a need for modest throughput, highly flexible processors. The required processors will have to be adaptable to SARs of different pulse coding schemes, frequency, antenna length (beam width), swath width, depression angle, altitude, squint angle, polarization, and data rates. Experimental flexibility will be required to process the data from a given SAR configuration in a variety of different ways, taking into account resolution, multilooks, and multisubapertures. A description is presented of a digital processor designed to service the needs of this projected SAR activity. G.R.

A82-27606 # **The Japanese MOS and Los program.** Y. Ishizawa (National Space Development Agency of Japan, Tokyo, Japan). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 1. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 433-443.

The status of the Japanese Earth Observation Satellite Program and sensor development program is reviewd, with emphasis on the Marine Observation Satellite-1 (MOS-1) to be launched in 1985. Mission objectives of the MOS-1 program are outlined, and the satellite and radiometers are described. Three sensors to be mounted on the satellite are presented, which are to observe visible, near visible, near infrared, infrared, and microwave regions. The MOS-1 is a three-axis stabilized satellite with a cubic body on which the three sensors and bus equipment are mounted. The overall height, including antennas, is about 300 cm, with a length and width of about 146 and 126 cm, respectively. D.L.G.

A82-27628 # **Implementation of the Space Oblique Mercator projection in a production environment.** J. Brooks, R. Kumar, and I. Levine (General Electric Co., Space Div., Lanham, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 671-679. 5 refs.

The Space Oblique Mercator (SOM) projection, first considered by Colvocoresses (1974) is the first known map projection to provide continuous conformal mapping of satellite imagery true to scale along ground track, and accurate to within a few parts in a million. Although SOM was specifically designed for Landsat Imagery, it is also suitable for other near polar satellites. Snyder (1978) obtained a full mathematical derivation of the projection and developed a computer program for it (Snyder's Code). The present investigation has the objective to show that it is possible to incorporate the Snyder code output into Landsat-D Multispectral Scanner System (MSS) processing by means of mostly offline calculations. G.R.

A82-27633 # **Spectritek - A multispectral electron-optic pushbroom camera.** R. F. Lucy (Itek Corp., Optical Systems Div., Lexington, MA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 715-720.

Spectritek is an electro-optic aircraft camera concept designed to provide multispectral imagery for earth resources exploration. The silicon CCD focal plane arrays provide registered imagery in three Landsat color bands. The camera sensitivity meets Landsat-MLA requirements. The data collected is recorded on magnetic tape. After ground processing and calibration the data is stored in a low-cost storage medium for use by earth resources investigators. The camera system provides the wide area coverage of a satellite sensor and the high resolution of an aircraft sensor. Spectritek complements a companion large format stereo film camera (Metritek). Another advantage of the aircraft approach is its ability to update data files rapidly and economically. (Author)

A82-27638 # **Locating prehistoric archaeological sites using Landsat.** I. Wells, J. Custer, and V. Klemas (Delaware, University, Newark, DE). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 771-780. 29 refs. Research supported by the Bureau of Archaeology and Historic Preservation of the State of Delaware.

It has been suggested that computer statistical techniques using Landsat digital imagery classifications can be applied over large areas and a large number of sites to locate areas that have a high probability of containing prehistoric sites. To test this hypothesis, an experiment has been performed on a selected area along the Appoquinimink River in New Castle County, Delaware. The results of the experiment suggest that Landsat data combined possibly with digital terrain data can provide the necessary consistent synoptic analysis of the landscape. B.J.

A82-27642 # **Passive bathymetric measurements in the Bruce Peninsula region of Ontario.** W. C. Weidmark, S. C. Jain (Moniteq, Ltd., Concord, Ontario, Canada), H. H. Zwick (Canada Centre for Remote Sensing, Ottawa, Canada), and J. R. Miller (York University, Downsview, Ontario, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 811-822. 12 refs. Research supported by the Canada Centre for Remote Sensing; Department of Supply and Services Contract No. OSQ-80-00097.

Airborne MSS measurements in the 400-1000 nm wavelength range were performed in the summer of 1980 over the Bruce Peninsula in order to evaluate techniques of computing water depth from MSS imagery. The spectral volume reflectance maps were processed using radiative transfer models to interpret the image in terms of water depth. Theoretical modelling shows that the modification of Hulbert's formulation of the two-flow model to include asymmetric attenuation of upwelling and downwelling radiation results in reflectance values which express accurately the exact Monte Carlo calculations. A value of asymmetry factor can be chosen for any scattering albedo and backscatter probability to ensure a good fit of the two-flow model results to the Monte Carlo calculations. B.J.

A82-27648 # **Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping.** J. W. Merchant (Kansas, University, Lawrence, KS). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 905-914. 32 refs.

Graphic displays of classified Landsat MSS data commonly exhibit substantial variations in the degree to which pixels of various cover types are fragmented, aggregated and interspersed within a scene. The nature of the spatial distribution of classified pixels, or 'spatial complexity', in a scene is discussed. The components of cover frequency, cover diversity and cover composition are defined and are employed to measure spatial complexity. Regions of similar spatial complexity are delimited in a Kansas test site and are found to be associated with independently defined multi-factoral landscape regions. Such multi-factoral regions are characterized by integrated complexes of physical and cultural phenomena. Potential applications of research results are considered. (Author)

A82-27649 # **Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application.** N. L. Faust, L. E. Jordon, III, and M. D. Furman (ERDAS, Inc., Atlanta, GA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 915-917.

This paper addresses some of the issues involved in the design and operational use of a low-cost image processing system based on recent advances in micro-computer technology. Also discussed are the integration on the micro system of Landsat image processing and GIS capabilities, with an overview of existing software capabilities such as false color display, training field selection, geometric correction, and both supervised and unsupervised (cluster) classification. Considerations for the use of the system by 'non-computer types' provide the basis for a menu-selection approach using simple keywords. Future directions in the development of the micro system are also mentioned. (Author)

08 INSTRUMENTATION AND SENSORS

A82-27652 # **Instrumentation for remote reflectance and radiance measurements.** L. Daubner, J. Davies, R. Dick, and S. M. Till (Barringer Research, Ltd., Toronto, Canada). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 939-948. 12 refs.

Reflectance spectroscopy has led to the development of a family of instruments capable of remote sensing applications. The various features in the reflectance spectra of soils, rocks, and other materials are dependent upon their constituent minerals. Attention is given to the Field Reflectance Spectrometer (REFSPEC), which is a self-contained dual beam scanning reflectance spectrometer. The optical train looks alternately at the target of choice and then at the solar radiation. REFSPEC comprises the optical head a battery pack, a standard reflectance target package, and a digital data logger. An analog output is also provided. Another instrument considered is the Hand Held Ratioing Radiometer (HHRR). This instrument measures the energy reflected by a target scene of interest. Applications for both instruments are related to general studies, agriculture, geobotany, geochemistry, geology, and oceanography. G.R.

A82-27653 # **Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor.** A. W. Kimball (Westinghouse Electric Corp., Baltimore, MD). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 949-958. USAF-supported research.

A report on the orbital performance of a line array infrared (1.57 + or - 0.6 micron) sensor flown on DMSP satellite F4 in 1979 is given. Instrument characteristics are discussed briefly. Numerical data reduction and normalization methods are described. Samples of orbital data, normalized and compared to data in DMSP visible and thermal infrared channels, are presented. It is concluded that the instrument design performance was essentially as expected and that cloud/snow contrast ratios predicted to lie in the range of three to six were realized in analysis of daylight data over the Northern Hemisphere in December 1979. (Author)

A82-27659 # **University of Dundee satellite image data acquisition and archiving facility.** P. E. Baylis (Dundee, University, Dundee, Scotland). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 2. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1017-1024. 10 refs.

The capabilities, operations and equipment of the facility for the reception and archiving of satellite image data maintained by the University of Dundee are presented. The Dundee station receives, records and stores data from the Very High Resolution Radiometer (VHRR) of the ITOS/NOAA satellites, the Advanced Very High Resolution Radiometer (AVHRR) of the Tiros-N/NOAA satellites, the Coastal Zone Color Scanner (CZCS) of the Nimbus 7 satellite, and the Visible and Infra-red Spin Scan Radiometer of the Meteosat satellite. Products available from the archive include hard copy and browse files of VHRR/AVHRR and CZCS images, and computer compatible tapes of AVHRR and CZCS scenes. Station equipment used to carry out the functions of the Dundee station consists of a spun aluminum antenna with computer-driven drive motors for satellite tracking purposes, connected with two front ends, telemetry receivers, a bit conditioner, frame synchronizer, and decommutator, and also includes a video processor and tape transports. A.L.W.

A82-27675 # **The use of wave contrast measurements in the evaluation of SAR/gravity models.** E. S. Kasischke and R. A. Shuchman (Michigan, Environmental Research Institute, Ann Arbor, MI). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1187-1209. 36 refs. Contract No. N00014-76-C-1048.

A new method to measure the detectability of gravity waves imaged by a synthetic aperture radar (SAR) has been developed. This new method is called a peak-to-background ratio (PBR). The PBR was used in studying two different SAR data sets. X- and L-band aircraft SAR data collected over a Lake Michigan test site were used to study the effects of changing SAR processing parameters (telerotation adjustments and integration time) on wave visibility. A second data set was collected by the Seasat L-band SAR over the JASIN test array and was used to correlate PBRs to various wind and wave parameters. Results of this study indicate the peak-to-background ratio is an effective means to correlate SAR/oceanography theory with actual SAR data sets. (Author)

A82-27681 # **A low cost NOAA/TIROS AVHRR receiving station.** W. Carroll (Western Australia Institute of Technology, South Bentley, Australia), R. D. Cargill, and F. R. Honey (Commonwealth Scientific and Industrial Research Organization, Div. of Land Resources Management, Wembley, Australia). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3.
Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1253-1264. 12 refs.

In August 1980, a project was initiated with the objective to build in Australia a facility for real-time reception, processing, and dissemination of data from the Advanced Very High Resolution Radiometer (AVHRR) on the NOAA satellites. Using existing equipment and developing some special purpose hardware and software, the facility cost approximately $5000, excluding labor costs. This facility will provide data for experiments on correlation of sea surface temperatures with fish catches around Australia, for cloud seeding experiments, and for regional geologic, soil moisture, and land system mapping. G.R.

A82-27683 # **Spatial resolution and geometric potential of planned earth satellite missions.** R. Welch (Georgia, University, Athens, GA). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1275-1283. 14 refs.

Evidence to-date indicates that spatial resolutions of satellite sensor systems equivalent to 5 to 10 m IFOV will be required for the compilation of topographic maps at scales larger than 1:250,000, or for the preparation of land use maps depicting Level II and III classes of information. Film and line array cameras planned for use on satellite missions in the 1980's will provide image data meeting accepted accuracy standards for planimetric maps of 1:25,000 to 1:100,000 scale. Contour intervals of approximately 50 to 100 m appear feasible. Contour intervals of this magnitude are normally associated with topographic maps of 1:250,000 scale. (Author)

A82-27706 # **Geometric correction of airborne multispectral scanner images.** M. Kindelan (IBM Scientific Centre, Madrid, Spain), V. Moreno (Instituto Nacional de Técnica Aerospacial, Madrid, Spain), and A. Valverde (Escuela Técnica Superior de Ingenieros de Minas, Madrid, Spain). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1539-1549. 17 refs.

The aim of this paper, is to compare different methods to correct the geometric distortions which are present in Multispectral Scanner Images, and to propose a method based on the orientation parameters which are recorded in flight in the same tape as the image data. This method has the advantage that it may be completed automatically, while their results are comparable or better than those of other methods. (Author)

A82-28127 † **Investigation of earth resources using rocket and space technology (Issledovanie zemnykh resursov pri pomoshchi raketno-kosmicheskoi tekhniki).** V. P. Mishin. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka*, no. 1, 1982, p. 9-11. In Russian.

Various applications of the remote sensing of earth resources are described, and the basic characteristics of the investigation of resources of land and sea from space are discussed. The features of a long-term remote sensing program are examined. B.J.

A82-28128 † **Structure of hardware and software at a regional center for the automated processing of aerial and space**

remote-sensing images (Struktura tekhnicheskikh i programmnykh sredstv regional'nogo tsentra avtomatizirovannoi obrabotki aerokosmicheskikh izobrazhenii). A. S. Alekseev, V. N. Dement'ev, B. K. Kozhevnikov, N. V. Kul'kov, V. P. Piatkin, R. M. Salavatov, and S. L. Shevelev. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 12-21. 8 refs. In Russian.

The paper describes a multiprocessor system for the processing of multispectral remote-sensing images, which features interactive thematic processing. Hardware and software structures for the system are described, and particular attention is given to the development of problem-oriented languages. B.J.

A82-28129 † The structure and basic parameters of a satellite system for the remote sensing of earth resources (O sostave i osnovnykh parametrakh kosmicheskoi sistemy issledovaniia prirodnykh resursov). A. S. Selivanov. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 22, 23. In Russian.

The characteristics of a remote sensing complex for the study of earth resources are briefly described. Particular attention is given to the characteristics and operation of a multispectral scanner of high and medium resolution. Also included in the complex are side-looking radar, a radar altimeter, and a microwave scanning radiometer. The organization of regional processing centers for the remote sensing data is considered. B.J.

A82-28130 † Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery (Opyt kompleksnogo izucheniia prirodnykh resursov Kalmytskoi ASSR na osnove kosmicheskoi informatsii). I. N. El'vartynov and Iu. P. Kienko. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 23-26. In Russian.

Various applications of the remote sensing of earth resources in the Kalmyk ASSR are reviewed. These applications include structural mapping, gas and oil exploration, hydrogeology, soil studies, and the mapping of agricultural lands and pastures. B.J.

A82-28132 † The earth resources program for the long-term orbital station Salyut 6 (Programma IPRZ na dolgovremennoi orbital'noi stantsii 'Saliut-6'). V. V. Arkhipov, A. D. Koval', V. V. Kovalenok, A. A. Tishchenko, and L. A. Ronzhin. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 30-36. In Russian.

A general review is given of the basic features of the remote sensing of earth resources from Salyut 6. Particular attention is given to the development of the earth resources program, preparatory steps towards the implementation of the program, and the acquisition, processing, and application of the data. B.J.

A82-28140 † Complex of units for the storage and automated processing of research data (Kompleks sredstv dlia nakopleniia i avtomatizirovannoi obrabotki dannykh pri nauchnykh issledovaniiakh). N. I. Baklashov, G. M. Solodikhin, and L. V. Sergeev. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 76-82. 5 refs. In Russian.

The paper describes an onboard system for the acquisition, storage, and processing of remote sensing data. Various storage techniques are discussed, and block diagrams of the various elements of the system are presented. B.J.

A82-28142 † Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements (Mashinnaia realizatsiia algoritmov kartirovaniia vlazhnosti pochvy po rezul'tatam SVCh-radiometricheskikh izmerenii). N. A. Armand, F. A. Mkrtchian, and A. M. Shutko. *(Vsesoiuznaia Konferentsiia po Problemam Issledovaniia Prirodnykh Resursov Zemli i Mirovogo Okeana, Aviatsionno-Kosmicheskimi Sredstvami, Moscow, USSR, Nov. 1980.) Geodeziia i Aerofotos'emka,* no. 1, 1982, p. 89-94. In Russian.

The paper describes a method for the compilation of soil moisture maps on the basis of microwave remote-sensing data. The technique involves the use of the BENSON graphic device, a general-purpose computer, and an analog-digital converter. The program for the implementation of the proposed algorithm is presented, and it is shown that the program makes it possible to obtain moisture maps of arbitrary gradation. B.J.

A82-28342 Instruments watch for impending earthquakes. B. C. Cole. *High Technology,* vol. 2, Mar.-Apr. 1982, p. 43-47, 50, 51.

The current state of the art of earthquake prediction techniques is discussed. Signs of an imminent earthquake detected upon the analysis of seismic records preceding the Sylmar quake in 1971 are described which have led to the development of more sophisticated instruments and procedures for monitoring seismic velocities and other precursors, including seismometers and seismographs, tiltmeters, linear-strain meters, creep meters, dilatometers, magnetometers, gravimeters, ohmmeters, well monitors, radon monitors and radio telescopes and satellites. Problems with the establishment of a useful earthquake theory on which to base a prediction model are considered, and plans for improving data collection and analysis, particularly from California and the western states, are outlined. The mixed record of previous earthquake predictions in the United States, the Soviet Union and China is noted, and indications of greater confidence in predictions over the next decade as the understanding of earthquake processes grows are pointed out. A.L.W.

A82-28466 † Complex examination of photorectifiers (Kompleksnoe issledovanie fototransformatorov). V. A. Moroz and L. I. Iablonskii. *Geodeziia i Kartografiia,* Feb. 1982, p. 42-44. In Russian.

A method for the complex investigation of photorectifiers is proposed which involves the simultaneous determination of instrumental accuracy and corrections to null points which characterize the operational accuracy of the basic elements of the instruments. This makes possible a more effective adjustment and improves the accuracy of transformation. B.J.

N82-16164*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.
THE MICROWAVE RADIOMETER SPACECRAFT. A DESIGN STUDY: EXECUTIVE SUMMARY
Uriel M. Lovelace *In its* The Microwave Radiometer Spacecraft Dec. 1981 p 1-14 refs

Avail: NTIS HC A11/MF A01 CSCL 22B

A conceptual design was developed for a microwave radiometer spacecraft (MRS) using a large passive reflector, microwave radiometer, and advanced control concepts soil moisture mapping from microwave sensing for global crop forecasting. Mission requirements and tradeoffs were defined, and major subsystems (structural, electromagnetic surface, and attitude control) conceptually designed. An overview of the mission and a summary of the study results are presented. J.M.S.

MISSION DEFINITION FOR A LARGE-APERTURE MICROWAVE RADIOMETER SPACECRAFT
Lloyd S. Keafer, Jr. *In its* The Microwave Radiometer Spacecraft Dec. 1981 p 17-32 refs

Avail: NTIS HC A11/MF A01 CSCL 22B

An Earth-observation measurements mission is defined for a large-aperture microwave radiometer spacecraft. This mission is defined without regard to any particular spacecraft design concept. Space data application needs, the measurement selection rationale, and broad spacecraft design requirements and constraints are described. The effects of orbital parameters and image quality requirements on the spacecraft and mission performance are discussed. Over the land the primary measurand is soil moisture; over the coastal zones and the oceans important measurands are salinity, surface temperature, surface winds, oil spill dimensions and ice boundaries; and specific measurement requirements have been selected for each. Near-all-weather operation and good spatial resolution are assured by operating at low microwave frequencies using an extremely large aperture antenna in a low-Earth-orbit contiguous mapping mode. LANDSAT-2 AND LANDSAT-3 FLIGHT EVALUATION REPORT, 23 JANUARY TO 23 JULY 1980
1 Aug. 1980 241 p ERTS
(Contract NAS5-21808)
(E82-10022; NASA-CR-164392; Doc-80SDS4229) Avail: NTIS HC A11/MF A01 CSCL 05B

Flight performance analyses of LANDSAT 2 and LANDSAT 3 are presented. Spacecraft operations and orbital parameters are summarized for each spacecraft. Data are provided on the performance and operation of the following onboard subsystems: power; attitude control; command/clock; telemetry; orbit adjust; magnetic moment compensation assembly; unified S-band/premodulation processor; electrical interface; thermal; narrowband tape recorders; wideband tape recorders; return beam vidicon; multispace multispectral scanner; and data collection. Orbit reference tables for January 1980 through July 1981 are included. A.R.H.

BRAZILIAN REMOTE SENSING ACTIVITIES, CURRENT AND PROSPECTIVE NEEDS
Nelson deJesusParada, Principal Investigator Apr. 1981 55 p Presented at the United Nations Regional Seminar on Remote Sensing Appl. and Satellite Commun. for Education and Develop., Toulouse, 21-25 Apr. 1981 Sponsored by NASA ERTS
(E82-10026; NASA-CR-164811) Avail: NTIS HC A04/MF A01 CSCL 05A

Remote sensing activities began in Brazil in 1968 and are now concentrated in a satellite and a side-looking radar program. The radar program systematically surveys the natural resources of the whole national territory in a level of detail compatible with a 1:1,000,000 scale, focusing on geology, geomorphology, soil, agricultural aptitude, ecology, and potential land use. The satellite program receives, processes, and disseminates remotely sensed data (basically LANDSAT data) and develops methodologies for applying these data for surveying, monitoring and mapping. Special emphasis is given to national priorities, particularly food and energy. Major results obtained and difficulties encountered in the following applications are described: crop forecasting, reforestation, mineral exploration, fishing chart models, land use, sedimentation in reservoirs, and deforestation in the Amazon forest. A decision was made to upgrade existing LANDSAT reception and processing stations to receive and process MSS and thematic data from LANDSAT-D and from SPOT and to construct two satellites for launch in 1987-1990. EVALUATION OF TWO AN/APS-94 SIDE-LOOKING AIRBORNE RADAR SYSTEMS IN THE DETECTION OF SEARCH AND RESCUE TARGETS Interim Report, Jan. 1978 - Aug. 1981
S. R. Osmer, N. C. Edwards, Jr., G. L. Hover, and T. J. Mazour Aug. 1981 163 p refs
(Contract DTCG39-80-C-80052)
(AD-A108404; USCG-D-64-81) Avail: NTIS HC A08/MF A01 CSCL 17/9

Side-Looking Airborne Radar (SLAR) detection data were gathered in conjunction with four visual detection experiments designed to improve search planning guidance contained in the National Search and Rescue Manual. HC-130 aircraft, equipped with either the Airborne Oil Surveillance System (AOSS) or SLAR/radar image processor (SLAR/RIP) configuration of the AN/APS-94C or D SLAR, conducted controlled searches for life rafts, small boats, and 41- to 95-foot Coast Guard vessels in Block Island Sound or open ocean. Using a microwave tracking system and SLAR data, the positions of searchers and targets were accurately reconstructed to facilitate the verification of detections on SLAR films or video tape. These data were used to evaluate the effects of environmental and controllable parameters on SLAR detection of the various target types. Target size/composition search altitude, swell height, wind speed, and humidity/precipitation were found to have a significant influence of SLAR detection performance. Upper-bound lateral range curves and sweep widths for SLAR search are included. Real-time performance tests for AN/APS-94D SLAR and system performance tests for new SLARs (AN/APS-131) are recommended. GRA

STUDY OF SYNTHETIC APERTURE RADAR IN 2D - 2FS OPERATION OVER THE OCEAN Final Report
Paris ESA 5 Mar. 1981 25 p
(Contract ESA-4586/81/F-DD(SC))
(ESA-CR(P)-1475) Avail: NTIS HC A02/MF A01

Synthetic aperture radar operation (imaging mode) for the European Remote Sensing program is considered. The 2D - 2FS function consists in operating in a low power mode (100 W RF) for 1.5 sec every 15 sec in order to image patches on the sea surface of 5 km by 5 km every 100 km, with the 5 km squares in the center of the beam. The data stream needs to be buffered such that a continuous (300 kbit/sec) data stream is delivered. The impact of such a mode on hardware, especially in terms of mass and power consumption, was studied. Results show that the 2D - 2FS option requires minor changes. One additional dispersive line and one additional box, containing the added hardware for data handling, are necessary. This represents 7 kg more (with redundancy) for payload. The average power consumption in wave mode becomes 150 W. Author (ESA)

(ESS/SS-1006; ESA-CR(P)-1468) Avail: NTIS HC A03/MF A01

An imaging microwave radiometer, a passive microwave instrument proposed for inclusion in the sensor payload of the Coastal Ocean Monitoring Satellite System (COMSS) spacecraft, was studied. The instrument detects microwave radiation at 5 frequencies in the range 6.8 to 36.5 GHz, each at vertical and horizontal polarization, and has an optional facility for measurements at 90 GHz. Results show that the instrument

meets the experiment requirements proposed by ESA and meets the accommodation constraints of the COMSS payload.

OBSERVATIONS WITH AN IMAGING 35 GHz RADIOMETER OF TERRAIN IN MALMSLATETT, JULY 1980
Gunnar Stenstroem and Ain Sume Oct. 1981 39 p refs
Original contains color illustrations
(FOA-C-30240-E1/E3) Avail: NTIS HC A03/MF A01

Microwave emission of militarily important terrain was studied, using Dicke radiometer measurements around an air traffic control tower. The radiometer has a 60 cm parabolic Cassegrain antenna, controlled through a desk top computer, which also manages the data sampling and recording. The radiometric images were color-coded and presented on-line on a TV monitor. A selected part of the scenery was monitored once every hour in order to examine time variations of the observed antenna temperature and their correlation with day-to-night and meteorological changes. The significance of reflected, cold sky radiation in smooth surfaces (metals, plastics, roads) is demonstrated, resulting in a contrast with the less reflective surroundings.

AUTOMATIC ANALYSIS OF MULTISPECTRAL IMAGES
Luciano Vieira Dutra, Ricado Cartaxo Modesto deSouza, Fernando Augusto Mitsuo, II, and Jose Carlos Moreira Aug. 1981 33 p refs In PORTUGUESE; ENGLISH summary
(INPE-2212-MD/009) Avail: NTIS HC A03/MF A01

Some ideas of automatic multispectral image analysis are introduced. Automatic multispectral image analysis plays a central role in numerically oriented remote sensing systems. It presupposes the utilization of electronic equipments, mainly computers and their peripherals, to help people to interpret the information contained in multispectral digital imagery. This necessity derives from the great amount of multispectral data gathered by remote sensors within satellites and airplanes. When the number of channels or spectral bands is increased, the interpretation becomes more complex and subjective. In some cases, for example, in harvest estimation in national or regional level, it is imperative to use computer systems to complete the work within the time required. Automatic analysis also aimes to eliminate subjective factors that appear in the human interpretation, so increasing the global precision.

GUIDELINES FOR SPACEBORNE MICROWAVE REMOTE SENSORS
Viqui Litman (Applied Media, Inc., Greenbelt, Md.) and John Nicholas Mar. 1982 87 p refs
(Contract NASw-3398)
(NASA-RP-1086) Avail: NTIS HC A05/MF A01 CSCL 14B

A handbook was developed to provide information and support to the spaceborne remote sensing and frequency management communities: to guide sensor developers in the choice of frequencies; to advise regulators on sensor technology needs and sharing potential; to present sharing analysis models and, through example, methods for determining sensor sharing feasibility; to introduce developers to the regulatory process; to create awareness of proper assignment procedures; to present sensor allocations; and to provide guidelines on the use and limitations of allocated bands. Controlling physical factors and user requirements and the regulatory environment are discussed. Sensor frequency allocation achievable performance and usefulness are reviewed. Procedures for national and international registration, the use of non-allocated bands and steps for obtaining new frequency allocations, and procedures for reporting interference are also discussed.

SATELLITE SCATTEROMETER FEASIBILITY STUDY. VOLUME 1: TECHNICAL RESULTS Final Report
R. Anders, G. Bommas, W. Gieraths, W. Gilg, P. Hans, M. Haimerl, H. Hoelzl, A. Kuehnle, H. Schuessler, P. Stuerzenhofaecker et al Paris ESA Apr. 1981 194 p refs 2 Vol.
(Contract ESA-4367/80/F-DD(SC))
(ESA-CR(P)-1492-Vol-1) Avail: NTIS HC A09/MF A01

A scatterometer for ERS 1 is described. A wind sensor determines vector fields within a 400 km sweep parallel to satellite motion. Individual vectors are extractable from 50 X 50 km cells. Wind speeds between 4 and 24 m/sec are measured with an angular accuracy of + or - 20 deg. A wave sensor handles spectra between 100 and 1000 m wavelength. Measurements are taken with a spacing of 100 km or less along the satellite track. Data are extractable from 5 x 5 km resolution cells. Wind speed and wind direction measurements are derived from Seasat data and of two-dimensional ocean wave spectra measurement are derived from the synthetic aperture radar mode.

SATELLITE SCATTEROMETER FEASIBILITY STUDY. VOLUME 2: DATA EXTRACTION ALGORITHM AND ERROR SIMULATION FOR WIND SENSOR Final Report
P. Hans Paris ESA Apr. 1981 100 p ref 2 Vol.
(Contract ESA-4367/80/F-DD(SC))
(ESA-CR(P)-1492-Vol-2) Avail: NTIS HC A05/MF A01

The ERS 1 scatterometer operation was computer simulated to: (1) test the Moore's relationship between the backscattering coefficient sigma deg and wind speed/direction, (2) investigate the influence of statistical errors in the sigma deg measurement on the resultant wind parameters, and (3) investigate antenna configurations with respect to functional performance and hardwear realization. Erroneous a sub zero parameter values in the radar sea return model cause errors mainly in wind speed, while erroneous a sub 2 causes errors in wind direction, and a sub 1 has little effect. The dual beam/dual polarization concept is recommended.

(Contract ESA-4427/80/F-DD(SC))
(Spar-R.1090-Issue-A; ESA-CR(P)-1502) Avail: NTIS HC A05/MF A01

Sea scattering, radar parameter selection, performance characteristics such as acquisition and tracking, and operation in rain and over land were studied in order to design a radar altimeter. Tradeoffs covering the antenna, microwave subsystem, signal processor, and altimeter controller were performed.

A configuration consisting of a full deramp radar pulse compression system operating at 13.7 GHz, with a maximum likelihood estimator tracker/processor is chosen. The design meets the specification in all respects, has better performance and less weight than the Seasat altimeter, yet is fully redundant. A costed development plan completely compatible with the ERS 1 schedule is outlined. Author (ESA)

(Contract ESTEC-4484/80/NL-PP(SC))
(FOK-RV-R-81-064; ESA-CR(P)-1506) Avail: NTIS HC A08/MF A01

A multistage passive cryogenic cooler was designed for the ocean color monitor (OCM) for ERS 1. Mathematical models of thermal and mechanical behavior support the concept of a radiator located in a parabolic reflector. Technologically critical areas of the design are compared with corresponding components in the optical imaging instrument, i.e. the glass reinforced thermal insulation/suspension straps, the suspension system integrated in the cooler, the parabolic reflector, and the cold stage radiator. A set of critical components suitable for both coolers is feasible. A three stage breadboard cooler is described. The multilayer insulation (MLI) radiator cools the MLI support, the first stage cools the paraboloid. The second stage is the cold stage radiating its heat loads by the open faced honeycomb radiator to space. The suspension of the first stage consists of dummies representing the thermal behavior of the corresponding OCM straps. The outside mounting ring is sufficiently stiff to support the cooler, and is used for mounting the cooler in the test chamber. Author (ESA)

Specifications are described for a recently developed prototype multispectral data acquisition system which consists of multiband radiometer with 8 bands between 0.4 and 12.5 micrometers and a data recording module to record data from the radometer and ancillary sources. The system is adaptable to helicopter, truck, or tripod platforms, as well as hand-held operation. The general characteristics are: (1) comparatively inexpensive to acquire, maintain and operate; (2) simple to operate and calibrate; (3) complete with data hardware and software; and (4) well documented for use by researchers. The instrument system is to be commercially available and can be utilized by many researchers to obtain large numbers of accurate, calibrated spectral measurements. It can be a key element in improving and advancing the capability for field research in remote sensing. A.R.H.

CLOUD TOP SCANNING RADIOMETER (CTS): USER'S GUIDE

K. S. Brown Nov. 1981 30 p refs
(NASA-TM-83887; NAS 1.15:83887) Avail: NTIS HC A03/MF A01 CSCL 04B

The CTS maps the Earth's surface with a resolution of 0.1 km from an altitude of 18km with 60km side-to-side coverage of the field. It has three spectral channels. The 0.625 micrometer centered visual channel detects reflectance to within 1 percent. The 6.75 micrometer centered water vapor channel detects changes in temperature of less than one degree Kelvin at 175 K. The 11.5 micrometer centered infrared window channel detects changes of less one half degree Kelvin at 175 K. The data can be converted graphically into three display images of the scene. Values for scene temperature and albedo are calculated from calibration equations. The equations were derived from in-situ and laboratory measurements. Intercomparisons of the flight data temperatures with ground based and other remote sensor results established the certainty of the derived temperature values to within 3 K over a wide temperature range (180 to 320 K). The system performance, calibration, and operation is successful and the engineering information describing this system should prove useful to scientists and potential users of the data. T.M.

GENERAL

Includes economic analysis.

A82-20412 **Landsat classification accuracy assessment procedures.** R. A. Mead (Virginia Polytechnic Institute and State University, Blacksburg, VA) and J. Szajgin (Technicolor Graphic Services, Inc., Sioux Falls, SD). *Photogrammetric Engineering and Remote Sensing*, vol. 48, Jan. 1982, p. 139-141.

At the November 12-14, 1980 conference on Landsat classification accuracy assessment procedures, attention was given to sampling procedures, statistical analysis techniques, and examples of projects concerned with accuracy assessment as well as the associated costs, logistical problems, and value of accuracy data to the remote sensing and resource management fields. It was commented during the proceedings that national standards for reporting thematic map accuracy have not been established, so that potential users of Landsat classifications often do not know the relative accuracies achievable in the identification of land-cover types. Moreover, Landsat classification accuracy assessments are often made with inadequate reference data, such as maps, photointerpretations or visits to the field. These reference data should be distributed throughout the scene in such a way that all cover types and transition zones between them are adequately represented. O.C.

A82-21280 **The Landsat program - Moving ahead.** A. Chiaviello. *Satellite Communications*, vol. 6, Feb. 1982, p. 34-36.

The operations and accomplishments of Landsats 1-3 are reviewed, and attention is given to the capabilities and uses of Landsat D. Landsats 1-3 fly at a 510 mi altitude in polar orbits, taking photographs of 115 by 115 km areas of the earth surface for transmittance to cover 100 countries. False color composites are developed with color coding for vegetation, water, cities, and highways. Multispectral data on minerals and oil locations, population estimates, crop yield estimates, and for disaster warnings have been gathered, along with data for resources planning and environmental monitoring. The Landsat-D satellite will carry a Thematic Mapper besides the Multispectral Scanner in a 435 mi altitude orbit and transmit at X-band and S-band frequencies. The Thematic Mapper will have 30 m resolution and the whole package will generate 800 images/day. M.S.K.

A82-21875 **Remote sensing for natural resources: An international view of problems, promises and accomplishments.** Moscow, ID, University of Idaho, 1980. 527 p.

Aspects of remote sensing which were discussed included historical uses of remote sensing and reports on current applications in forestry, in international assistance programs, for spatial classification of multisource data types for lithologic mapping in Southwestern Idaho, and for rangeland sensing. Interactive roles between remote sensing and management information/mapping systems in resource inventories were discussed, along with Landsat contributions to national and regional resource inventories, techniques for obtaining multiresource information from remote sensing and ancillary data sources for resources in Costa Rica, and computer analysis of remote sensing data. Consideration was given to applications of remote sensing to pest control, in identifying wind energy sites, for crops identification, and for mapping world forests and nonrenewable resources. M.S.K.

A82-22149 **An intelligent earth sensing information system.** T. H. Fay (Southern Mississippi, University, Hattiesburg, MS), J. Nazemetz (Oklahoma State University, Stillwater, OK), D. M. Sandford (Rutgers University, New Brunswick, NJ), V. Taneja (Western Illinois University, Macomb, IL), and P. Walsh (Fairleigh Dickinson University, Teaneck, NJ). *Photogrammetric Engineering and Remote Sensing*, vol. 48, Feb. 1982, p. 281-286. 9 refs.

By the year 2000, problems related to the expected increase in the world population will require for their solution a highly effective widespread management of earth resources with the aid of remote earth sensing. The cost of operating an earth sensing system can be greatly reduced through the use of artificial intelligence techniques to achieve goal oriented data gathering, information extraction using a world model, and direct user interfacing. A technology feasibility study was conducted to investigate the use of advanced and intelligent automation in space. The concept of an ambitious earth resource monitoring system directed toward future needs was developed as a result of this study. A proposal is made for the extensive use of artificial intelligence techniques within an autonomous satellite system to acquire and interpret data required by future users at as low a cost as possible. A82-24343 # **Remote sensing and international law.** C. Q. Christol (Southern California, University, Los Angeles, CA). In Annals of air and space law. Volume 5. Toronto, Carswell Co., Ltd.; Paris, Editions A. Pedone, 1980, p. 375-426. 90 refs.

Legal aspects of spaceborne remote sensing are reviewed, with consideration given to a definition of remote sensing, a functional approach to remote sensing, the emergence of contending positions on remote sensing, and the range of legal viewpoints in 1980. It is concluded that it has become increasingly evident during the COPUOS negotiations relating to the space-based remote sensing of the earth and its natural resources that substantial obstacles lie in the way of acceptance of fundamental principles concerning this matter. B.J.

A82-26123 **Some problems concerning the effective use of remote sensing (Zu einigen Problemen der effektiven Nutzung der Erdfernerkundung).** P. Bormann (Deutsche Akademie der Wissenschaften, Zentralinstitut für Physik der Erde, Potsdam, East Germany). *Gerlands Beiträge zur Geophysik*, vol. 91, no. 1, 1982, p. 13-24. 13 refs. In German.

The paper investigates a number of problems in remote sensing relating to data aquisition, information extraction, and the utilization of information, in an effort to increase its effectiveness. Emphasis is on the conception of suitable remote sensing systems; the importance of accessibility, continuity, and timelessness of data; and the acceptability and feasibility of a remote sensing system as related to the scientific-technical, economical, infrastructural and environmental conditions of a given country. The assessment of cost benefits of remote sensing is discussed, and information extraction and integration of results into traditional disciplines, information systems and decision making are considered. D.L.G.

A82-27169 **Imaging the earth. I - The troubled first decade of Landsat.** M. M. Waldrop. *Science*, vol. 215, Mar. 26, 1982, p. 1600-1603.

The coming launching of Landsat-D in July 1982 follows a decade of problems between NASA and users of Landsat data. The users wanted the continued use on Landsat-D of the multispectral scanner that had been aboard previous Landsats, since they had made heavy investments in computers, software and trained personnel to process the data obtained through that scanner. NASA, however, had planned to replace the scanner with a thematic mapper that advances the 80-meter resolution of the MSS to 30 meters and senses in not four spectral bands but seven. Users also wanted a far higher map production rate from NASA. Although it appeared that Landsat-D might go into orbit without the thematic mapper, the problems were finally resolved as NASA achieved high-volume map output and decided to put both the MSS and the mapper into orbit. C.D.

A82-27501 **Scientific lectures on aviation and astronautics 1980 (Nauchnye chteniia po aviatsii i kosmonavtike 1980 g.).** Edited by A. Iu. Ishlinskii. Moscow, Izdatel'stvo Nauka, 1981. 336 p. In Russian.

Papers from the 1979 and 1980 Gagarin Lectures on Aviation and Astronautics are presented. Attention is given to such topics as directional solidification in conditions of weightlessness, scientific-technical and organizational problems of cosmonaut training, the remote sensing of earth resources, the ballistic-navigational support for the Salyut 6-Soyuz-Progress complex, and the automation of the thermal-stress analysis of flight vehicles. Also considered are the development of spacecraft power supply systems, space biomedical studies, method for the design of flight-vehicle control systems, problems of space-flight mechanics, and the development of life support systems. B.J.

A82-27506 † **Present and future studies of natural resources and the environment from space (Kosmicheskoe prirodovedenie segodnia i zavtra).** Iu. P. Kienko. In: Scientific lectures on aviation and astronautics 1980. Moscow, Izdatel'stvo Nauka, 1981, p. 50-56. In Russian.

The advantages of space data on natural resources, as compared with conventional sources of such data, are described. Current trends in remote sensing technology are reviewed, and examples are presented illustrating the application of remote sensing data to solve various scientific and economic problems. B.J.

A82-27543 † **Development of cooperation between CMEA member countries in the development and utilization of space-based systems for the remote sensing of earth resources and the environment (Razvitie sotrudnichestva stran-chlenov SEV v oblasti sozdaniia i ispol'zovaniia kosmicheskikh sistem issledovaniia prirodnykh resursov i okruzhaiushchei sredy).** B. A. Chumachenko, V. V. Marchenko, Iu. A. Tiurin, and E. P. Vlasov. In: Problems of space studies. Moscow, Mezhdunarodnyi Tsentr Nauchnoi i Tekhnicheskoi Informatsii, 1981, p. 13-22. 10 refs. In Russian.

The development of remote sensing systems for geological services is examined with reference to cooperation between CMEA member countries. Attention is given to the organization of the sequential processing and complex integration of space and ground data in relation to the prediction of earth resources on the basis of a problem-oriented man-machine system. The Region system, dedicated to geological prediction, is considered as an example of such a system. B.J.

A82-27669 # **Earth sensing from space - Commercial and international aspects.** A. W. Frutkin (Burroughs Corp., Pacific Canada Div., Detroit, MI). In: International Symposium on Remote Sensing of Environment, 15th, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volume 3. Ann Arbor, MI, Environmental Research Institute of Michigan, 1981, p. 1121-1126.

A critical evaluation is conducted of problems and promises related to earth sensing operations from space, taking into account developments occurring during the last two or three years. In a quick survey of the fundamental elements of the present situation, it is found that there were no changes with respect to the space segment during the last two years. Neither has there been any great increase in the use of the data during the same period. Attention is also given to the absence of substantial changes regarding the price of data, the transfer of responsibility for a future operational system to NOAA, national programs in France and Japan, and the absence of a real provision for continuity beyond Landsats D/D-prime. All hope and planning for the future seem to be a function of legislation to be proposed for a private sector follow-on to Landsats D/D-prime. After an investigation of the envisaged private-sector solution, it is concluded that the primary role should be played by government. G.R.

European remote sensing activities are reviewed while development and utilization trends are identified. Existing and planned satellite systems are described. Remote sensing applications are listed by country in the European Economic Community. Cartography, geology, agriculture, silviculture, and land and water resources management are mentioned among other user disciplines. Applications are summarized in three categories: terrestrial, maritime, and coastal. Although maritime and coastal uses of remote sensing data are less well developed than terrestrial applications, economic, social and political benefits which can be accrued by Europe are sure to provide a strong incentive to continuing development. REMOTE SENSING IN LATIN AMERICA: TECHNOLOGY AND MARKETS FOR THE 1980'S
Lawrence J. Jungman Aug. 1981 16 p refs
(AD-A108784) Avail: NTIS HC A02/MF A01 CSCL 22/2

A review is made on the impact of satellite derived remote sensing data in Latin America. Data availability has generated a phenomenal growth in the user community in Latin America, and new sensor systems planned and proposed are viewed as a further impetus to an increased market in the Americas. The international institutionalization of remote sensing interests in the area is an indicator submitted as a viable force in the continued, future market and transfer of technology. The availability of required training and funding for special projects by these institutions is reviewed. Proposals are made for special training to prepare for increased digital and cartographic applications that will be required in the expanded users market of the 1980s. GRA

Ideas for new businesses specializing in using remote sensing and computerized spatial data systems were developd. Each such business serves as an 'information middleman', buying raw satellite or aircraft imagery, processing these data, combining them in a computer system with customer-specific information, and marketing the resulting information products. Examples of the businesses the project designed are: (1) an agricultural facility site evaluation firm; (2) a mass media grocery price and supply analyst and forecaster; (3) a management service for privately held woodlots; (4) a brokerage for insulation and roofing contractors, based on infrared imagery; (5) an expanded real estate information service. In addition, more than twenty-five other commercially attractive ideas in agribusiness, forestry, mining, real estate, urban planning and redevelopment, and consumer information were created. The commercial feasibility of the five business was assessed. This assessment included market surveys, revenue projections, cost analyses, and profitability studies. The results show that there are large and enthusiastic markets willing to pay for the services these businesses offer, and that the businesses could operate profitably. M.G.

SUBJECT INDEX

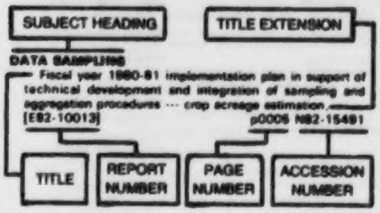
Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
DATA SAMPLING
Fiscal year 1980-81 implementation plan in support of technical development and integration of sampling and aggregation procedures --- crop acreage estimation
[E82-10013]
p0005 N82-15491
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section (of this supplement). If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments [INPE-2119-RPE/343] p0083 N82-17711

ATMOSPHERIC SCATTERING

Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data p0125 A82-21091

Microwave remote sensing. Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry --- Book p0126 A82-22877

An approach to path radiance correction in MSS images p0115 A82-27629

The effect of finite field size on classification and atmospheric correction [NASA-TM-83818] p0120 N82-19645

ATMOSPHERIC SOUNDING

Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

Sounding the aerosol distribution over the Upper Rhine Valley in the Valley in the Speyer area by means of lidar p0079 N82-20782

ATMOSPHERIC TEMPERATURE

Multidimensional aspects. Ozone, temperature and transport p0081 N82-18772

MSU test of P-model p0121 N82-20614

AURORAL ZONES

Ionospheric troughs in Antarctica p0073 A82-21217

AURORAS

Recent auroral measurements using a field-widened interferometer spectrometer p0126 A82-21434

AUSTRALIA

A regional air quality model for the Kwinana industrial area of Western Australia p0075 A82-26403

Inland water quality assessment from Landsat data p0105 A82-27610

Topographic mapping using Landsat data p0082 A82-27615

A vegetation response model applied to range inventory and monitoring using Landsat MSS data p0060 A82-27643

A low cost NOAA/TIROS AVHRR receiving station --- Advanced Very High Resolution Radiometer p0130 A82-27681

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast [AD-A109050] p0098 N82-19802

Sample selection in foreign similarity regions for multicrop experiments [E82-10118] p0070 N82-21655

AUTOCORRELATION

Precision in the evaluation of Landsat autocorrelation - The terrain effect p0116 A82-27686

B

BACKSCATTERING

Influence of dissolved organic materials on turbid water optical properties and remote-sensing reflectance p0093 A82-20445

Volumetric effects in cross-polarized airborne radar data p0058 A82-21032

Crop classification using airborne radar and Landsat data p0058 A82-21033

Application and experimental verification of an empirical backscattering cross section model for the earth's surface p0081 A82-21036

A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038

Microwave remote sensing. Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry --- Book p0126 A82-22877

Remote sensing of rainfall rates using airborne microwave rain-scatterometer/radiometer p0105 A82-27639

Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980 [NASA-CR-166727] p0107 N82-19646

Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1) [ESA-CR(P)-1492-VOL-2] p0133 N82-19651

Atlas of the global distribution of the total ozone concentration according to satellite measurements [MITT-28] p0078 N82-19740

BANGLADESH

Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution p0063 A82-27687

Assessment of change in Bangladesh coastal regions p0076 A82-27696

BARLEY

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data [E82-10030] p0063 N82-16448

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments [E82-10039] p0064 N82-19614

BAYS (TOPOGRAPHIC FEATURES)

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin [E82-10021] p0106 N82-16439

Ship and satellite bio-optical research in the California Bight [NASA-CR-168681] p0098 N82-20823

BIBLIOGRAPHIES

Publications and reports on contracts and grants, 1980 [PB82-103219] p0138 N82-17792

BIOGRAPHY

Helmut Wolf. On the occasion of his 70th birthday [SER-E-18] p0084 N82-19603

BIOMASS

Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422

Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144

BIRDS

Remote sensing applications to resource problems in South Dakota [E82-10027] p0132 N82-16445

BLIGHT

Sonora exploratory study for the detection of wheat-leaf rust [E82-10133] p0070 N82-21661

BOUNDARIES

Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10162] p0087 N82-21686

BRAZIL

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state. Brazil p0058 A82-21092

A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

CNPq/INPE LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] p0118 N82-16441

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] p0091 N82-16442

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10025] p0081 N82-16443

Brazilian remote sensing activities current and prospective needs
[E82-10026] p0132 N82-16444

The severity of the Brazilian freeze of July 1981, as monitored by satellite
[INPE-2231-RPE/399] p0064 N82-17746

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] p0065 N82-19633

Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] p0066 N82-19639

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0097 N82-19704

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] p0097 N82-19778

The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065] p0078 N82-20588

Amazonas project Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil
[E82-10069] p0078 N82-20592

Survey of the cane-growing area of the state of Sao Paulo using LANDSAT data. Safra Year 1979/80, volume 2 --- maps, Brazil
[E82-10071] p0067 N82-20594

Land use in the Paraiba Valley through remotely sensed data --- Brazil
[E82-10072] p0079 N82-20595

Study project of intrusive rocks States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil
[E82-10076] p0092 N82-20599

Elevation of a cane-growing area of the state of Sao Paulo using LANDSAT data
[E82-10077] p0067 N82-20600

Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979 --- Mato Grosso do Sul, Brazil
[E82-10078] p0067 N82-20601

The LANDSAT system operated in Brazil by CNPq/INPE - results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605

Sample selection in foreign similarity regions for multicrop experiments
[E82-10118] p0070 N82-21655

BRIGHTNESS

Analysis of the direction-dependent radiation behavior in multispectral scanning data p0125 A82-21399

The spectral reflectance of certain soils --- Russian book p0059 A82-26577

Evaluation of snow-cover pollution in industrial regions using satellite TV images p0103 A82-27464

Landsat feature enhancement - Or, can we separate vegetation from soil p0060 A82-27622

A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657

BRIGHTNESS DISTRIBUTION

Albedo and brightness coefficients of snow cover p0103 A82-27465

BRIGHTNESS TEMPERATURE

Soil moisture determination - Experiments with passive microwave radiometers p0057 A82-19529

Microwave radiation from a natural snow field p0101 A82-19559

Microwave brightness temperature pattern over the Indian subcontinent and the surrounding oceans as observed by the satellite microwave radiometer /SAMIR/ onboard Bhaskara p0093 A82-19560

Theoretical and experimental studies of microwave emission signatures of snow p0125 A82-21034

Towards the definition of optimum sensor specifications for microwave remote sensing of snow p0125 A82-21035

Optical properties of snow p0101 A82-21922

An optical model for the microwave properties of sea ice
[NASA-TM-83865] p0095 N82-17561

Satellite-derived ice data sets no 1 Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] p0096 N82-17563

Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

BUILDINGS

Building and road extraction from aerial photographs p0074 A82-25140

C

CALCIUM CARBONATES

Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634

CALIBRATING

The accuracy potential of the modern bundle block adjustment in aerial photogrammetry p0111 A82-20401

Calibration and model reconstruction in analytical close-range stereophotogrammetry I - Mathematical fundamentals p0111 A82-20403

Calibration and model reconstruction in analytical close-range stereophotogrammetry II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

Radiometric calibration of the Coastal Zone Color Scanner on Nimbus 7 - A proposed adjustment p0127 A82-26963

Ground level reflectance measurement techniques - An evaluation with emphasis on the importance of spectral calibration p0116 A82-27689

Ozone measurements to 48Km with chemiluminescent ozone detectors
[AD-A110342] p0134 N82-21808

CALIFORNIA

Techniques for combining Landsat and ancillary data for digital classification improvement p0111 A82-20410

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] p0083 N82-17708

Applications systems verification and transfer project. Volume 3 Operational applications of satellite snow cover observations in California
[NASA-TP-1824] p0108 N82-20619

HCMM Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range Sacramento Valley, and the Modoc Plateau
[E82-10135] p0092 N82-21662

CANADA

Analyses of the Eastern Pacific without ship PAPA data --- buoys, radar and satellite to replace weathership p0093 A82-19139

The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

The Canadian north - Utility of remote sensing for environmental monitoring p0074 A82-24962

A timely and accurate potato acreage estimate from Landsat - Results of a demonstration p0060 A82-27621

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

Interpretation of Heat Capacity Mapping Mission images over Canada p0116 A82-27671

Landsat MSS applied to rangeland management in Western Canada p0063 A82-27697

Visual and digital analysis of H C M M data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

Development of a Canadian thermal infrared forest fire mapping operational program p0063 A82-27699

Heat Capacity Mapping Mission (HCMM) Interpretation of imagery over Canada
[E82-10070] p0079 N82-20593

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

CANALS

Applications of aircraft and satellite data for the study of archaeology and environment - Mekong Delta, Vietnam p0091 A82-27705

CANOPIES (VEGETATION)

Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4 p0073 A82-19826

Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407

Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422

Microwave radiation peculiarities of vegetative covers p0058 A82-21029

Investigation of the vegetative covers on ploughed areas by SLAR p0058 A82-21031

The estimation of the surface moisture of a vegetated soil using aerial infrared photography p0058 A82-21093

Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144

Stochastic models of cover class dynamics --- remote sensing of vegetation p0059 A82-27586

Dew and vapor pressure as complicating factors in the interpretation of spectral radiance from crops p0060 A82-27617

Landsat feature enhancement - Or, can we separate vegetation from soil p0060 A82-27622

Enhancement of Landsat data for Hudson Bay lowlands vegetation p0114 A82-27623

Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645

The influence of illumination and viewing geometry on the reflectance factor of agricultural targets p0061 A82-27646

An invertible coniferous forest canopy reflectance model p0062 A82-27679

Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

Thermal vegetation canopy model studies
[AD-A106422] p0064 N82-16455

Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20591

Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana
[E82-10106] p0068 N82-21647

A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657

Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670

Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671

Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672

Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

CASCADE RANGE (CA-OR-WA)

Applications systems verification and transfer project. Volume 3 Operational applications of satellite snow cover observations in California
[NASA-TP-1824] p0108 N82-20619

CASPIAN SEA

Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs p0103 A82-27467

Polarimetric method for the remote sensing of oil slicks on the sea surface p0095 A82-28135

CATALOGS (PUBLICATIONS)

AgRISTARS Interim catalog ground data summary, data acquisition year 1979
[E82-10032] p0064 N82-19608

CELESTIAL GEODESY

Orbital methods of celestial geodesy --- Russian book p0079 A82-25234

CELESTIAL REFERENCE SYSTEMS

Correlation identification of stellar configurations for purposes of the coordinate referencing of aerial and space images p0117 A82-28141

CENTRAL PROCESSING UNITS

Overview of digital processing of SAR data --- from Seasat-A p0128 A82-27589

Features of a generalized digital Synthetic Aperture Radar processor p0128 A82-27595

CHAPARRAL

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

CHEMILUMINESCENCE

Ozone measurements to 48Km with chemiluminescent ozone detectors
[AD-A110342] p0134 N82-21808

CHESAPEAKE BAY (US)

The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] p0096 N82-17798

CHLOROPHYLLS

Ship and satellite bio-optical research in the California Bight
[NASA-CR-168681] p0098 N82-20823

As-built design specification for PARHIS
[E82-10089] p0122 N82-21641

CINEMATOGRAPHY

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

CITIES

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Analysis of two Seasat synthetic aperture radar images of an urban scene p0074 A82-25452

An investigation of the ozone plume from a small city p0074 A82-26329

Phenomena modelling of remotely sensed data by image rationing p0076 A82-27670

Visual and digital analysis of H C M M data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

The effect of finite field size on classification and atmospheric correction [NASA-TM-83818] p0120 N82-19645

A study of model parameters associated with the urban climate using HCMM data [E82-10159] p0080 N82-21683

A study of model parameters associated with the urban climate using HCMM data --- analysis of St. Louis, Missouri infrared imagery [E82-10160] p0080 N82-21684

Applications of HCMM satellite data to the study of urban heating patterns [E82-10161] p0080 N82-21685

CLASSIFICATIONS

Landscape mapping and physical-geographical classification of the eastern part of the Chechen-Ingush, ASSR using space imagery p0073 A82-20339

Automation of the processing of aerial and space images for forest inventory p0057 A82-20350

Techniques for combining Landsat and ancillary data for digital classification improvement p0111 A82-20410

Landsat classification accuracy assessment procedures p0137 A82-20412

Crop classification using airborne radar and Landsat data p0058 A82-21033

Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns p0112 A82-21040

Information extraction from remotely sensed data - A user view p0112 A82-21089

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state, Brazil p0058 A82-21092

The use of contextual information to improve land cover classification of digital remotely sensed data p0112 A82-21094

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

Spectral reflectance of hydrophytes p0102 A82-24960

Building and road extraction from aerial photographs p0074 A82-25140

Modeling misregistration and related effects on multispectral classification p0113 A82-25455

Using known map category marginal frequencies to improve estimates of thematic map accuracy p0113 A82-25456

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application p0129 A82-27649

Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653

Detailed land use classification based on multitemporal Landsat-MSS-data p0076 A82-27657

Automatic and semi-automatic classification of Landsat agricultural crops p0061 A82-27664

Fanning - A classification algorithm for mixture landscapes applied to Landsat data of Maine forests p0062 A82-27668

Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677

An experiment in probabilistic relaxation for terrain cover classification of Kuwait from Landsat imagery p0062 A82-27680

Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0090 A82-27694

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil [E82-10025] p0081 N82-16443

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy [E82-10038] p0119 N82-19613

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur [E82-10058] p0065 N82-19633

The effect of finite field size on classification and atmospheric correction [NASA-TM-83818] p0120 N82-19645

Selection of attributes applied to multispectral images [INPE-2303-TDL/072] p0121 N82-19827

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation [E82-10067] p0066 N82-20590

Land use in the Paraiba Valley through remotely sensed data --- Brazil [E82-10072] p0079 N82-20595

An algorithm for spatial heirarchy clustering [E82-10081] p0121 N82-20604

As-Built design specification for UNIV4VEC [E82-10085] p0122 N82-21637

US corn and soybeans exploratory experiment [E82-10088] p0068 N82-21640

As-built design specification for PARHIS [E82-10089] p0122 N82-21641

As-built design specification for PARCLS [E82-10090] p0123 N82-21642

As-built design specification for MISMAP [E82-10091] p0123 N82-21643

As-built design specification for the CLASFYG program [E82-10092] p0068 N82-21644

An evaluation of ISOCLS and CLASSY clustering algorithms for forest classification in northern Idaho --- Elk River quadrange of the Clearwater National Forest [E82-10109] p0069 N82-21650

Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota, and Oklahoma [E82-10111] p0069 N82-21651

AgRISTARS: Supporting research. Classification of corn: Badhwar profile similarity technique --- us corn belt [E82-10150] p0071 N82-21676

CLIFFS

Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image p0082 A82-26843

CLIMATE

Visual and digital analysis of H C M M data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction p0121 N82-20608

Freeze prediction model --- Pennsylvania p0067 N82-20609

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

MSU test of P-model p0121 N82-20614

A satellite frost forecasting system for Florida p0079 N82-20615

CLIMATOLOGY

Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data p0075 A82-26980

Climate observing system studies: An element of the NASA Climate Research Program. Workshop report [NASA-TM-84040] p0078 N82-18808

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida [NASA-CR-166827] p0121 N82-20607

A study of model parameters associated with the urban climate using HCMM data [E82-10159] p0080 N82-21683

A study of model parameters associated with the urban climate using HCMM data --- analysis of St. Louis, Missouri infrared imagery [E82-10160] p0080 N82-21684

CLOUD COVER

Satellite observed cloud patterns associated with excessive precipitation outbreaks [PB80-215130] p0073 A82-19177

Diffusion model of cloud cover and its use in the analysis of satellite operations p0111 A82-20347

Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data p0075 A82-26980

Interpretation of Heat Capacity Mapping Mission images over Canada p0116 A82-27671

Heat Capacity Mapping Mission (HCMM): Interpretation of imagery over Canada [E82-10070] p0079 N82-20593

Dust from the Sahara in satellite images p0079 N82-20802

Development of a surface isolation estimation technique suitable for application of polar orbiting satellite data [E82-10122] p0123 N82-21656

Methods of editing cloud and atmospheric layer affected pixels from satellite data [E82-10154] p0123 N82-21678

Atlas of METEOSAT imagery [ESA-SP-1030] p0124 N82-21700

CLOUD PHOTOGRAPHS

Atlas of METEOSAT imagery [ESA-SP-1030] p0124 N82-21700

CLOUD PHOTOGRAPHY

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

CLOUD PHYSICS

Development and applications of techniques to process hydrometeor distribution data [AD-A109929] p0109 N82-20822

CLOUDS (METEOROLOGY)

Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653

Methods of editing cloud and atmospheric layer affected pixels from satellite data [E82-10046] p0119 N82-19621

COASTAL WATER

A photometric method for depth determination by aerial photography p0101 A82-19831

An approach to path radiance correction in MSS images p0115 A82-27629

A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674

Imaging microwave radiometer. Phase A study. Volume 1: Executive summary --- instrument for the European Remote Sensing system payload [ESS/SS-1006] p0132 N82-18564

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level [PB82-114703] p0097 N82-19796

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast [AD-A109050] p0098 N82-19802

Ship and satellite bio-optical research in the California Bight [NASA-CR-168681] p0098 N82-20823

COASTAL ZONE COLOR SCANNER

Radiometric calibration of the Coastal Zone Color Scanner on Nimbus 7 - A proposed adjustment p0127 A82-26863

COASTS

Integrated sensor system for collection of wave data applied to coastal engineering design p0094 A82-27602

Assessment of change in Bangladesh coastal regions p0076 A82-27696

Applications of aircraft and satellite data for the study of archaeology and environment - Mekong Delta, Vietnam p0091 A82-27705

Examination of the operational prospects for remote sensing --- in Europe [ESA-CR(P)-1476] p0138 N82-18569

Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei [E82-10073] p0091 N82-20596

COHERENT SCATTERING

A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038

Coherent scatter of microwaves from moderateily rough surfaces [AD-A106133] p0095 N82-16331

COLD WEATHER

The severity of the Brazilian freeze of July 1981, as monitored by satellite [INPE-2231-RPE/399] p0064 N82-17746

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida [E82-10040] p0064 N82-19615

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction p0121 N82-20608

COLOR CODING

Development and implementation of a low coist micro computer system for Landsat analysis and geograpihc data base application p0129 A82-27649

Matrix data analysis: Color/B and W coding is not always enough [AD-A108406] p0084 N82-18930

COLOR INFRARED PHOTOGRAPHY

Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611

COLORADO

Effect of aerosols on optical remotely sensed data p0115 A82-27654

Active microwave investigation of snowpacks: Experimental documentation, Colorado 1979-1980) [NASA-CR-166727] p0107 N82-19646

Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations: Colorado Field Test Center [NASA-TP-1825] p0108 N82-20620

Applications systems verification and transfer project. Volume 7: Cost/benefit analysis for the ASVT on operational applications of satellite snow-cover observations [NASA-TP-1828] p0109 N82-20623

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota [E82-10083] p0068 N82-21635

San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition [E82-10108] p0069 N82-21649

COLORIMETRY

Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4 p0073 A82-19826

COMMERCE

Program on stimulating operational private sector use of Earth observation satellite information [E82-10131] p0138 N82-21660

COMPUTER COMPATIBLE TAPES

Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications [E82-10020] p0118 N82-16438

COMPUTER GRAPHICS

A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050

Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping
p0129 A82-27648

The role of computer graphics in geographic research
p0117 A82-27923

Computer-assisted photo interpretation research at USAETL
[AD-A109366] p0121 N82-20628

The design and implementation of an operational, computer-based weather radar system --- rainfall maps
[RSRE-MEMO-3151] p0122 N82-21499

A digital technique for constructing variable-width lines
[AD-A110287] p0087 N82-21689

Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

COMPUTER PROGRAMS

Automatic linear recognition and analysis using computer program LIRA --- satellite imagery for earth observations
p0090 A82-27612

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

ELAS - A geobased information system that is transferable to several computers --- Earth resources Laboratory Applications Software p0115 A82-27666

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] p0063 N82-16448

Photogrammetry software A package for everyone
[AD-A108098] p0118 N82-17570

AgRISTARS Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] p0065 N82-19630

Development and applications of techniques to process hydrometeor distribution data
[AD-A109929] p0109 N82-20822

Ground registration of data from an airborne scatterometer
[E82-10084] p0068 N82-21636

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models
[E82-10086] p0122 N82-21638

As-built design specification for PARHIS
[E82-10089] p0172 N82-21641

As-built design specification for segment map (Sgmap) program
[E82-10094] p0123 N82-21646

Wheat stress indicator model. Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652

Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

COMPUTER SYSTEMS PROGRAMS

As-Built design specification for UNIV4VEC
[E82-10085] p0122 N82-21637

As-built design specification for PARCLS
[E82-10090] p0123 N82-21642

As-built design specification for MISMAP
[E82-10091] p0123 N82-21643

As-built design specification for the CLASFYG program
[E82-10092] p0068 N82-21644

COMPUTER TECHNIQUES

Optimal methods of computerized image conversion
p0111 A82-19833

Analytical triangulation of space photography
p0111 A82-20402

Image quality control in the Meteosat ground processing system p0125 A82-21090

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state, Brazil p0058 A82-21092

Remote sensing for natural resources. An international view of problems, promises and accomplishments --- Book p0137 A82-21875

A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143

Analog devices for the processing of aerial and space images for the study of water resources
p0104 A82-27476

Topographic mapping using Landsat data
p0082 A82-27615

Evaluation of large area crop estimation techniques
p0061 A82-27662

Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677

Natural resources inventories by computer-satellite mapping techniques in Chaco State, Argentine Republic, South America p0116 A82-27688

Structure of hardware and software at a regional center for the automated processing of aerial and space remote-sensing images p0130 A82-28128

Analytic methods of geodetic referencing of nontopographic images p0083 A82-28134

Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements p0131 A82-28142

Classification of systems for digital terrain simulation
p0117 A82-28468

Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] p0118 N82-16437

A satellite frost forecasting system for Florida
p0079 N82-20615

Context sensitive formulations of antenna pattern correction and side lobe compensation for NOSS/LAMMR real time processing
[NASA-CR-166789] p0122 N82-21457

Sonora exploratory study for the detection of wheat-leaf rust
[E82-10133] p0070 N82-21661

COMPUTERIZED SIMULATION

Accuracy of the normal case of close-range photogrammetry p0126 A82-22140

Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate
p0128 A82-27594

Satellite scatterometer feasibility study. Volume 2. Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] p0133 N82-19651

CONFERENCES

International Symposium on Remote Sensing of Environment, 15th, University of Michigan, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volumes 1, 2 & 3
p0127 A82-27576

Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD
p0077 A82-28295

AgRISTARS. Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] p0064 N82-19614

SAR image quality --- conference, Frascati, Italy, 11-12 Dec. 1980, synthetic aperture radar (SAR)
[ESA-SP-172] p0122 N82-21458

CONFORMAL MAPPING

Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

CONGRESSIONAL REPORTS

Technology and oceanography. An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844

CONIFERS

Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397

An invertible coniferous forest canopy reflectance model p0062 A82-27679

CONTEXT

The use of contextual information to improve land cover classification of digital remotely sensed data
p0112 A82-21094

Context dependent modeling --- for remote sensing data processing p0114 A82-27587

CONTOURS

Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

CONVECTION CURRENTS

The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] p0120 N82-19788

COORDINATE TRANSFORMATIONS

Analytic methods of geodetic referencing of nontopographic images p0083 A82-28134

COORDINATES

Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

CORN

Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

Crop area estimates using ground-gathered and Landsat data A multitemporal approach p0062 A82-27676

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] p0064 N82-19610

AgRISTARS. Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] p0064 N82-19614

AgRISTARS. Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] p0065 N82-19631

Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635

Segment-level evaluation of the simulated aggregation test. US corn and soybean exploratory experiment
[E82-10061] p0066 N82-19636

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590

Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20591

US corn and soybeans exploratory experiment
[E82-10088] p0068 N82-21640

The 1981 Argentina ground data collection
[E82-10127] p0070 N82-21658

Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670

Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672

Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

AgRISTARS. Supporting research. Classification of corn Badhwar profile similarity technique --- us corn belt
[E82-10150] p0071 N82-21676

CORRELATION

Profiling sensitivity to image quality
[AD-A108405] p0084 N82-18931

CORRELATION COEFFICIENTS

Increase in correlation accuracy of remote sensing imagery by digital filtering p0113 A82-25454

CORRELATION DETECTION

Correlation identification of stellar configurations for purposes of the coordinate referencing of aerial and space images p0117 A82-28141

COST EFFECTIVENESS

Some problems concerning the effective use of remote sensing p0137 A82-26123

Applications systems verification and transfer project. Volume 7. Cost/benefit analysis for the ASVT on operational applications of satellite snow-cover observations
[NASA-TP-1828] p0109 N82-20623

CROP CALENDARS

Wheat stress indicator model. Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] p0064 N82-19607

AgRISTARS. Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] p0064 N82-19614

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634

Wheat stress indicator model. Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652

AgRISTARS. Supporting research. US crop calendars in support of the early warning project
[E82-10158] p0072 N82-21682

CROP GROWTH

Evaluation of the state of crops from satellite data
p0059 A82-27393

Automatic and semi-automatic classification of Landsat agricultural crops p0061 A82-27664

A technique for automatic labeling of Landsat agricultural scene elements by analysis of temporal-spectral patterns
p0062 A82-27678

Segment-level evaluation of the simulated aggregation test. US corn and soybean exploratory experiment
[E82-10061] p0066 N82-19636

System of forecasting agricultural crops using satellite observations of Earth
[E82-10079] p0067 N82-20602

Freeze prediction model --- Pennsylvania
p0067 N82-20609

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models
[E82-10086] p0122 N82-21638

AgRISTARS. Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing. Enumerator's manual, 1981 ground data survey
[E82-10116] p0069 N82-21653

CROP IDENTIFICATION

Experimental evaluation of methods of the automated interpretation of crops from a Fragment MSS image
p0057 A82-20349

Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422

The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026

Crop classification using airborne radar and Landsat data p0058 A82-21033

Remote sensing for natural resources. An international view of problems, promises and accomplishments --- Book p0137 A82 21875

An airphoto key for major tropical crops
p0058 A82-22142

Automatic and semi-automatic classification of Landsat agricultural crops p0061 A82 27664

A technique for automatic labeling of Landsat agricultural scene elements by analysis of temporal-spectral patterns
p0052 A82-27678

An autodigitizing procedure for ground-data labelling of Landsat pixels p0062 A82-27682

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] p0063 N82-16448

AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] p0065 N82-19631

AgRISTARS: Foreign commodity production forecasting. Project test reports document, volume 1 --- using North Dakota, South Dakota, Montana, and Minnesota
[E82-10087] p0068 N82-21639

Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota, and Oklahoma
[E82-10111] p0069 N82-21651

A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657

The 1981 Argentina ground data collection
[E82-10127] p0070 N82-21658

CROP INVENTORIES

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state, Brazil p0058 A82-21092

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Data base requirements in support of crop models p0060 A82-27588

A timely and accurate potato acreage estimate from Landsat - Results of a demonstration p0060 A82-27621

A vegetation response model applied to range inventory and monitoring using Landsat MSS data p0060 A82-27643

Evaluation of large area crop estimation techniques p0061 A82-27662

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

Crop area estimates using ground-gathered and Landsat data A multitemporal approach p0062 A82-27676

Brazilian remote sensing activities, current and prospective needs
[E82-10026] p0132 N82-16444

AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] p0064 N82-19608

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] p0064 N82-19610

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] p0064 N82-19614

Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635

Segment-level evaluation of the simulated aggregation test: US corn and soybean exploratory experiment
[E82-10061] p0066 N82-19636

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] p0066 N82-19639

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590

Survey of the cane-growing area of the state of Sao Paulo using LANDSAT data. Safra Year 1979/80, volume 2 --- maps, Brazil
[E82-10071] p0067 N82-20594

Elevation of a cane-growing area of the state of Sao Paulo using LANDSAT data
[E82-10077] p0067 N82-20600

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models
[E82-10086] p0122 N82-21638

AgRISTARS: Foreign commodity production forecasting. Project test reports document, volume 1 --- using North Dakota, South Dakota, Montana, and Minnesota
[E82-10087] p0068 N82-21639

US corn and soybeans exploratory experiment
[E82-10088] p0068 N82-21640

As-built design specification for PARCLS
[E82-10090] p0123 N82-21642

As-built design specification for the CLASFYG program
[E82-10092] p0068 N82-21644

Project communications/documentation standards manual
[E82-10093] p0068 N82-21645

AgRISTARS: Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing. Enumerator's manual, 1981 ground data survey
[E82-10116] p0069 N82-21653

Development of rotation sample designs for the estimation of crop acreages
[E82-10117] p0070 N82-21654

Sample selection in foreign similarity regions for multicrop experiments
[E82-10118] p0070 N82-21655

The 1981 Argentina ground data collection
[E82-10127] p0070 N82-21658

Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

AgRISTARS: Supporting research. Classification of corn: Badhwar profile similarity technique --- us corn belt
[E82-10150] p0071 N82-21676

CROP VIGOR

AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] p0065 N82-19628

AgRISTARS: Early warning and crop condition assessment. Patch image processor user's manual
[E82-10055] p0065 N82-19630

As-built design specification for PARHIS
[E82-10089] p0122 N82-21641

CROSS POLARIZATION

Volumetric effects in cross-polarized airborne radar data p0058 A82-21032

CRUSTAL FRACTURES

Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery p0089 A82-26015

CRYOGENIC COOLING

Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] p0134 N82-19653

CULTURAL RESOURCES

Accuracy of the normal case of close-range photogrammetry p0126 A82-22140

Locating prehistoric archaeological sites using Landsat p0129 A82-27638

CZECHOSLOVAKIA

Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470

D

DATA ACQUISITION

Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis p0073 A82-19179

An intelligent earth sensing information system p0137 A82-22149

Some problems concerning the effective use of remote sensing p0137 A82-26123

University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659

Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] p0107 N82-19304

Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] p0107 N82-19790

An introduction to image processing at Royal Aircraft Establishment, Farnborough, England --- U.S. and European satellite imagery
[RAE-TR-80107] p0122 N82-21565

AgRISTARS: Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing. Enumerator's manual, 1981 ground data survey
[E82-10116] p0069 N82-21653

A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669

Some altimetric signatures from Seasat over the mid-Pacific Seamount Range
[AD-A110419] p0099 N82-21691

DATA BASES

Data base requirements in support of crop models p0060 A82-27588

A data base of geologic field spectra p0090 A82-27600

An evaluation of the utility of smaller Landsat resolution elements /Resolution of Landsat resolution/ p0114 A82-27625

Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application p0129 A82-27649

University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659

DATA COLLECTION PLATFORMS

A microcomputer for control of data collection platforms --- GOES satellites
[INPE-2104-RPE/331] p0133 N82-18881

Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] p0107 N82-19304

DATA COMPRESSION

Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] p0120 N82-19649

Data rate reduction: Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] p0120 N82-19654

An algorithm for spatial heirarchy clustering
[E82-10081] p0121 N82-20604

Interpretation of remotely sensed image data and impact of cluster compression --- impact of cluster compression, users
[REPT-44 2866] p0124 N82-21699

DATA CORRELATION

Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data p0127 A82-26049

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841

Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452

LANDSAT imagery of the Venetian Lagoon: A multitemporal analysis
[E82-10036] p0119 N82-19612

Assessment of the quality of GATE area rainfall data from a Nimbus-5 radiometer
[NASA-CR-168512] p0109 N82-20807

Ground registration of data from an airborne scatterometer
[E82-10084] p0068 N82-21636

DATA MANAGEMENT

AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] p0064 N82-19608

DATA PROCESSING

The Seasat low rate data processing system p0093 A82-24061

Influence of illumination and viewing geometry and atmospheric composition on the 'tasseled cap' transformation of Landsat MSS data p0059 A82-24961

Mapsat compared to other earth-sensing concepts p0128 A82-27581

Information expectations from Landsat-D p0128 A82-27583

Context dependent modeling --- for remote sensing data processing p0114 A82-27587

Overview of digital processing of SAR data --- from Seasat-A p0128 A82-27589

Features of a generalized digital Synthetic Aperture Radar processor p0128 A82-27595

Strategies and uses of small distributed analysis centers as in the natural resource inventory of Venezuela p0115 A82-27636

Detection of volcanic ash fall area from Landsat MSS CCT data Eruption of Mt. Ontake in 1979 p0076 A82-27650

Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653

Detailed land use classification based on multitemporal Landsat-MSS-data p0076 A82-27657

University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659

A low cost NOAA/TIROS AVHRR receiving station --- Advanced Very High Resolution Radiometer p0130 A82-27681

Precision in the evaluation of Landsat autocorrelation - The terrain effect p0116 A82-27686

Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0090 A82-27694

Structure of hardware and software at a regional center for the automated processing of aerial and space remote-sensing images p0130 A82-28128

The structure and basic parameters of a satellite system for the remote sensing of earth resources p0131 A82-28129

The earth resources program for the long-term orbital station Salyut 6 p0131 A82-28132

Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020] p0118 N82-16438

NOSS altimeter algorithm specifications
[NASA-RP-1083] p0095 N82-16683

Study of synthetic aperture radar in 2D - 2FS operation over the ocean --- European Remote Sensing system
[ESA-CR(P)-1475] p0132 N82-18481

Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters p0118 N82-18656

Magsat science investigations
[E82-10045] p0085 N82-19620

Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] p0119 N82-19622

The LANDSAT system operated in Brazil by CNPq/INPE - results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

As-built design specification for segment map (Sgmap) program
[E82-10094] p0123 N82-21646

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154] p0123 N82-21678

DATA RECORDING

Proposed digital cartridge recording system for WRELADS --- laser airborne depth sounder
[AD-A109484] p0134 N82-20481

DATA REDUCTION

Use of GOES and TIROS/NOAA satellite data for snow-cover mapping p0101 A82-22145

Imaging the earth. I - The troubled first decade of Landsat p0137 A82-27169

Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452

Studies related to Magsat --- Backus effect and the westward drift
[E82-10050] p0085 N82-19625

Improved definition of crustal anomalies for Magsat data
[E82-10051] p0085 N82-19626

Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] p0120 N82-19649

The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612

Development and applications of techniques to process hydrometeor distribution data
[AD-A109929] p0109 N82-20822

An evaluation of ISOCLS and CLASSY clustering algorithms for forest classification in northern Idaho --- Elk River quadrange of the Clearwater National Forest
[E82-10109] p0069 N82-21650

Compatibility study of the MAGSAT data and aeromagnetic data
[E82-10136] p0123 N82-21663

Continuation of potential field data to a common altitude --- magsat data
[E82-10138] p0123 N82-21665

Separation of internal and external fields A new technique of data screening --- MAGSAT data
[E82-10139] p0123 N82-21666

DATA SAMPLING

Sampling for thematic map accuracy testing p0111 A82-20411

Landsat classification accuracy assessment procedures p0137 A82-20412

Development of rotation sample designs for the estimation of crop acreages
[E82-10117] p0070 N82-21654

Sample selection in foreign similarity regions for multicrop experiments
[E82-10118] p0070 N82-21655

DATA SMOOTHING

Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

DATA STORAGE

Complex of units for the storage and automated processing of research data p0131 A82-28140

DATA SYSTEMS

ELAS - A geobased information system that is transferable to several computers --- Earth resources Laboratory Applications Software p0115 A82-27666

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

A microcomputer for control of data collection platforms --- GOES satellites
[INPE-2104-RPE/331] p0133 N82-18881

Wheat stress indicator model, Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652

Future Earthnet Dissemination Systems (FEDS) study Executive summary --- remote sensing data transmission
[REPT-3318] p0124 N82-21698

DATA TRANSMISSION

Future Earthnet Dissemination Systems (FEDS) study Executive summary --- remote sensing data transmission
[REPT-3318] p0124 N82-21698

DAYTIME

Registration of heat capacity mapping mission day and night images p0113 A82-22146

DECIDUOUS TREES

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

DEER

Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19809

DEFORESTATION

Amazonas project Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil
[E82-10069] p0078 N82-20592

DELAWARE

Locating prehistoric archaeological sites using Landsat p0129 A82-27638

DELAWARE BAY (US)

Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia
[E82-10064] p0108 N82-20587

DELTAS

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

Remote sensing of salinity in the San Francisco Bay Delta p0102 A82-26839

Assessment of change in Bangladesh coastal regions p0076 A82-27696

Applications of aircraft and satellite data for the study of archaeology and environment - Mekong Delta, Vietnam p0091 A82-27705

DENSITY DISTRIBUTION

Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] p0085 N82-19731

DEPTH MEASUREMENT

A photometric method for depth determination by aerial photography p0101 A82-19831

Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] p0107 N82-18664

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109060] p0098 N82-19802

Some altimetric signatures from Seasat over the mid-Pacific Seamount Range
[AD-A110419] p0099 N82-21891

DESERTS

Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4 p0073 A82-19826

DIELECTRIC PROPERTIES

Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030

Dielectric properties of snow
[NASA-CR-166764] p0107 N82-19638

DIGITAL DATA

The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409

The use of contextual information to improve land cover classification of digital remotely sensed data p0112 A82-21094

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841

Automatic linear recognition and analysis using computer program LIRA --- satellite imagery for earth observations p0090 A82-27612

Remote sensing in Latin America Technology and markets for the 1980's
[AD-A108784] p0138 N82-20626

Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

DIGITAL FILTERS

Increase in correlation accuracy of remote sensing imagery by digital filtering p0113 A82-25454

DIGITAL RADAR SYSTEMS

Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate p0128 A82-27594

DIGITAL SIMULATION

Classification of systems for digital terrain simulation p0117 A82-28468

Watershed model study using LANDSAT data p0106 N82-17602

DIGITAL SYSTEMS

Proposed digital cartridge recording system for WRELADS --- laser airborne depth sounder
[AD-A109484] p0134 N82-20491

DIGITAL TECHNIQUES

Techniques for combining Landsat and ancillary data for digital classification improvement p0111 A82-20410

Information extraction from remotely sensed data - A user view p0112 A82-21089

Digital photography techniques p0112 A82-21398

Classification of ice radar imagery p0113 A82-22891

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data p0127 A82-26049

A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050

Methods for the processing of synthetic-aperture radar signals when solving problems of the national economy /Review/ p0113 A82-26726

An automatic optimum kernel-size selection technique for edge enhancement p0113 A82-26840

Features of a generalized digital Synthetic Aperture Radar processor p0128 A82-27595

Enhancement of Landsat data for Hudson Bay lowlands vegetation p0114 A82-27623

The use of digital terrain model in the rectification of satellite-borne imagery p0115 A82-27626

Forest change detection p0061 A82-27644

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

Detection of volcanic ash fall area from Landsat MSS CCT data Eruption of Mt. Ontake in 1979 p0076 A82-27650

An autodigitizing procedure for ground-data labelling of Landsat pixels p0062 A82-27682

Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution p0053 A82-27687

Visual and digital analysis of H C M M data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

The role of computer graphics in geographic research p0117 A82-27923

Construction of digital models of statistically uniform characteristics on the basis of multispectral space imagery p0117 A82-28144

Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452

Matrix data analysis Color/B and W coding is not always enough
[AD-A108406] p0084 N82-18930

The LANDSAT system operated in Brazil by CNPq/INPE - results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

Computer-assisted photo interpretation research at USAETL
[AD-A109366] p0121 N82-20628

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

As-built design specification for segment map (Sgmap) program
[E82-10094] p0123 N82-21646

A digital technique for constructing variable-width lines
[AD-A110287] p0087 N82-21689

Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

DISASTERS

Detection of natural disasters via Meteosat p0075 A82-27040

DISCRIMINANT ANALYSIS (STATISTICS)

The logit classifier - A general maximum likelihood discriminant for remote sensing applications p0128 A82-27591

DISCRIMINATION

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154] p0123 N82-21678

DIURNAL VARIATIONS

HCMM detection of high soil moisture areas --- by diurnal temperature observation p0059 A82-24963

Ideal phase in estimating the spatial gradient of magnetic daily variations recorded by magnetometer arrays p0127 A82-26000

Diurnal variation of summer convection over West Africa and the Tropical Eastern Atlantic during 1974 and 1978 p0075 A82-26700

Interpretation of Heat Capacity Mapping Mission images over Canada p0116 A82-27671

Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] p0064 N82-19615

On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] p0120 N82-19656

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes
[E82-10148] p0087 N82-21675

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

DOPPLER EFFECT

Experiments in satellite Doppler control positioning at sea p0086 N82-20581

DOPPLER RADAR

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17806

DRAINAGE

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

DRAINAGE PATTERNS

Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611

Watershed model study using LANDSAT data p0106 N82-17602

Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] p0078 N82-19641

Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605

DROUGHT

Satellite sensing for extraction of groundwater resources information p0105 A82-27613

DUST STORMS

Dust from the Sahara in satellite images p0079 N82-20802

E

EARTH (PLANET)

Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] p0085 N82-19731

EARTH ALBEDO
Regional properties of angular reflectance models
p0083 N82-17599

EARTH AXIS
Developments in geodesy within the scope of Helmut Wolf's work
p0084 N82-19604

EARTH CORE
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10162]
p0087 N82-21686

EARTH CRUST
Ring structures in the earth's crust, and their significance for geology and methods for their investigation
p0081 A82-28136

Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427]
p0083 N82-17708

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163]
p0084 N82-17715

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10043]
p0084 N82-19618

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10044]
p0085 N82-19619

Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049]
p0091 N82-19624

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10062]
p0086 N82-20585

Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10147]
p0087 N82-21674

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10152]
p0092 N82-21677

EARTH MANTLE
Ore deposits in Africa and their relation to the underlying mantle
p0090 A82-26604

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10044]
p0085 N82-19619

Gravity and geoid anomalies of the Philippine Sea Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639]
p0085 N82-19732

Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10162]
p0087 N82-21686

EARTH OBSERVATIONS (FROM SPACE)
The effectiveness of instrumented visual studies of the earth from space
p0114 A82-27506

International Symposium on Remote Sensing of Environment, 15th, University of Michigan, Ann Arbor, MI, May 11-15, 1981, Proceedings Volumes 1, 2 & 3
p0127 A82-27576

Spaceborne radar observation of the earth surface
p0127 A82-27578

Characterizing user requirements for future land observing satellites
[NASA-TM-83867]
p0081 N82-17562

Satellite Earth resources data, module U-3
[E82-10035]
p0119 N82-19611

EARTH RESOURCES
Spaceborne radar observation of the earth surface
p0127 A82-27578

EARTH RESOURCES INFORMATION SYSTEM
Flexible processing of remote sensing data through integration of image processing and geobased information systems
p0116 A82-27667

EARTH SURFACE
Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4
p0073 A82-19826

Analysis of space imagery to compile a geomorphological map of the world
p0089 A82-20338

Application and experimental verification of an empirical backscattering cross section model for the earth's surface
p0081 A82-21036

Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data
p0125 A82-21091

Area determination by means of the method of finite elements
p0082 A82-26048

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle
p0114 A82-26841

The effectiveness of instrumented visual studies of the earth from space
p0114 A82-27505

Interpretation of Heat Capacity Mapping Mission images over Canada
p0116 A82-27671

On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10]
p0120 N82-19656

Cloud Top Scanning radiometer (CTS) User's guide
[NASA-TM-83887]
p0135 N82-21826

EARTHQUAKES
The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt
p0089 A82-20341

Instruments watch for impending earthquakes
p0131 A82-28342

EAST GERMANY
Interpretation of multispectral aerial photographs of Lake Mueggelsee
p0104 A82-27473

Spectrometric studies of the water composition of Lake Mueggelsee
p0104 A82-27474

ECOLOGY
Topographic mapping using Landsat data
p0082 A82-27615

ECOSYSTEMS
Remote sensing of the structure of taiga landscapes --- Russian book
p0059 A82-27397

EDGES
A procedure for the interactive tracing of edges and lines by means of digital image processing
p0113 A82-26050

An automatic optimum kernel-size selection technique for edge enhancement
p0113 A82-26840

EDITING
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046]
p0119 N82-19621

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154]
p0123 N82-21678

EDUCATION
Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024]
p0091 N82-16442

ELECTRIC POWER PLANTS
Remote sensing of sulfur dioxide effects on vegetation Volume 2 Data
[PB82-115130]
p0066 N82-19716

ELECTRO-OPTICAL PHOTOGRAPHY
Spectritek - A multispectral electron-optic pushbroom camera
p0129 A82-27633

ELECTRO-OPTICS
Digital photography techniques
p0112 A82-21398

ELECTROMAGNETIC ABSORPTION
On randomly absorbing and scattering surface layers
p0079 A82-21037

ELECTROMAGNETIC MEASUREMENT
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10043]
p0084 N82-19618

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10044]
p0085 N82-19619

ELECTROMAGNETISM
Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10155]
p0087 N82-21679

ELEVATION
Experiences with digital terrain elevation data contouring programs
[AD-A110280]
p0087 N82-21690

EMISSIVITY
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154]
p0123 N82-21678

END-TO-END DATA SYSTEMS
Data rate reduction Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130]
p0120 N82-19654

ENERGY BUDGETS
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161]
p0080 N82-21685

ENVIRONMENT MODELS
Watershed model study using LANDSAT data
p0106 N82-17602

ENVIRONMENT POLLUTION
Evaluation of snow-cover pollution in industrial regions using satellite TV images
p0103 A82-27464

ENVIRONMENTAL MONITORING
Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis
p0073 A82-19179

The Canadian north - Utility of remote sensing for environmental monitoring
p0074 A82-24962

Detection of natural disasters via Meteosat
p0075 A82-27040

Present and future studies of natural resources and the environment from space
p0138 A82-27506

Development of cooperation between CMEA member countries in the development and utilization of space-based systems for the remote sensing of earth resources and the environment
p0138 A82-27543

Topographic mapping using Landsat data
p0082 A82-27615

Forest change detection
p0061 A82-27644

Monitoring forest land cover alteration in Thailand with the analysis of ancillary and digital Landsat data
p0062 A82-27673

Environmental studies by multispectral scanner under large-scale civil engineering construction
p0063 A82-27691

Remote SO2 emission measurements with correlation spectrometers from volcanoes
p0077 A82-27704

Polarimetric method for the remote sensing of oil slicks on the sea surface
p0095 A82-28135

Instruments watch for impending earthquakes
p0131 A82-28342

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021]
p0106 N82-16439

Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812]
p0096 N82-17563

Publications and reports on contracts and grants, 1980
[PB82-103219]
p0138 N82-17792

Imaging microwave radiometer Phase A study Volume 1 Executive summary --- instrument for the European Remote Sensing system payload
[ESS/SS-1006]
p0132 N82-18564

Measurement of river sediments
[WMO-561]
p0107 N82-18670

A microcomputer for control of data collection platforms --- GOES satellites
[INPE-2104-RPE/331]
p0133 N82-18881

General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026]
p0078 N82-19256

Resourceful decisions LANDAT in Michigan
[E82-10037]
p0078 N82-19601

The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065]
p0078 N82-20588

Applications systems verification and transfer project Volume 1 Operational applications of satellite snow cover observations Executive summary --- usefulness of satellite snow-cover data for water yield prediction
[NASA-TP-1822]
p0108 N82-20617

Applications systems verification and transfer project Volume 2 Operational applications of satellite snow-cover observations and data-collection systems in the Arizona test site
[NASA-TP-1823]
p0108 N82-20618

Optimal network density for atmospheric recording
p0079 N82-20776

Sounding the aerosol distribution over the Upper Rhine Valley in the Valley in the Speyer area by means of lidar
p0079 N82-20782

Remote sensing for water resources and hydrology An assessment of the Corps of Engineers' program
[PB82-137142]
p0110 N82-21704

ENVIRONMENTAL QUALITY
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029]
p0063 N82-16447

EROSION
Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images
p0076 A82-27680

ERROR ANALYSIS
Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis
p0073 A82-19179

Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns
p0112 A82-21040

Modeling misregistration and related effects on multispectral classification
p0113 A82-25455

Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448]
p0096 N82-17803

Some criteria for the accuracy and the reliability of networks --- in geodesy
p0086 N82-20580

Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota, and Oklahoma
[E82-10111]
p0069 N82-21651

ERROR CORRECTING DEVICES
The use of contextual information to improve land cover classification of digital remotely sensed data
p0112 A82-21094

ERS-1 (ESA SATELLITE)
The first ESA remote sensing satellite system ERS-1
p0094 A82-27608

Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905]
p0120 N82-19649

Satellite scatterometer feasibility study Volume 1 Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1]
p0133 N82-19650

Satellite scatterometer feasibility study Volume 2 Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2]
p0133 N82-19651

Study of a radar altimeter for the European remote sensing program Volume 1 Executive summary --- Earth Resources Satellite (ERS 1)
[SPAR-R-1090-ISSUE-A]
p0133 N82-19652

Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1
[FOK-RV-R-81-064]
p0134 N82-19653

ESTIMATING

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634

Development of rotation sample designs for the estimation of crop acreages
[E82-10117] p0070 N82-21654

ESTUARIES

The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] p0096 N82-17798

Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia
[E82-10064] p0108 N82-20587

EUROPE

Structural analysis of the basement of the East European platform by remote sensing methods p0089 A82-20342

Examination of the operational prospects for remote sensing --- in Europe
[ESA-CR(P)-1476] p0138 N82-18669

EVAPORATION RATE

HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586

EVAPOTRANSPIRATION

A gradient model of vegetation and climate utilizing NOAA satellite imagery. Phase 1: Texas transect
[E82-10107] p0069 N82-21648

Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

EVERGLADES (FL)

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

F

FARM CROPS

Experimental evaluation of methods of the automated interpretation of crops from a Fragment MSS image
p0057 A82-20349

Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026

Investigation of the vegetative covers on ploughed areas by SLAR p0058 A82-21031

Crop classification using airborne radar and Landsat data p0058 A82-21033

Data base requirements in support of crop models
p0060 A82-27588

Dew and vapor pressure as complicating factors in the interpretation of spectral radiance from crops
p0060 A82-27617

Automatic and semi-automatic classification of Landsat agricultural crops p0061 A82-27664

AgRISTARS: Yield model development/soil moisture interface control document
[E82-10054] p0065 N82-19629

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] p0066 N82-19715

Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] p0078 N82-19740

System of forecasting agricultural crops using satellite observations of Earth
[E82-10079] p0067 N82-20602

A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657

AgRISTARS: Supporting research. US crop calendars in support of the early warning project
[E82-10158] p0072 N82-21682

FARMLANDS

The influence of illumination and viewing geometry on the reflectance factor of agricultural targets
p0061 A82-27646

The potential of remote sensing to monitor soil erosion on cropland p0061 A82-27656

Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0131 A82-28130

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing
[E82-10056] p0065 N82-19631

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] p0065 N82-19633

Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] p0120 N82-19645

Elevation of a cane-growing area of the state of Sao Paulo using LANDSAT data
[E82-10077] p0067 N82-20600

FERTILIZERS

Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20591

FIELD OF VIEW

A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669

Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672

FINITE ELEMENT METHOD

Area determination by means of the method of finite elements p0082 A82-26048

FINLAND

Microwave radiation from a natural snow field
p0101 A82-19559

Theoretical and experimental studies of microwave emission signatures of snow p0125 A82-21034

FIRE PREVENTION

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

FISHERIES

Brazilian remote sensing activities, current and prospective needs
[E82-10026] p0132 N82-16444

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844

FLIGHT ALTITUDE

Analysis of the direction-dependent radiation behavior in multispectral scanning data p0125 A82-21399

FLOOD PLAINS

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

FLOOD PREDICTIONS

Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 A82-19177

Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs
p0102 A82-27462

Flash flood forecasting --- and damage control measures
[WMO-577] p0107 N82-18671

Remote sensing for water resources and hydrology: An assessment of the Corps of Engineers' program
[PB82-137142] p0110 N82-21704

FLORIDA

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] p0064 N82-19615

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida
[NASA-CR-166827] p0121 N82-20607

A satellite frost forecasting system for Florida
p0079 N82-20615

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

FLUOROCARBONS

Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] p0081 N82-16613

FOLIAGE

Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] p0078 N82-19740

FOOTPRINTS

Ground registration of data from an airborne scatterometer
[E82-10084] p0068 N82-21636

FORECASTING

System of forecasting agricultural crops using satellite observations of Earth
[E82-10079] p0067 N82-20602

FOREST FIRE DETECTION

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

Development of a Canadian thermal infrared forest fire mapping operational program p0063 A82-27699

FOREST FIRES

Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065] p0078 N82-20588

FOREST MANAGEMENT

Automation of the processing of aerial and space images for forest inventory p0057 A82-20350

Multiresource inventory methods pilot test --- for forests p0060 A82-27601

Application of space remote sensing data in forestry
p0063 A82-28131

Examination of the operational prospects for remote sensing --- in Europe
[ESA-CR(P)-1476] p0138 N82-18669

Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] p0066 N82-19640

Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979 --- Mato Grosso do Sul, Brazil
[E82-10078] p0067 N82-20601

FORESTS

Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397

Forest change detection p0061 A82-27644

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission
p0115 A82-27655

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

Fanning - A classification algorithm for mixture landscapes applied to Landsat data of Maine forests
p0062 A82-27668

Monitoring forest land cover alteration in Thailand with the analysis of ancillary and digital Landsat data
p0062 A82-27673

An invertible coniferous forest canopy reflectance model p0062 A82-27679

Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution
p0063 A82-27687

Environmental studies by multispectral scanner under large-scale civil engineering construction
p0063 A82-27691

Utilisation of remote sensing in resources identification and land use in India - An integrated approach
p0076 A82-27701

Application of space remote sensing data in forestry
p0063 A82-28131

Brazilian remote sensing activities, current and prospective needs
[E82-10026] p0132 N82-16444

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] p0120 N82-19645

San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition
[E82-10108] p0069 N82-21649

An evaluation of ISOCLS and CLASSY clustering algorithms for forest classification in northern Idaho --- Elk River quadrange of the Clearwater National Forest
[E82-10109] p0069 N82-21650

FRENCH SPACE PROGRAMS

Earth sensing from space - Commercial and international aspects p0138 A82-27669

FREQUENCY ASSIGNMENT

Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] p0133 N82-19647

FRESH WATER

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601

FRONTS (METEOROLOGY)

Structure and variability of the Alboran Sea frontal system p0093 A82-20447

FROST

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida
[NASA-CR-166827] p0121 N82-20607

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction
p0121 N82-20608

Freeze prediction model --- Pennsylvania
p0067 N82-20609

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

MSU test of P-model p0121 N82-20614

A satellite frost forecasting system for Florida
p0079 N82-20615

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

G

GARP ATLANTIC TROPICAL EXPERIMENT

Assessment of the quality of GATE area rainfall data from a Nimbus-5 radiometer [NASA-CR-168512] p0109 N82-20807

GAS DETECTORS

Ozone measurements to 48Km with chemiluminescent ozone detectors [AD-A110342] p0134 N82-21808

GAS POCKETS

Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/ p0076 A82-27661

GEOCHEMISTRY

Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634

GEODESY

Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project [NASA-CR-168427] p0083 N82-17708

Some criteria for the accuracy and the reliability of networks --- in geodesy p0086 N82-20580

Experiments in satellite Doppler control positioning at sea p0086 N82-20581

Recent results of geoid determination by combination techniques in the North Sea test area p0086 N82-20583

GEODETIC COORDINATES

Analytic methods of geodetic referencing of nontopographic images p0083 A82-28134

Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work p0084 N82-19605

The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories [SER-B-253-MITT-159-PT-2] p0085 N82-19648

Some criteria for the accuracy and the reliability of networks --- in geodesy p0086 N82-20580

Experiments in satellite Doppler control positioning at sea p0086 N82-20581

GEODETIC SURVEYS

Photogrammetry software: A package for everyone [AD-A108098] p0118 N82-17570

Helmut Wolf: On the occasion of his 70th birthday [SER-E-18] p0084 N82-19603

Developments in geodesy within the scope of Helmut Wolf's work p0084 N82-19604

Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work p0084 N82-19605

The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories [SER-B-253-MITT-159-PT-2] p0085 N82-19648

Applications to Earth physics: Very-long-baseline interferometry and data analysis [NASA-CR-168743] p0088 N82-21796

GEODYNAMICS

Developments in geodesy within the scope of Helmut Wolf's work p0084 N82-19604

GEOGRAPHY

The role of computer graphics in geographic research p0117 A82-27923

The atlas 'Geographical Results of Spaceborne Multispectral Experiments' p0077 A82-28133

GEOIDS

Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly [NASA-CR-168639] p0085 N82-19732

Recent results of geoid determination by combination techniques in the North Sea test area p0086 N82-20583

GEOLOGICAL FAULTS

Instruments watch for impending earthquakes p0131 A82-28342

GEOLOGICAL SURVEYS

Structural analysis of the basement of the East European platform by remote sensing methods p0089 A82-20342

Remote sensing for natural resources: An international view of problems, promises and accomplishments --- Book p0137 A82-21875

Dip determinations in photogeology p0089 A82-25453

Development of cooperation between CMEA member countries in the development and utilization of space-based systems for the remote sensing of earth resources and the environment p0138 A82-27543

Automatic linear recognition and analysis using computer program LIRA --- satellite imagery for earth observations p0090 A82-27612

Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale p0090 A82-27672

Airborne remote sensing in east Greenland p0090 A82-27695

Ring structures in the earth's crust, and their significance for geology and methods for their investigation p0091 A82-28136

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee [NASA-TM-82163] p0084 N82-17715

Resourceful decisions: LANDAT in Michigan [E82-10037] p0078 N82-19601

Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10049] p0091 N82-19624

Amazonas project: Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil [E82-10069] p0078 N82-20592

Study project of intrusive rocks: States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil [E82-10076] p0092 N82-20599

HCMM: Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau [E82-10135] p0092 N82-21662

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10137] p0092 N82-21664

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10152] p0092 N82-21677

GEOLOGY

Visual and digital analysis of H.C.M.M. data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

GEOMAGNETIC MICROPULSATIONS

Harmonic structure of Pc 3-4 pulsations p0082 A82-26266

GEOMAGNETISM

Ideal phase in estimating the spatial gradient of magnetic daily variations recorded by magnetometer arrays p0127 A82-26000

Harmonic structure of Pc 3-4 pulsations p0082 A82-26266

Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments [INPE-2119-RPE/343] p0083 N82-17711

Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch [NASA-TM-83868] p0083 N82-17714

Equivalent source modeling of the main field using Magsat data [E82-10041] p0084 N82-19616

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10043] p0084 N82-19618

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10044] p0085 N82-19619

Magsat science investigations [E82-10045] p0085 N82-19620

Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data [E82-10047] p0119 N82-19622

Studies related to Magsat --- Backus effect and the westward drift [E82-10050] p0085 N82-19625

Improved definition of crustal anomalies for Magsat data [E82-10051] p0085 N82-19626

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10062] p0086 N82-20585

MAGSAT anomaly profiles of the eastern Indian Ocean [E82-10066] p0086 N82-20589

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics [E82-10075] p0086 N82-20598

Preliminary models of the core field --- geomagnetic models [E82-10129] p0087 N82-21659

Compatibility study of the MAGSAT data and aeromagnetic data [E82-10136] p0123 N82-21663

Continuation of potential field data to a common altitude --- magsat data [E82-10138] p0123 N82-21665

Separation of internal and external fields: A new technique of data screening --- MAGSAT data [E82-10139] p0123 N82-21666

Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10147] p0087 N82-21674

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes [E82-10148] p0087 N82-21675

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10152] p0092 N82-21677

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites: Constraints on the regional emplacement of crustal resources [E82-10155] p0087 N82-21679

Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10162] p0087 N82-21686

GEOMETRIC RECTIFICATION (IMAGERY)

Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470

Operational resampling for correcting images to a geocoded format --- in remote sensing p0114 A82-27590

The use of digital terrain model in the rectification of satellite-borne imagery p0115 A82-27626

Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application p0129 A82-27649

Field-by-field multitemporal analysis of aerial scanner data geometrically corrected by means of a sliding model p0115 A82-27651

Geometric correction of airborne multispectral scanner images p0130 A82-27706

Automatic relocation of ground control points in LANDSAT imagery [RAE-TR-81071] p0118 N82-18657

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

An introduction to image processing at Royal Aircraft Establishment, Farnborough, England --- U.S. and European satellite imagery [RAE-TR-80107] p0122 N82-21565

GEOMORPHOLOGY

Analysis of space imagery to compile a geomorphological map of the world p0089 A82-20338

Structural analysis of the basement of the East European platform by remote sensing methods p0089 A82-20342

A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/ p0089 A82-26014

Area determination by means of the method of finite elements p0082 A82-26048

Satellite sensing for extraction of groundwater resources information p0105 A82-27613

Methodology of the interpretation of remote sensing data and applications in geomorphology [INPE-2209-MD/007] p0091 N82-19642

Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei [E82-10073] p0091 N82-20596

GEOPHYSICS

Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10162] p0087 N82-21686

Applications to Earth physics: Very-long-baseline interferometry and data analysis [NASA-CR-168743] p0088 N82-21796

GEOTECHNICAL ENGINEERING

Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838

GEOTEMPERATURE

Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627

GEOTHERMAL RESOURCES

Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635

Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0117 A82-27693

GERMANY

The use of the airborne lidar system 'ALEX F 1' for aerosol tracing in the lower troposphere p0073 A82-20226

Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data p0127 A82-26049

GLACIAL DRIFT

Use of Landsat imagery to delineate glaciofluvial aquifers in southeast South Dakota p0105 A82-27637

GOES SATELLITES

Weather satellite interpretation: Introduction to weather satellite imagery [PB82-107657] p0118 N82-16677

GOVERNMENT PROCUREMENT

Remote sensing procurement package: A management report for state and local governments [E82-10052] p0138 N82-19627

GOVERNMENT/INDUSTRY RELATIONS

Earth sensing from space - Commercial and international aspects p0138 A82-27669

GRAINS (FOOD)

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data [E82-10030] p0063 N82-16449

AgRISTARS: Foreign commodity production forecasting. Project test reports document, volume 1 --- using North Dakota, South Dakota, Montana, and Minnesota [E82-10087] p0068 N82-21639

GRAND CANYON (AZ)

Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image p0082 A82-26843

GRASSES

Assessing mesquite-grass vegetation condition from Landsat p0059 A82-25457

GRASSHOPPERS

Remote sensing applications to resource problems in South Dakota [E82-10027] p0132 N82-16445

GRASSLANDS
Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422
Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] p0120 N82-19645

GRAVIMETRY
Developments in geodesy within the scope of Helmut Wolf's work p0084 N82-19604

GRAVITATION
Ore deposits in Africa and their relation to the underlying mantle p0090 A82-26604

GRAVITATIONAL FIELDS
Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] p0085 N82-19731

GRAVITY ANOMALIES
Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] p0084 N82-17715
Gravity and geoid anomalies of the Philippine Sea. Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] p0085 N82-19732
Recent results of geoid determination by combination techniques in the North Sea test area p0086 N82-20583
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10062] p0086 N82-20585
Gradio: Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

GRAVITY GRADIOMETERS
Superconducting tensor gravity gradiometer p0126 A82-23045
Gradio: Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

GRAVITY WAVES
The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675

GREAT LAKES (NORTH AMERICA)
HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission p0115 A82-27655

GREAT PLAINS CORRIDOR (NORTH AMERICA)
Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota, and Oklahoma
[E82-10111] p0069 N82-21651
AgRISTARS: Supporting research. US crop calendars in support of the early warning project
[E82-10158] p0072 N82-21682

GREEN WAVE EFFECT
As-built design specification for PARHIS
[E82-10089] p0122 N82-21641

GREENLAND
Airborne remote sensing in east Greenland p0090 A82-27695

GROUND STATIONS
University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659
A low cost NOAA/TIROS AVHRR receiving station --- Advanced Very High Resolution Radiometer p0130 A82-27681
CNPq/INPE: LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] p0118 N82-16441

GROUND TRUTH
Crop area estimates using ground-gathered and Landsat data A multitemporal approach p0062 A82-27676
An autodigitizing procedure for ground-data labelling of Landsat pixels p0062 A82-27682
AgRISTARS: Interim catalog ground data summary, data acquisition year 1979
[E82-10032] p0064 N82-19608
Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] p0064 N82-19610
Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632
Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634
Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635
As-built design specification for PARHIS
[E82-10089] p0122 N82-21641
As-built design specification for MISMAP
[E82-10091] p0123 N82-21643
AgRISTARS: Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing. Enumerator's manual, 1981 ground data survey
[E82-10116] p0069 N82-21653
The 1981 Argentina ground data collection
[E82-10127] p0070 N82-21658
A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri
[E82-10140] p0079 N82-21667
A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669

GROUND WATER
Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343
Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030
Remote-sensing functions in the interpretation of moisture from aerial and space images p0102 A82-27459
Application of aerial and space photographic data in the study of subsurface water and tectonic structures p0090 A82-27466
Satellite sensing for extraction of groundwater resources information p0105 A82-27613
Environmental studies by multispectral scanner under large-scale civil engineering construction p0063 A82-27691
HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586

H

HABITATS
Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397
Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution p0063 A82-27687
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19609
San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition
[E82-10106] p0069 N82-21649

HANDBOOKS
Applications systems verification and transfer project. Volume 8: Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624

HEAT CAPACITY MAPPING MISSION
A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683

HEAT FLUX
Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] p0120 N82-19623
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] p0097 N82-19781
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

HEAT ISLANDS
A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri
[E82-10140] p0079 N82-21667
A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683
A study of model parameters associated with the urban climate using HCMM data --- analysis of St. Louis, Missouri infrared imagery
[E82-10160] p0080 N82-21684
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

HIGHWAYS
Amazonas project: Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil
[E82-10069] p0078 N82-20592

HUMIDITY MEASUREMENT
Humidity measurement by infrared thermometry p0075 A82-26844

HUNGARY
Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460
Monitoring of the thermal pollution of natural channels of water using infrared aerial photography p0104 A82-27471
Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472

HYDROGEOLOGY
Microwave radiometry of lands under natural and artificial moistening p0057 A82-21028
Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030
Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838
Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460
Application of aerial and space photographic data in the study of subsurface water and tectonic structures p0090 A82-27466
The use of space photographs for hydrogeological studies of the Baikal region and Mongolia p0103 A82-27468
Satellite sensing for extraction of groundwater resources information p0105 A82-27613
Use of Landsat imagery to delineate glaciofluvial aquifers in southeast South Dakota p0105 A82-27637
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery p0131 A82-28130

HYDROGRAPHY
The Pampean Plain studied with Landsat images p0089 A82-26013
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473
Spectrometric studies of the water composition of Lake Mueggelsee p0104 A82-27474
Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale p0090 A82-27672
Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677
Mapping of water quality using Landsat imagery p0106 A82-27692
The use of space photographs to compile water-amelioration maps p0106 A82-28137
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] p0096 N82-17803
Proposed digital cartridge recording system for WRELADS --- laser airborne depth sounder
[AD-A109484] p0134 N82-20491

HYDROLOGY
Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343
The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458
Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs p0102 A82-27462
Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs p0103 A82-27467
Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470
Noncontact methods for the quality control of water resources p0104 A82-27475
Analog devices for the processing of aerial and space images for the study of water resources p0104 A82-27476
Snow cover monitoring using AVHRR data from TIROS and NOAA satellites --- Advanced Very High Resolution Radiometer p0105 A82-27614
Visual and digital analysis of H.C.M.M. data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698
Measurement of river sediments
[WMO-561] p0107 N82-18670
Data collection platforms: Applications to hydrology
[INPE-2246-PRE/030] p0107 N82-19304
Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632
HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations: Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620
Applications systems verification and transfer project. Volume 5: Operational applications of satellite snow-cover observations, northwest United States
[NASA-TP-1826] p0109 N82-20621
Applications systems verification and transfer project. Volume 6: Operational applications of satellite snow-cover observations NOAA/NESS support study
[NASA-TP-1827] p0109 N82-20622

Applications systems verification and transfer project. Volume 8 Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624

Remote sensing for water resources and hydrology An assessment of the Corps of Engineers' program
[PB82-137142] p0110 N82-21704

HYDROLOGY MODELS

Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472

Watershed model study using LANDSAT data p0106 N82-17602

Strategies for using remotely sensed data in hydrologic models
[E82-10158] p0109 N82-21680

HYDROMETEOROLOGY

The use of satellite data in rainfall monitoring --- Book p0101 A82-22873

The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463

Publications and reports on contracts and grants, 1980
[PB82-103219] p0138 N82-17792

Flash flood forecasting --- and damage control measures
[WMO-577] p0107 N82-18671

Development and applications of techniques to process hydrometeor distribution data
[AD-A109929] p0109 N82-20822

I

ICE

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601

ICE MAPPING

Classification of ice radar imagery p0113 A82-22891

The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458

Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460

Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665

The use of data from satellite-borne microwave scanning radiometers for the automated compilation of operational maps of ice cover for the Arctic Ocean p0095 A82-28145

Satellite-derived ice data sets no. 1 Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] p0096 N82-17563

Electromagnetic subsurface measurements
[AD-A108192] p0106 N82-18469

Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] p0107 N82-18664

Sea ice movements from synthetic aperture radar
[AD-A109002] p0097 N82-19435

ICE REPORTING

Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619

IDAHO

Multiresource inventory methods pilot test --- for forests p0060 A82-27601

An evaluation of ISOCLS and CLASSY clustering algorithms for forest classification in northern Idaho --- Elk River quadrange of the Clearwater National Forest
[E82-10109] p0069 N82-21650

ILLINOIS

An investigation of the ozone plume from a small city p0074 A82-26329

ILLUMINATION

The influence of illumination and viewing geometry on the reflectance factor of agricultural targets p0061 A82-27646

IMAGE CONTRAST

Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance p0112 A82-20423

IMAGE CORRELATORS

Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] p0118 N82-18657

IMAGE ENHANCEMENT

Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838

An automatic optimum kernel-size selection technique for edge enhancement p0113 A82-26840

Landsat feature enhancement - Or, can we separate vegetation from soil p0060 A82-27622

Enhancement of Landsat data for Hudson Bay lowlands vegetation p0114 A82-27623

IMAGE FILTERS

Increase in correlation accuracy of remote sensing imagery by digital filtering p0113 A82-25454

IMAGE PROCESSING

Optimal methods of computerized image conversion p0111 A82-19833

Experimental evaluation of methods of the automated interpretation of crops from a Fragment MSS image p0057 A82-20349

Automation of the processing of aerial and space images for forest inventory p0057 A82-20350

The accuracy potential of the modern bundle block adjustment in aerial photogrammetry p0111 A82-20401

Exterior algebraic processing for remotely sensed multispectral and multitemporal images p0112 A82-21041

Information extraction from remotely sensed data - A user view p0112 A82-21089

The use of contextual information to improve land cover classification of digital remotely sensed data p0112 A82-21094

Registration of heat capacity mapping mission day and night images p0113 A82-22146

Spaceborne photography for the study of earth resources --- Russian book p0126 A82-22397

Classification of ice radar imagery p0113 A82-22891

Multispectral texture p0113 A82-25139

Building and road extraction from aerial photographs p0074 A82-25140

Increase in correlation accuracy of remote sensing imagery by digital filtering p0113 A82-25454

A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050

Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470

Analog devices for the processing of aerial and space images for the study of water resources p0104 A82-27476

Operational resampling for correcting images to a geocoded format --- in remote sensing p0114 A82-27590

Topographic mapping using Landsat data p0082 A82-27615

Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application p0129 A82-27649

Field-by-field multitemporal analysis of aerial scanner data geometrically corrected by means of a sliding model p0115 A82-27651

Evaluation of large area crop estimation techniques p0061 A82-27662

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

Phenomena modelling of remotely sensed data by image rationing p0076 A82-27670

Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677

Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution p0063 A82-27687

Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0117 A82-27693

Visual and digital analysis of H.C.M.M. data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

Structure of hardware and software at a regional center for the automated processing of aerial and space remote-sensing images p0130 A82-28128

Possibilities of using experience gained from the thematic mapping of the moon in studies of earth resources by remote sensing methods p0083 A82-28138

Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography p0117 A82-28143

Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications
[E82-10020] p0118 N82-16438

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] p0106 N82-16439

CNPq/INPE LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] p0118 N82-16441

Simplified algorithm for calculating radiative transfer in satellite images
[INPE-2169-RPE/385] p0118 N82-16450

Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] p0132 N82-18466

Matrix data analysis Color/B and W coding is not always enough
[AD-A108406] p0084 N82-18930

Automatic analysis of multispectral images
[INPE-2212-MD/009] p0133 N82-19520

LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] p0119 N82-19613

Delineation of soil temperature regimes from HCMM data
[E82-10042] p0119 N82-19617

AgRISTARS Early warning and crop condition assessment Patch image processor user's manual
[E82-10055] p0065 N82-19630

Data rate reduction Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] p0120 N82-19654

Selection of attributes applied to multispectral images
[INPE-2303-TDL/072] p0121 N82-19927

Study project of intrusive rocks States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil
[E82-10076] p0092 N82-20599

An algorithm for spatial heirarchy clustering
[E82-10081] p0121 N82-20604

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

Satellite-borne non-DOD sensors for terrestrial observations
[AD-A109486] p0134 N82-20630

Direct determination of the two dimensional image spectrum from raw synthetic aperture radar data p0122 N82-21474

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

An introduction to image processing at Royal Aircraft Establishment, Farnborough, England --- U.S. and European satellite imagery
[RAE-TR-80107] p0122 N82-21565

Sonora exploratory study for the detection of wheat-leaf rust
[E82-10133] p0070 N82-21661

Observation of the Earth by radar
[NASA-TM-76830] p0124 N82-21687

Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

Interpretation of remotely sensed image data and impact of cluster compression --- impact of cluster compression, users
[REPT-44.2866] p0124 N82-21699

IMAGE RECONSTRUCTION

Reconstruction of a present-day landscape map of a central part of Italy using space images p0081 A82-20340

Calibration and model reconstruction in analytical close-range stereophotogrammetry I - Mathematical fundamentals p0111 A82-20403

Calibration and model reconstruction in analytical close-range stereophotogrammetry II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

IMAGE RESOLUTION

Image quality control in the Meteosat ground processing system p0125 A82-21090

The Landsat program - Moving ahead p0137 A82-21280

A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143

An evaluation of the utility of smaller Landsat resolution elements /Resolution of Landsat resolution/ p0114 A82-27625

Improving the quality of aerial photography /Concerning the 'Basic principles of aerial photography'/ p0117 A82-28467

Profiling sensitivity to image quality
[AD-A108405] p0084 N82-18931

The LANDSAT system operated in Brazil by CNPq/INPE - results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

SAR image quality --- conference, Frascati, Italy, 11-12 Dec. 1980, synthetic aperture radar (SAR)
[ESA-SP-172] p0122 N82-21458

Two-dimensional power spectra of SEASAT SAR imagery --- ocean waves p0098 N82-21469

IMAGING TECHNIQUES

Digital photography techniques p0112 A82-21398

The use of satellite data in rainfall monitoring --- Book p0101 A82-22873

Detection of natural disasters via Meteosat p0075 A82-27040

The earth resources program for the long-term orbital station Salyut 6 p0131 A82-28132

Earth-scanning satellites lead resource hunt p0117 A82-28343

Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

INCIDENCE

Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153

INDEXES (RATIOS)

A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657

INDIA

Microwave brightness temperature pattern over the Indian subcontinent and the surrounding oceans as observed by the satellite microwave radiometer /SAMIR/ onboard Bhaskara p0093 A82-19560

Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016

One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India
p0089 A82-26017

Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838

Satellite sensing for extraction of groundwater resources information p0106 A82-27613

Utilisation of remote sensing in resources identification and land use in India - An integrated approach
p0076 A82-27701

INDIAN OCEAN

Microwave brightness temperature pattern over the Indian subcontinent and the surrounding oceans as observed by the satellite microwave radiometer /SAMIR/ onboard Bhaskara p0093 A82-19560

The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] p0098 N82-19805

MAGSAT anomaly profiles of the eastern Indian Ocean
[E82-10066] p0086 N82-20589

INDIANA

Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0090 A82-27694

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] p0120 N82-19623

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana
[E82-10105] p0068 N82-21647

INDUSTRIAL AREAS

A regional air quality model for the Kwinana industrial area of Western Australia p0075 A82-26403

INFESTATION

Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612

INFORMATION ADAPTIVE SYSTEM

An information adaptive system study report and development plan
[NASA-CR-166768] p0120 N82-19644

INFORMATION DISSEMINATION

An analysis of user requirements for operational land satellite data p0116 A82-27685

CNPq/INPE LANDSAT system --- operations at the Cuiaba station and the electronic processing and photo laboratories
[E82-10023] p0118 N82-16441

AgRISTARS Soil moisture/early warning and crop condition assessment Interface control document
[E82-10053] p0065 N82-19628

Future Earthnet Dissemination Systems (FEDS) study Executive summary --- remote sensing data transmission
[REPT-3318] p0124 N82-21698

INFORMATION SYSTEMS

Information extraction from remotely sensed data - A user view p0112 A82-21089

Some problems concerning the effective use of remote sensing p0137 A82-26123

Program on stimulating operational private sector use of Earth observation satellite information
[E82-10131] p0138 N82-21660

INFRARED DETECTORS

Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653

INFRARED IMAGERY

Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 N82-19177

Thermal viewing system for studying the earth's resources p0125 A82-21022

Thermal infrared data from the Heat Capacity Mapping Mission p0127 A82-24964

High precision radiometric temperature measurements of the ocean surface p0094 A82-27640

HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission
p0115 A82-27655

Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0076 A82-27661

Arabian sea project of 1980 Composites of infrared images
[AD-A107910] p0096 N82-17567

On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] p0120 N82-19656

INFRARED PHOTOGRAPHY

The estimation of the surface moisture of a vegetated soil using aerial infrared photography p0058 A82-21093

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs
p0074 A82-24958

Remote sensing of sulfur dioxide effects on vegetation Volume 1 Summary
[PB82-115122] p0066 N82-19715

Remote sensing of sulfur dioxide effects on vegetation Volume 2: Data
[PB82-115130] p0066 N82-19716

INFRARED RADIATION

Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data
p0075 A82-26980

INFRARED RADIOMETERS

Snow cover monitoring using AVHRR data from TIROS and NOAA satellites --- Advanced Very High Resolution Radiometer p0105 A82-27614

Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627

Instrumentation for remote reflectance and radiance measurements p0130 A82-27652

INFRARED SCANNERS

Humidity measurement by infrared thermometry
p0075 A82-26844

INFRARED SPECTRA

Thermal vegetation canopy model studies
[AD-A106422] p0064 N82-16455

INFRARED SPECTROMETERS

Measurement of atmospheric emission using a balloon-borne cryogenic Fourier spectrometer
p0074 A82-21432

INFRARED SPECTROSCOPY

Recent auroral measurements using a field-widened interferometer spectrometer p0126 A82-21434

INLAND WATERS

Inland water quality assessment from Landsat data
p0105 A82-27610

INSOLATION

Development of a surface isolation estimation technique suitable for application of polar orbiting satellite data
[E82-10122] p0123 N82-21656

INSTRUMENT ERRORS

Radiometric calibration of the Coastal Zone Color Scanner on Nimbus 7 - A proposed adjustment
p0127 A82-26963

INTERFEROMETERS

Recent auroral measurements using a field-widened interferometer spectrometer p0126 A82-21434

INTERNATIONAL COOPERATION

Development of cooperation between CMEA member countries in the development and utilization of space-based systems for the remote sensing of earth resources and the environment p0138 A82-27543

INTERNATIONAL LAW

Remote sensing and international law
p0137 A82-24343

IONOSPHERIC CURRENTS

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10043] p0084 N82-19618

IONOSPHERIC PROPAGATION

Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17805

IONOSPHERIC SOUNDING

Ionospheric troughs in Antarctica p0073 A82-21217

IOWA

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590

Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

IRAN

The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341

IRAQ

The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341

IRELAND

Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery p0089 A82-26015

IRON ORES

One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India
p0089 A82-26017

IRRIGATION

Microwave radiometry of lands under natural and artificial moistening p0057 A82-21028

The use of space photographs to compile water-amelioration maps p0106 A82-28137

ISOTHERMS

The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] p0098 N82-19805

ITALY

The use of the airborne lidar system 'ALEX F 1' for aerosol tracing in the lower troposphere p0073 A82-20226

Reconstruction of a present-day landscape map of a central part of Italy using space images
p0081 A82-20340

Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale
p0090 A82-27672

LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] p0119 N82-19613

Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei
[E82-10073] p0091 N82-20596

J

JAPAN

An approach to path radiance correction in MSS images p0115 A82-27629

Detection of volcanic ash fall area from Landsat MSS CCT data Eruption of Mt. Ontake in 1979
p0076 A82-27650

Phenomena modelling of remotely sensed data by image rationing p0076 A82-27670

A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674

JAPANESE SPACE PROGRAM

The Japanese MOS and Los program --- Marine Observation Satellite p0129 A82-27606

Earth sensing from space - Commercial and international aspects p0138 A82-27669

K

KANSAS

Crop classification using airborne radar and Landsat data p0058 A82-21033

Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping
p0129 A82-27648

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] p0120 N82-19623

Agricultural soil moisture experiment, Colby, Kansas 1978 Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

Ground registration of data from an airborne scatterometer
[E82-10084] p0068 N82-21636

KARST

Application of aerial and space photographic data in the study of subsurface water and tectonic structures
p0090 A82-27466

KENTUCKY

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-8[illegible]163] p0084 N82-17715

KUWAIT

An experiment in probabilistic relaxation for terrain cover classification of Kuwait from Landsat imagery
p0062 A82-27680

L

LAGOONS

LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612

LAKE ICE

Ground-truth observations of ice-covered North Slope Lakes imaged by radar
[NASA-TM-84127] p0107 N82-18664

LAKE MICHIGAN

The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675

LAKE ONTARIO

Visual and digital analysis of H.C.M.M. data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

LAKES

Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838

Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397

The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469

Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472

Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473

Spectrometric studies of the water composition of Lake Mueggelsee p0104 A82-27474

Inland water quality assessment from Landsat data p0105 A82-27610

Mapping of water quality using Landsat imagery p0106 A82-27692

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin [E82-10021] p0106 N82-16439

Ground-truth observations of ice-covered North Slope Lakes imaged by radar [NASA-TM-84127] p0107 N82-18664

Resourceful decisions LANDAT in Michigan [E82-10037] p0078 N82-19601

HCMM hydrological analysis in Utah --- Utah lake [E82-10063] p0107 N82-20586

LAND MANAGEMENT

Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images p0076 A82-27690

Assessment of change in Bangladesh coastal regions p0076 A82-27696

Landsat MSS applied to rangeland management in Western Canada p0063 A82-27697

Seasat imagery for detection of coastal Wetlands p0063 A82-27700

Examination of the operational prospects for remote sensing --- in Europe [ESA-CR(P)-1476] p0138 N82-18669

San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition [E82-10108] p0069 N82-21649

LAND USE

A comparison between aerial photography and Landsat for computer land cover mapping p0074 A82-22143

Detailed land use classification based on multitemporal Landsat-MSS-data p0076 A82-27657

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

Visual and digital analysis of H C M M data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

Utilization of remote sensing in resources identification and land use in India - An integrated approach p0076 A82-27701

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil [E82-10025] p0081 N82-16443

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] p0063 N82-16447

Resourceful decisions LANDAT in Michigan [E82-10037] p0078 N82-19601

Application of remote sensing to state and regional problems --- mississippi [E82-10033] p0078 N82-19609

Notes for Brazil sampling frame evaluation trip [E82-10060] p0066 N82-19635

Amazonas project Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil [E82-10069] p0078 N82-20592

Land use in the Paraiba Valley through remotely sensed data --- Brazil [E82-10072] p0079 N82-20595

AgRISTARS Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing Enumerator's manual, 1981 ground data survey [E82-10116] p0069 N82-21653

Strategies for using remotely sensed data in hydrologic models [E82-10156] p0109 N82-21680

LANDFORMS

Methods of editing cloud and atmospheric layer affected pixels from satellite data [E82-10154] p0123 N82-21678

LANDSAT D

Imaging the earth. I - The troubled first decade of Landsat p0137 A82-27169

Information expectations from Landsat-D p0128 A82-27583

Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

The potential of remote sensing to monitor soil erosion on cropland p0061 A82-27656

Earth sensing from space - Commercial and international aspects p0138 A82-27669

An analysis of user requirements for operational land satellite data p0116 A82-27685

LANDSAT D PRIME

Earth sensing from space - Commercial and international aspects p0138 A82-27669

An analysis of user requirements for operational land satellite data p0116 A82-27685

LANDSAT SATELLITES

Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data p0125 A82-21091

The Landsat program - Moving ahead p0137 A82-21280

LANDSAT 2

LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980 [E82-10022] p0132 N82-16440

LANDSAT 3

LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980 [E82-10022] p0132 N82-16440

LARGE AREA CROP INVENTORY EXPERIMENT

Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota, and Oklahoma [E82-10111] p0069 N82-21651

LARGE SPACE STRUCTURES

The microwave radiometer spacecraft. A design study. Executive summary p0131 N82-16154

LASER ALTIMETERS

Airborne laser systems use in terrain mapping p0082 A82-27584

A shuttle scanning laser altimeter for topographic mapping p0083 A82-27632

LASER APPLICATIONS

Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407

Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619

Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography p0117 A82-28143

Model studies of laser absorption computed tomography for remote air pollution measurement p0077 A82-28152

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast [AD-A109050] p0098 N82-19802

LASER RANGE FINDERS

Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project [NASA-CR-168427] p0083 N82-17708

LEAST SQUARES METHOD

The location of three-dimensional linear objects by using multiple projections p0111 A82-20404

LEAVES

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana [E82-10105] p0068 N82-21647

LIBYA

Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan [RSC-4] p0107 N82-19790

LIGHT SCATTERING

Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction [E82-10144] p0071 N82-21671

LIGNITE

Application of remote sensing to state and regional problems --- mississippi [E82-10033] p0078 N82-19609

LIMNOLOGY

The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469

Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634

LITHOLOGY

Heat Capacity Mapping Mission (HCMM) program Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei [E82-10073] p0091 N82-20596

HCMM Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau [E82-10135] p0092 N82-21662

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10152] p0092 N82-21677

LITHOSPHERE

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources [E82-10043] p0084 N82-19618

MAGSAT anomaly profiles of the eastern Indian Ocean [E82-10066] p0086 N82-20589

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources [E82-10155] p0087 N82-21679

LONG RANGE WEATHER FORECASTING

Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year [BLL-TRANS-1509-(9022.552)] p0097 N82-19756

M

MAGNETIC ANOMALIES

Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016

Harmonic structure of Pc 3-4 pulsations p0082 A82-26266

Particle precipitation and atmospheric X-and Gamma-rays in the South Atlantic magnetic anomaly by balloon experiments [INPE-2119-RPE/343] p0083 N82-17711

Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch [NASA-TM-83868] p0083 N82-17714

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee [NASA-TM-82163] p0084 N82-17715

Equivalent source modeling of the main field using Magsat data [E82-10041] p0084 N82-19616

Magsat science investigations [E82-10045] p0085 N82-19620

Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data [E82-10047] p0119 N82-19622

Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10049] p0091 N82-19624

Improved definition of crustal anomalies for Magsat data [E82-10051] p0085 N82-19626

MAGSAT anomaly profiles of the eastern Indian Ocean [E82-10066] p0086 N82-20589

Preliminary models of the core field --- geomagnetic models [E82-10129] p0087 N82-21659

Compatibility study of the MAGSAT data and aeromagnetic data [E82-10136] p0123 N82-21663

Continuation of potential field data to a common altitude --- magsat data [E82-10138] p0123 N82-21665

Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10147] p0087 N82-21674

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent [E82-10152] p0092 N82-21677

MAGNETIC DIPOLES

Equivalent source modeling of the main field using Magsat data [E82-10041] p0084 N82-19616

MAGNETIC INDUCTION

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources [E82-10044] p0085 N82-19619

MAGNETIC STORAGE

Partially processed multispectral scanner LANDSAT high-density tapes reformatting system (HDT-AM/AMC) design specifications [E82-10020] p0118 N82-16438

MAGNETIC STORMS

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes [E82-10148] p0087 N82-21675

MAGNETIC SURVEYS

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming [E82-10028] p0091 N82-16446

Improved definition of crustal anomalies for Magsat data [E82-10051] p0085 N82-19626

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10062] p0086 N82-20585

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics [E82-10075] p0086 N82-20598

Preliminary models of the core field -- geomagnetic models [E82-10129] p0087 N82-21659

Compatibility study of the MAGSAT data and aeromagnetic data [E82-10136] p0123 N82-21663

Continuation of potential field data to a common altitude --- magsat data [E82-10138] p0123 N82-21665

Separation of internal and external fields A new technique of data screening --- MAGSAT data [E82-10139] p0123 N82-21666

Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10147] p0087 N82-21674

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes [E82-10148] p0087 N82-21675

MAGNETIC VARIATIONS

Ideal phase in estimating the spatial gradient of magnetic daily variations recorded by magnetometer arrays p0127 A82-26000

Studies related to Magsat --- Backus effect and the westward drift [E82-10050] p0085 N82-19625

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources [E82-10155] p0087 N82-21679

MAGNETIZATION

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] p0084 N82-17715

MAINE

Fanning - A classification algorithm for mixture landscapes applied to Landsat data of Maine forests
p0082 A82-27668

MAN ENVIRONMENT INTERACTIONS

The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469

MAPPING

Reconstruction of a present-day landscape map of a central part of Italy using space images
p0081 A82-20340

Mapsat compared to other earth-sensing concepts
p0128 A82-27581

Airborne laser systems use in terrain mapping
p0082 A82-27584

Automatic linear recognition and analysis using computer program LIRA --- satellite imagery for earth observations
p0090 A82-27612

Topographic mapping using Landsat data
p0082 A82-27615

Wide area, coarse resolution imaging with satellite-borne synthetic aperture radars in low-earth and geosynchronous orbits p0082 A82-27631

The role of computer graphics in geographic research
p0117 A82-27923

Photogrammetry software A package for everyone
[AD-A108098] p0118 N82-17570

Matrix data analysis Color/B and W coding is not always enough
[AD-A108406] p0084 N82-18930

Profiling sensitivity to image quality
[AD-A108405] p0084 N82-18931

The LANDSAT system operated in Brazil by CNPq/INPE results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

Remote sensing in Latin America Technology and markets for the 1980's
[AD-A108784] p0138 N82-20626

As-built design specification for segment map (Sgmap) program
[E82-10094] p0123 N82-21646

Preliminary models of the core field - geomagnetic models
[E82-10129] p0087 N82-21659

A digital technique for constructing variable-width lines
[AD-A110287] p0087 N82-21689

Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TP-80110] p0087 N82-21697

MAPS

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] p0065 N82-19633

MARINE ENVIRONMENTS

Recent results of geoid determination by combination techniques in the North Sea test area p0086 N82-20583

MARINE METEOROLOGY

Analyses of the Eastern Pacific without ship PAPA data --- buoys, radar and satellite to replace weathership
p0093 A82-19139

Structure and variability of the Alboran Sea frontal system p0093 A82-20447

Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere p0093 A82-21921

Diurnal variation of summer convection over West Africa and the Tropical Eastern Atlantic during 1974 and 1978
p0075 A82-26700

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

Remote sensing of rainfall rates using airborne microwave rain-scatterometer/radiometer p0105 A82-27639

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697

Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] p0097 N82-19756

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] p0097 N82-19778

Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] p0097 N82-19781

MARINE RESOURCES

Brazilian remote sensing activities current and prospective needs
[E82-10026] p0132 N82-16444

Technology and oceanography An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844

Ship and satellite bio-optical research in the California Bight
[NASA-CR-168681] p0098 N82-20823

MARITIME SATELLITES

The Japanese MOS and Los program --- Marine Observation Satellite p0129 A82-27606

MARKET RESEARCH

Program on stimulating operational private sector use of Earth observation satellite information
[E82-10131] p0138 N82-21660

MARKING

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] p0063 N82-16448

MARSHLANDS

HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission
p0115 A82-27655

MASSIFS

Application of aerial and space photographic data in the study of subsurface water and tectonic structures
p0090 A82-27466

MATHEMATICAL MODELS

Stochastic models of cover class dynamics --- remote sensing of vegetation p0059 A82-27586

Data base requirements in support of crop models
p0060 A82-27588

Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627

The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675

An invertible coniferous forest canopy reflectance model p0062 A82-27679

Construction of a mathematical model for the recognition of identical images on a pair of photographs
p0117 A82-28146

An optical model for the microwave properties of sea ice
[NASA-TM-83865] p0095 N82-17561

Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work p0084 N82-19605

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] p0064 N82-19607

Equivalent source modeling of the main field using Magsat data
[E82-10041] p0084 N82-19616

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10075] p0086 N82-20598

Freeze prediction model --- Pennsylvania
p0067 N82-20609

MSU test of P-model p0121 N82-20614

A gradient model of vegetation and climate utilizing NOAA satellite imagery Phase 1 Texas transect
[E82-10107] p0069 N82-21648

MAXIMUM ENTROPY METHOD

Information theory lateral density distribution for Earth inferred from global gravity field
[NASA-TM-83825] p0085 N82-19731

MAXIMUM LIKELIHOOD ESTIMATES

Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns p0112 A82-21040

The logit classifier - A general maximum likelihood discriminant for remote sensing applications
p0128 A82-27591

MEDITERRANEAN SEA

The use of Meteor-satellite image data in oceanography p0093 A82-20344

Structure and variability of the Alboran Sea frontal system p0093 A82-20447

MELTING

The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463

MERCATOR PROJECTION

Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

MESOSCALE PHENOMENA

Arabian sea project of 1980 Composites of infrared images
[AD-A107910] p0096 N82-17567

METAL VAPOR LASERS

A shuttle scanning laser altimeter for topographic mapping p0083 A82-27632

METEOROLOGICAL CHARTS

The design and implementation of an operational, computer-based weather radar system --- rainfall maps
[RSRE-MEMO-3151] p0122 N82-21499

METEOROLOGICAL FLIGHT

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

METEOROLOGICAL PARAMETERS

Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis p0073 A82-19179

A study of model parameters associated with the urban climate using HCMM data --- analysis of St Louis Missouri infrared imagery
[E82-10160] p0080 N82-21684

METEOROLOGICAL RADAR

The design and implementation of an operational, computer-based weather radar system --- rainfall maps
[RSRE-MEMO-3151] p0122 N82-21499

METEOROLOGICAL SATELLITES

Climate observing system studies An element of the NASA Climate Research Program Workshop report
[NASA-TM-84040] p0078 N82-18808

METEOROLOGICAL SERVICES

Analyses of the Eastern Pacific without ship PAPA data --- buoys, radar and satellite to replace weathership
p0093 A82-19139

Publications and reports on contracts and grants, 1980
[PB82-103219] p0138 N82-17792

METEOSAT SATELLITE

Detection of natural disasters via Meteosat
p0075 A82-27040

Atlas of METEOSAT imagery
[ESA-SP-1030] p0124 N82-21700

MEXICO

Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images
p0076 A82-27690

Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0117 A82-27693

Sonora exploratory study for the detection of wheat leaf rust
[E82-10133] p0070 N82-21661

MICHIGAN

HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission
p0115 A82-27655

Seasat imagery for detection of coastal Wetlands
p0063 A82-27700

Resourceful decisions LANDAT in Michigan
[E82-10037] p0078 N82-19601

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida
[NASA-CR-166827] p0121 N82-20607

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction
p0121 N82-20608

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

MSU test of P-model p0121 N82-20614

MICROCOMPUTERS

Development and implementation of a low cost micro computer system for Landsat analysis and geographic data base application p0129 A82-27649

A microcomputer for control of data collection platforms --- GOES satellites
[INPE-2104-RPE/331] p0133 N82-18881

MICROWAVE EMISSION

Soil moisture determination - Experiments with passive microwave radiometers p0057 A82-19529

Microwave radiometry of lands under natural and artificial moistening p0057 A82-21028

Microwave radiation peculiarities of vegetative covers
p0058 A82-21029

Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030

Theoretical and experimental studies of microwave emission signatures of snow p0125 A82-21034

Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere p0093 A82-21921

An optical model for the microwave properties of sea ice
[NASA-TM-83865] p0095 N82-17561

Satellite-derived ice data sets no 1 Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976
[NASA-TM-83812] p0096 N82-17563

Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

MICROWAVE IMAGERY

Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements p0131 A82-28142

MICROWAVE RADIOMETERS

Microwave brightness temperature pattern over the Indian subcontinent and the surrounding oceans as observed by the satellite microwave radiometer /SAMIR/ onboard Bhaskara p0093 A82-19560

Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063

The structure and basic parameters of a satellite system for the remote sensing of earth resources
p0131 A82-28129

The microwave radiometer spacecraft A design study Executive summary p0131 N82-16154

Mission definition for a large-aperture microwave radiometer spacecraft p0131 N82-16155

Imaging microwave radiometer Phase A study Volume 1 Executive summary --- instrument for the European Remote Sensing system payload
[ESS/SS-1006] p0132 N82-18564

Assessment of the quality of GATE area rainfall data from a Nimbus-5 radiometer
[NASA-CR-168512] p0109 N82-20807

Context sensitive formulations of antenna pattern correction and side lobe compensation for NOSS/LAMMR real time processing
[NASA-CR-166789] p0122 N82-21457

MICROWAVE SCATTERING
Microwave radiation from a natural snow field p0101 A82-19559
The use of satellite data in rainfall monitoring --- Book p0101 A82-22873
Remote sensing of rainfall rates using airborne microwave rain-scatterometer/radiometer p0105 A82-27639
Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] p0095 N82-16331
Active microwave investigation of snowpacks. Experimental documentation. Colorado 1979-1980
[NASA-CR-166727] p0107 N82-19646
Ground registration of data from an airborne scatterometer
[E82-10084] p0068 N82-21636

MICROWAVE SENSORS
Towards the definition of optimum sensor specifications for microwave remote sensing of snow p0125 A82-21035
Microwave remote sensing. Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry --- Book p0126 A82-22877
The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] p0133 N82-19647
MRSE: A Microwave Remote Sensing Experiment in Spacelab p0134 N82-20375

MIDLATITUDE ATMOSPHERE
Ionospheric troughs in Antarctica p0073 A82-21217
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] p0120 N82-19788

MINERAL DEPOSITS
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery p0089 A82-26015
One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India p0089 A82-26017
Ore deposits in Africa and their relation to the underlying mantle p0090 A82-26604
Utilisation of remote sensing in resources identification and land use in India - An integrated approach p0076 A82-27701
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] p0091 N82-16446
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] p0091 N82-19624

MINERAL EXPLORATION
Towards an operational SPOT system - A preliminary assessment --- earth observation satellites for resources management p0114 A82-27607
Airborne remote sensing in east Greenland p0090 A82-27695
Earth-scanning satellites lead resource hunt p0117 A82-28343
Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] p0091 N82-16442
Brazilian remote sensing activities: current and prospective needs
[E82-10026] p0132 N82-16444
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] p0091 N82-16446
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10137] p0092 N82-21664

MINES (EXCAVATIONS)
Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0090 A82-27694

MINNESOTA
Use of GOES and TIROS/NOAA satellite data for snow cover mapping p0101 A82-22145

MISSION PLANNING
The Japanese MOS and Los program --- Marine Observation Satellite p0129 A82-27606
The first ESA remote sensing satellite system ERS-1 p0094 A82-27608
Mission definition for a large-aperture microwave radiometer spacecraft p0131 N82-16155

MISSISSIPPI
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19609

MISSOURI
An investigation of the ozone plume from a small city p0074 A82-26329
A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri
[E82-10140] p0079 N82-21667
A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683
A study of model parameters associated with the urban climate using HCMM data --- analysis of St. Louis, Missouri infrared imagery
[E82-10160] p0080 N82-21684

MODULATION TRANSFER FUNCTION
An automatic optimum kernel-size selection technique for edge enhancement p0113 A82-26840

MOIRE EFFECTS
Calibration and model reconstruction in analytical close-range stereophotogrammetry. II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

MOISTURE CONTENT
Microwave radiometry of lands under natural and artificial moistening p0057 A82-21028
Microwave radiation peculiarities of vegetative covers p0058 A82-21029
Investigation of the vegetative covers on ploughed areas by SLAR p0058 A82-21031
Towards the definition of optimum sensor specifications for microwave remote sensing of snow p0125 A82-21035
The estimation of the surface moisture of a vegetated soil using aerial infrared photography p0058 A82-21093
Remote-sensing functions in the interpretation of moisture from aerial and space images p0102 A82-27459
A gradient model of vegetation and climate utilizing NOAA satellite imagery. Phase 1: Texas transect
[E82-10107] p0069 N82-21648
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

MONGOLIA
The use of space photographs for hydrogeological studies of the Baikal region and Mongolia p0103 A82-27468

MONOCHROMATORS
Stratospheric instruments and analyses p0133 N82-18776

MONSOONS
Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721
Arabian sea project of 1980. Composites of infrared images
[AD-A107910] p0096 N82-17567

MONTANA
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

MOROCCO
Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/ p0089 A82-26014

MOSAICS
Arabian sea project of 1980. Composites of infrared images
[AD-A107910] p0096 N82-17567

MOTHS
The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612

MOUNTAINS
Landsat thermal imaging of alpine regions p0079 A82-22147
Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/ p0089 A82-26014
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale p0090 A82-27672

MULTISPECTRAL BAND CAMERAS
Spectritek - A multispectral electron-optic pushbroom camera p0129 A82-27633

MULTISPECTRAL BAND SCANNERS
Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data p0125 A82-21091
Digital photography techniques p0112 A82-21398
Analysis of the direction-dependent radiation behavior in multispectral scanning data p0125 A82-21399
Information expectations from Landsat-D p0128 A82-27563
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665
The structure and basic parameters of a satellite system for the remote sensing of earth resources p0131 A82-28129
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] p0081 N82-17562

MULTISPECTRAL IMAGERY
Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0129 A82-27642

MULTISPECTRAL LINEAR ARRAYS
A concept for an advanced earth resources satellite system p0127 A82-27579
Mapsat compared to other earth-sensing concepts p0128 A82-27581

MULTISPECTRAL PHOTOGRAPHY
Exterior algebraic processing for remotely sensed multispectral and multitemporal images p0112 A82-21041
Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144
Multispectral texture p0113 A82-25139
Imaging the earth. I - The troubled first decade of Landsat p0137 A82-27169
The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463
Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs p0103 A82-27467
Technologies for the multispectral mapping of earth resources p0128 A82-27580
An approach to path radiance correction in MSS images p0115 A82-27629
Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping p01[illegible]9 A82-27648
Airborne remote sensing in east Greenland p0090 A82-27695
The atlas 'Geographical Results of Spaceborne Multispectral Experiments' p0077 A82-28133
Construction of digital models of statistically uniform characteristics on the basis of multispectral space imagery p0117 A82-28144
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] p0118 N82-18657
Automatic analysis of multispectral images
[INPE-2212-MD/009] p0133 N82-19520
Data rate reduction: Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] p0120 N82-19654
Selection of attributes applied to multispectral images
[INPE-2303-TDL/072] p0121 N82-19927
Atlas of METEOSAT imagery
[ESA-SP-1030] p0124 N82-21700

N

NASA PROGRAMS
Climate observing system studies: An element of the NASA Climate Research Program. Workshop report
[NASA-TM-84040] p0078 N82-18808
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] p0098 N82-19801

NATIONAL OCEANIC SATELLITE SYSTEM
NOSS altimeter algorithm specifications
[NASA-RP-1083] p0095 N82-16683

NATIONAL PARKS
The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065] p0078 N82-20588

NATURAL GAS
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/ p0076 A82-27661

NATURAL GAS EXPLORATION
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery p0131 A82-28130

NAVIGATION AIDS
Satellite photos can aid navigation on aerial photo missions p0126 A82-22148

NEBRASKA
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

NEEDS (DATA SYSTEM)
An information adaptive system study report and development plan
[NASA-CR-166768] p0120 N82-19644

NETHERLANDS
The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026

NETWORK ANALYSIS
The diagnosis settlement 1980 of the German main triangulation network. Part 2: Trajectories
[SER-B-253-MITT-159-PT-2] p0085 N82-19648

NEVADA
A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841
Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634

NIGHT SKY
Registration of heat capacity mapping mission day and night images p0113 A82-22146

NITROGEN
Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20681
NITROGEN DIOXIDE
Mid-latitude summertime measurements of stratospheric NO2 p0074 A82-25149
NORTH AMERICA
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] p0081 N82-19624
NORTH DAKOTA
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635
NORTH SEA
Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data
p0127 A82-26049
Experiments in satellite Doppler control positioning at sea p0086 N82-20581
Recent results of geoid determination by combination techniques in the North Sea test area p0086 N82-20583
NUCLEAR POWER PLANTS
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0097 N82-19704

O

OCEAN BOTTOM
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] p0085 N82-19732
Some altimetric signatures from Seasat over the mid-Pacific Seamount Range
[AD-A110419] p0099 N82-21691
OCEAN COLOR SCANNER
A method for the retrieval of phytoplankton and suspended sediment concentrations from remote measurements of water colour p0094 A82-27620
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] p0120 N82-19649
Development of a breadboard cooler for infrared remote sensing payloads, phase 1 --- Earth Resources Satellite ERS 1
[FOK-RV-R-81-064] p0134 N82-19653
OCEAN CURRENTS
A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674
The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] p0098 N82-19805
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824
OCEAN DATA ACQUISITIONS SYSTEMS
Integrated sensor system for collection of wave data applied to coastal engineering design p0094 A82-27602
The first ESA remote sensing satellite system ERS-1
p0094 A82-27608
Response of the marine community to satellite-derived oceanic information p0095 A82-27684
Examination of the operational prospects for remote sensing --- in Europe
[ESA-CR(P)-1476] p0138 N82-18669
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] p0098 N82-19801
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] p0098 N82-19802
Proposed digital cartridge recording system for WRELADS --- laser airborne depth sounder
[AD-A109484] p0134 N82-20491
OCEAN DYNAMICS
Workshop on the application of existing satellite data to the study of ocean surface energetics, 19-21 November 1980, University of Wisconsin-Madison
p0094 A82-24822
A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] p0098 N82-19801
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824
OCEAN SURFACE
Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4
p0073 A82-19826
Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere p0093 A82-21921
Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063
Workshop on the application of existing satellite data to the study of ocean surface energetics, 19-21 November 1980, University of Wisconsin-Madison
p0094 A82-24822
Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596
High precision radiometric temperature measurements of the ocean surface p0094 A82-27640
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0076 A82-27661
Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677
Estimation of sea surface temperature from remote sensing in the 3.7 micron window region
p0095 A82-28031
Polarimetric method for the remote sensing of oil slicks on the sea surface p0095 A82-28135
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246039] p0095 N82-16697
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17805
Study of synthetic aperture radar in 2D - 2FS operation over the ocean --- European Remote Sensing system
[ESA-CR(P)-1475] p0132 N82-18481
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0097 N82-19704
Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] p0097 N82-19756
Surface wave statistics and spectra during high sea state conditions in the North Atlantic
[AD-A109832] p0098 N82-20827
Two-dimensional power spectra of SEASAT SAR imagery --- ocean waves p0098 N82-21469
Direct determination of the two dimensional image spectrum from raw synthetic aperture radar data
p0122 N82-21474
OCEAN TEMPERATURE
Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063
High precision radiometric temperature measurements of the ocean surface p0094 A82-27640
Estimation of sea surface temperature from remote sensing in the 3.7 micron window region
p0095 A82-28031
Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data
[INPE-2229-PRE/021] p0097 N82-19704
Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] p0097 N82-19756
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] p0097 N82-19781
OCEANOGRAPHIC PARAMETERS
Mission definition for a large-aperture microwave radiometer spacecraft p0131 N82-16155
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] p0096 N82-17798
OCEANOGRAPHY
The use of Meteor-satellite image data in oceanography p0093 A82-20344
SASS measurements of the Ku-band radar signature of the ocean p0093 A82-21917
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665
Response of the marine community to satellite-derived oceanic information p0095 A82-27684
Seasat data utilization project
[NASA-CR-168557] p0097 N82-18660
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844
Satellite-borne non-DOD sensors for terrestrial observations
[AD-A109486] p0134 N82-20630
OFFSHORE ENERGY SOURCES
Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/
p0076 A82-27661
OIL EXPLORATION
Towards an operational SPOT system - A preliminary assessment --- earth observation satellites for resources management p0114 A82-27607
Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery
p0094 A82-27619
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery
p0131 A82-28130
OIL SLICKS
Polarimetric method for the remote sensing of oil slicks on the sea surface p0095 A82-28135
OKLAHOMA
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635
ONBOARD DATA PROCESSING
An intelligent earth sensing information system
p0137 A82-22149
The Seasat low rate data processing system
p0093 A82-24061
Complex of units for the storage and automated processing of research data p0131 A82-28140
An information adaptive system study report and development plan
[NASA-CR-166768] p0120 N82-19644
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] p0120 N82-19649
Data rate reduction: Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] p0120 N82-19654
ONTARIO
Manual and automatic crop identification with airborne radar imagery p0057 A82-20408
Enhancement of Landsat data for Hudson Bay lowlands vegetation p0114 A82-27623
Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0129 A82-27642
OPTICAL DATA PROCESSING
Methods for the processing of synthetic-aperture radar signals when solving problems of the national economy /Review/ p0113 A82-26726
OPTICAL DENSITY
Analog devices for the processing of aerial and space images for the study of water resources
p0104 A82-27476
OPTICAL EMISSION SPECTROSCOPY
Measurement of atmospheric emission using a balloon-borne cryogenic Fourier spectrometer
p0074 A82-21432
OPTICAL PROPERTIES
Influence of dissolved organic materials on turbid water optical properties and remote-sensing reflectance
p0093 A82-20445
Optical properties of snow p0101 A82-21922
An optical model for the microwave properties of sea ice
[NASA-TM-83865] p0095 N82-17561
OPTICAL RADAR
The use of the airborne lidar system 'ALEX F 1' for aerosol tracing in the lower troposphere p0073 A82-20226
Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] p0096 N82-17803
Sounding the aerosol distribution over the Upper Rhine Valley in the Valley in the Speyer area by means of lidar
p0079 N82-20782
OPTICAL SCANNERS
Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography
p0117 A82-28143
OPTICAL THICKNESS
Development of a surface isolation estimation technique suitable for application of polar orbiting satellite data
[E82-10122] p0123 N82-21656
ORBIT CALCULATION
Orbital methods of celestial geodesy --- Russian book
p0079 A82-25234
ORBITAL ASSEMBLY
The microwave radiometer spacecraft: A design study. Executive summary p0131 N82-16154
ORBITAL MANEUVERS
Topex orbit sustenance maneuver design --- Ocean Topography Experiment spacecraft
[AIAA PAPER 82-0202] p0094 A82-27091
OREGON
Seasat imagery for detection of coastal Wetlands
p0063 A82-27700
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635
OROGRAPHY
Spatial reasoning in remotely sensed data
p0105 A82-27592
Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale
p0090 A82-27672
OZONE
Multidimensional aspects: Ozone, temperature and transport p0081 N82-16772
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] p0078 N82-19740
Ozone measurements to 48Km with chemiluminescent ozone detectors
[AD-A110342] p0134 N82-21808

OZONOMETRY

The NASA participation in the 1980 EPA PEPE/NEROS field measurements program p0075 A82-28621

Stratospheric instruments and analyses p0133 N82-18776

Atlas of the global distribution of the total ozone concentration according to satellite measurements [MITT-28] p0078 N82-19740

P

PACIFIC NORTHWEST (US)

Applications systems verification and transfer project. Volume 5: Operational applications of satellite snow-cover observations, northwest United States [NASA-TP-1826] p0109 N82-20621

PACIFIC OCEAN

Analyses of the Eastern Pacific without ship PAPA data --- buoys, radar and satellite to replace weathership p0093 A82-19139

The use of Meteor-satellite image data in oceanography p0093 A82-20344

A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674

Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data [E82-10047] p0119 N82-19622

Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly [NASA-CR-168639] p0085 N82-19732

Ship and satellite bio-optical research in the California Bight [NASA-CR-168681] p0098 N82-20823

Compatibility study of the MAGSAT data and aeromagnetic data [E82-10136] p0123 N82-21663

Some altimetric signatures from Seasat over the mid-Pacific Seamount Range [AD-A110419] p0099 N82-21691

PAMPAS

The Pampean Plain studied with Landsat images p0089 A82-26013

PANORAMIC SCANNING

Field-by-field multitemporal analysis of aerial scanner data geometrically corrected by means of a sliding model p0115 A82-27651

PARTICLE SIZE DISTRIBUTION

Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386

PARTICULATE SAMPLING

Airborne in-situ measurement of particulate sulfur and sulfuric acid with flame photometry and thermal analysis p0073 A82-20899

PATTERN RECOGNITION

Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns p0112 A82-21040

An airphoto key for major tropical crops p0058 A82-22142

Building and road extraction from aerial photographs p0074 A82-25140

The spectral reflectance of certain soils --- Russian book p0059 A82-26577

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Automatic linear recognition and analysis using computer program LIRA --- satellite imagery for earth observations p0090 A82-27612

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

Construction of a mathematical model for the recognition of identical images on a pair of photographs p0117 A82-28146

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE [E82-10024] p0091 N82-16442

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil [E82-10025] p0081 N82-16443

Automatic analysis of multispectral images [INPE-2212-MD/009] p0133 N82-19520

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil [INPE-2197-PRE/006] p0066 N82-19639

Methodology of the interpretation of remote sensing data and applications in pedology [INPE-2211-MD/008] p0078 N82-19641

Methodology of the interpretation of remote sensing data and applications in geomorphology [INPE-2208-MD/007] p0091 N82-19642

Land use in the Paraiba Valley through remotely sensed data --- Brazil [E82-10072] p0079 N82-20595

Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979 --- Mato Grosso do Sul, Brazil [E82-10078] p0067 N82-20601

Computer-assisted photo interpretation research at USAETL [AD-A109366] p0121 N82-20628

US corn and soybeans exploratory experiment [E82-10088] p0068 N82-21640

Interpretation of remotely sensed image data and impact of cluster compression --- impact of cluster compression; users [REPT-44 2866] p0124 N82-21899

PATTERN REGISTRATION

Registration of heat capacity mapping mission day and night images p0113 A82-22146

Automatic relocation of ground control points in LANDSAT imagery [RAE-TR-81071] p0116 N82-18657

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota [E82-10083] p0068 N82-21635

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10137] p0092 N82-21664

Delineation of soil temperature regimes from HCMM data [E82-10141] p0070 N82-21668

PEAT

Spectrometric studies of the water composition of Lake Mueggelsee p0104 A82-27474

PENNSYLVANIA

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida [NASA-CR-166827] p0121 N82-20607

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction p0121 N82-20608

Freeze prediction model --- Pennsylvania p0067 N82-20609

The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612

PERFORMANCE TESTS

An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast [AD-A109050] p0098 N82-19802

PERIODIC VARIATIONS

Development of a surface isolation estimation technique suitable for application of polar orbiting satellite data [E82-10122] p0123 N82-21656

PERMAFROST

Strategies for using remotely sensed data in hydrologic models [E82-10156] p0109 N82-21680

PERMITTIVITY

Mixture formules applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030

PETROLOGY

A data base of geologic field spectra p0090 A82-27600

PHENOLOGY

Evaluation of the state of crops from satellite data p0059 A82-27393

Automatic and semi-automatic classification of Landsat agricultural crops p0061 A82-27664

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] p0063 N82-16447

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches [E82-10069] p0065 N82-19634

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models [E82-10086] p0122 N82-21638

PHOTOCHEMICAL OXIDANTS

An investigation of the ozone plume from a small city p0074 A82-26329

PHOTOCHEMICAL REACTIONS

Multidimensional aspects: Ozone, temperature and transport p0081 N82-18772

PHOTOGEOLOGY

The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341

Structural analysis of the basement of the East European platform by remote sensing methods p0089 A82-20342

Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343

Dip determinations in photogeology p0089 A82-25453

Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016

Application of aerial and space photographic data in the study of subsurface water and tectonic structures p0090 A82-27466

A data base of geologic field spectra p0090 A82-27600

The atlas 'Geographical Results of Spaceborne Multispectral Experiments' p0077 A82-28133

Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia p0083 A82-28139

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE [E82-10024] p0091 N82-16442

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming [E82-10028] p0091 N82-16446

Weather satellite interpretation: Introduction to weather satellite imagery [PB82-107657] p0118 N82-16677

Methodology of the interpretation of remote sensing data and applications in geomorphology [INPE-2208-MD/007] p0091 N82-19642

Study project of intrusive rocks: States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil [E82-10076] p0092 N82-20599

San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition [E82-10108] p0069 N82-21649

PHOTOGRAMMETRY

The accuracy potential of the modern bundle block adjustment in aerial photogrammetry p0111 A82-20401

Analytical triangulation of space photography p0111 A82-20402

Calibration and model reconstruction in analytical close-range stereophotogrammetry. I - Mathematical fundamentals p0111 A82-20403

The location of three-dimensional linear objects by using multiple projections p0111 A82-20404

Accuracy of the normal case of close-range photogrammetry p0126 A82-22140

Calibration and model reconstruction in analytical close-range stereophotogrammetry. II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

Spaceborne photography for the study of earth resources --- Russian book p0126 A82-22397

Area determination by means of the method of finite elements p0082 A82-26048

Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data p0127 A82-26049

A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

Analytic methods of geodetic referencing of nontopographic images p0083 A82-28134

Complex examination of photorectifiers p0131 A82-28466

Improving the quality of aerial photography /Concerning the 'Basic principles of aerial photography'/ p0117 A82-28467

Photogrammetry software: A package for everyone [AD-A108098] p0118 N82-17570

Helmut Wolf: On the occasion of his 70th birthday [SER-E-18] p0084 N82-19603

Mathematical and stochastic models in photogrammetry relating to Helmut Wolf's work p0084 N82-19605

National High-Altitude Photography (NHAP) of the Tennessee Valley Region, volume 1, no. 1 [PB82-130899] p0134 N82-21703

PHOTOINTERPRETATION

Experimental evaluation of methods of the automated interpretation of crops from a Fragment MSS image p0057 A82-20349

Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409

Techniques for combining Landsat and ancillary data for digital classification improvement p0111 A82-20410

Landsat classification accuracy assessment procedures p0137 A82-20412

Crop classification using airborne radar and Landsat data p0068 A82-21033

Maximum likelihood estimation of label imperfection probabilities and its use in the identification of mislabeled patterns p0112 A82-21040

A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Dip determinations in photogeology p0089 A82-25453

Modeling misregistration and related effects on multispectral classification p0113 A82-25455

Satellite photograph interpretation p0127 A82-25460

A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050

Evaluation of the state of crops from satellite data p0059 A82-27393

Remote-sensing functions in the interpretation of moisture from aerial and space images p0102 A82-27459

The use of space photographs for hydrogeological studies of the Baikal region and Mongolia p0103 A82-27468

Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473

Analog devices for the processing of aerial and space images for the study of water resources p0104 A82-27476
Investigation of the earth on the basis of space photographic data p0082 A82-27507
Context dependent modeling --- for remote sensing data processing p0114 A82-27587
Spatial reasoning in remotely sensed data p0105 A82-27592
Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665
An autodigitizing procedure for ground-data labelling of Landsat pixels p0062 A82-27682
Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images p0076 A82-27690
The atlas 'Geographical Results of Spaceborne Multispectral Experiments' p0077 A82-28133
The use of space photographs to compile water-amelioration maps p0106 A82-28137
Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography p0117 A82-28143
Construction of a mathematical model for the recognition of identical images on a pair of photographs p0117 A82-28146
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] p0118 N82-16437
Weather satellite interpretation Introduction to weather satellite imagery
[PB82-107657] p0118 N82-16677
Arabian sea project of 1980 Composites of infrared images
[AD-A107910] p0086 N82-17567
Automatic analysis of multispectral images
[INPE-2212-MD/009] p0133 N82-19520
Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] p0066 N82-19639
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] p0066 N82-19640
Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] p0078 N82-19641
Methodology of the interpretation of remote sensing data and applications in geomorphology
[INPE-2209-MD/00., p0091 N82-19642
Land use in the Paraiba Valley through remotely sensed data --- Brazil
[E82-10072] p0079 N82-20595
Study project of intrusive rocks States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil
[E82-10076] p0092 N82-20599
Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979 --- Mato Grosso do Sul, Brazil
[E82-10078] p0067 N82-20601
The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620
Applications systems verification and transfer project. Volume 8 Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624
Computer-assisted photo interpretation research at USAETL
[AD-A109366] p0121 N82-20628

PHOTOMAPPING
Analysis of space imagery to compile a geomorphological map of the world p0089 A82-20338
Analytical triangulation of space photography p0111 A82-20402
Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407
Sampling for thematic map accuracy testing p0111 A82-20411
Towards the definition of optimum sensor specifications for microwave remote sensing of snow p0125 A82-21035
Exterior algebraic processing for remotely sensed multispectral and multitemporal images p0112 A82-21041
Remote sensing for natural resources An international view of problems, promises and accomplishments --- Book p0137 A82-21875
A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143
Use of GOES and TIROS/NOAA satellite data for snow-cover mapping p0101 A82-22145
A procedure for the interactive tracing of edges and lines by means of digital image processing p0113 A82-26050
The spectral reflectance of certain soils --- Russian book p0059 A82-26577
Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397
Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs p0103 A82-27467
Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470
Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472
Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473
Investigation of the earth on the basis of space photographic data p0082 A82-27507
Technologies for the multispectral mapping of earth resources p0128 A82-27580
Spatial reasoning in remotely sensed data p0105 A82-27592
An evaluation of the utility of smaller Landsat resolution elements /Resolution of Landsat resolution/ p0114 A82-27625
Spatial resolution and geometric potential of planned earth satellite missions p0130 A82-27683
Natural resources inventories by computer-satellite mapping techniques in Chaco State, Argentine Republic, South America p0116 A82-27688
Assessment of change in Bangladesh coastal regions p0076 A82-27696
Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia p0083 A82-28139
Characteristics of the use of laser-mirror scanners for image processing in cartography and aerial photography p0117 A82-28143
Earth-scanning satellites lead resource hunt p0117 A82-28343
Applications systems verification and transfer project. Volume 1 Operational applications of satellite snow cover observations Executive summary --- Usefulness of satellite snow-cover data for water yield prediction
[NASA-TP-1822] p0108 N82-20617
Applications systems verification and transfer project. Volume 2 Operational applications of satellite snow-cover observations and data-collection systems in the Arizona test site
[NASA-TP-1823] p0108 N82-20618
Applications systems verification and transfer project. Volume 6 Operational applications of satellite snow-cover observations NOAA/NESS support study
[NASA-TP-1827] p0109 N82-20622
Computer-assisted photo interpretation research at USAETL
[AD-A109366] p0121 N82-20628
National High-Altitude Photography (NHAP) of the Tennessee Valley Region, volume 1, no. 1
[PB82-130899] p0134 N82-21703

PHOTOMAPS
Satellite photos can aid navigation on aerial photo missions p0126 A82-22148
AgRISTARS Interim catalog ground data summary data acquisition year 1979
[E82-10032] p0064 N82-19608

PHOTOMETRY
A photometric method for depth determination by aerial photography p0101 A82-19831
Investigation of earth resources using rocket and space technology p0130 A82-28127
Possibilities of using experience gained from the thematic mapping of the moon in studies of earth resources by remote sensing methods p0083 A82-28138

PHOTORECONNAISSANCE
Satellite photograph interpretation p0127 A82-25460

PIEDMONTS
Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia p0083 A82-28139

PLAINS
Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] p0107 N82-19790

PLANETARY BOUNDARY LAYER
Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

PLANETARY MAPPING
A shuttle scanning laser altimeter for topographic mapping p0083 A82-27632

PLANETARY WAVES
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824

PLANKTON
A method for the retrieval of phytoplankton and suspended sediment concentrations from remote measurements of water colour p0084 A82-27620
Ship and satellite bio-optical research in the California Bight
[NASA-CR-168881] p0086 N82-20823

PLANT STRESS
Humidity measurement by infrared thermometry p0075 A82-26844
Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] p0064 N82-19607
AgRISTARS Soil moisture/early warning and crop condition assessment Interface control document
[E82-10053] p0065 N82-19628
Remote sensing of sulfur dioxide effects on vegetation. Volume 1 Summary
[PB82-115122] p0066 N82-19715
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] p0078 N82-19740
Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597
As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models
[E82-10086] p0122 N82-21638
Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana
[E82-10105] p0068 N82-21647
Wheat stress indicator model, Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652
A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657
Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670

PLANTS (BOTANY)
Spectral reflectance of hydrophytes p0102 A82-24960

PLOTTERS
A digital technique for constructing variable-width lines
[AD-A110287] p0087 N82-21689

PLUMES
Airborne in-situ measurement of particulate sulfur and sulfuric acid with flame photometry and thermal analysis p0073 A82-20999
Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386
An investigation of the ozone plume from a small city p0074 A82-26329
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

POLAR REGIONS
Ionospheric troughs in Antarctica p0073 A82-21217

POLARIMETRY
Polarimetric method for the remote sensing of oil slicks on the sea surface p0085 A82-28135

POLLUTION MONITORING
The use of the airborne lidar system 'ALEX F 1' for aerosol tracing in the lower troposphere p0073 A82-20226
Airborne in-situ measurement of particulate sulfur and sulfuric acid with flame photometry and thermal analysis p0073 A82-20999
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
Evaluation of snow-cover pollution in industrial regions using satellite TV images p0103 A82-27464
Monitoring of the thermal pollution of natural channels of water using infrared aerial photography p0104 A82-27471
Noncontact methods for the quality control of water resources p0104 A82-27475
Model studies of laser absorption computed tomography for remote air pollution measurement p0077 A82-28152
Optimal network density for atmospheric recording p0079 N82-20776

POLLUTION TRANSPORT
An investigation of the ozone plume from a small city p0074 A82-26329
LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

POSITION (LOCATION)
The location of three-dimensional linear objects by using multiple projections p0111 A82-20404
Accuracy of the normal case of close-range photogrammetry p0126 A82-22140

POSITION ERRORS
An evaluation of ISOCLS and CLASSY clustering algorithms for forest classification in northern Idaho --- Elk River quadrange of the Clearwater National Forest
[E82-10109] p0069 N82-21650

POSITION INDICATORS
Experiments in satellite Doppler control positioning at sea p0086 N82-20581

POTATOES
A timely and accurate potato acreage estimate from Landsat - Results of a demonstration p0060 A82-27621

POTENTIAL FIELDS
Continuation of potential field data to a common altitude --- magsat data
[E82-10138] p0123 N82-21665

POWER SPECTRA
Application and experimental verification of an empirical backscattering cross section model for the earth's surface p0081 A82-21036
Harmonic structure of Pc 3-4 pulsations p0082 A82-26266

Surface wave statistics and spectra during high sea state conditions in the North Atlantic
[AD-A109832] p0098 N82-20827
Two-dimensional power spectra of SEASAT SAR imagery --- ocean waves p0098 N82-21469

PRECIPITATION (METEOROLOGY)
Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 A82-19177
Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD p0077 A82-28295
Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597

PRECIPITATION PARTICLE MEASUREMENT
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] p0120 N82-19788

PREDICTION ANALYSIS TECHNIQUES
Agricultural soil moisture experiment, Colby, Kansas 1978: Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632

PRESSURE DISTRIBUTION
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697

PROCUREMENT MANAGEMENT
Remote sensing procurement package: A management report for state and local governments
[E82-10052] p0138 N82-19627

PROFILOMETERS
Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619
Electromagnetic subsurface measurements
[AD-A108192] p0106 N82-18469

PROJECT MANAGEMENT
AgRISTARS: Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] p0065 N82-19628
AgRISTARS: Yield model development/soil moisture. Interface control document
[E82-10054] p0065 N82-19629
Project communications/documentation standards manual
[E82-10093] p0068 N82-21645

PULSED LASERS
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] p0096 N82-17803

PUSHBROOM SENSOR MODES
Digital photography techniques p0112 A82-21398
Spectritek - A multispectral electron-optic pushbroom camera p0129 A82-27633

PYRAMID LAKE (NV)
Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634

Q

QUALITY CONTROL
Image quality control in the Meteosat ground processing system p0125 A82-21090

R

RADAR CROSS SECTIONS
Comparison of sigma/deg/ obtained from the conventional definition with sigma/deg/ appearing in the radar equation for randomly rough surfaces p0112 A82-21039

RADAR DATA
NOSS altimeter algorithm specifications
[NASA-RP-1083] p0095 N82-16683
Study of synthetic aperture radar in 2D - 2FS operation over the ocean --- European Remote Sensing system
[ESA-CR(P)-1475] p0132 N82-18481
Active microwave investigation of snowpacks. Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] p0107 N82-19646
The design and implementation of an operational, computer-based weather radar system --- rainfall maps
[RSRE-MEMO-3151] p0122 N82-21499

RADAR ECHOES
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17805

RADAR GEOLOGY
Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image p0082 A82-26843
Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619
Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665

RADAR IMAGERY
Manual and automatic crop identification with airborne radar imagery p0057 A82-20408
Classification of ice radar imagery p0113 A82-22891
Analysis of two Seasat synthetic aperture radar images of an urban scene p0074 A82-25452
Spaceborne radar observation of the earth surface p0127 A82-27578
Overview of digital processing of SAR data --- from Seasat-A p0128 A82-27589
Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate p0128 A82-27594
Wide area, coarse resolution imaging with satellite-borne synthetic aperture radars in low-earth and geosynchronous orbits p0082 A82-27631
The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675
Seasat imagery for detection of coastal Wetlands p0063 A82-27700
Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452
SAR image quality --- conference, Frascati, Italy, 11-12 Dec. 1980, synthetic aperture radar (SAR)
[ESA-SP-172] p0122 N82-21458
Two-dimensional power spectra of SEASAT SAR imagery --- ocean waves p0098 N82-21469
Direct determination of the two dimensional image spectrum from raw synthetic aperture radar data p0122 N82-21474
Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475
Observation of the Earth by radar
[NASA-TM-76830] p0124 N82-21687

RADAR MEASUREMENT
Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386
Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD p0077 A82-28295
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] p0096 N82-17802
Electromagnetic subsurface measurements
[AD-A108192] p0106 N82-18469
Sea ice movements from synthetic aperture radar
[AD-A109002] p0097 N82-19435

RADAR SCATTERING
The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027
Investigation of the vegetative covers on ploughed areas by SLAR p0058 A82-21031
Volumetric effects in cross-polarized airborne radar data p0058 A82-21032
Crop classification using airborne radar and Landsat data p0058 A82-21033
Application and experimental verification of an empirical backscattering cross section model for the earth's surface p0081 A82-21036
On randomly absorbing and scattering surface layers p0079 A82-21037
A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038
Comparison of sigma/deg/ obtained from the conventional definition with sigma/deg/ appearing in the radar equation for randomly rough surfaces p0112 A82-21039

RADAR SIGNATURES
A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038
SASS measurements of the Ku-band radar signature of the ocean p0093 A82-21917

RADIANCE
Measurement of atmospheric emission using a balloon-borne cryogenic Fourier spectrometer p0074 A82-21432
Dew and vapor pressure as complicating factors in the interpretation of spectral radiance from crops p0060 A82-27617
An approach to path radiance correction in MSS images p0115 A82-27629
High precision radiometric temperature measurements of the ocean surface p0094 A82-27640
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters p0118 N82-18656
As-built design specification for the CLASFYG program
[E82-10082] p0068 N82-21644
Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters
[NASA-TP-1993] p0110 N82-21774

RADIANT FLUX DENSITY
Regional properties of angular reflectance models p0083 N82-17599

RADIATION COUNTERS
Ozone measurements to 48Km with chemiluminescent ozone detectors
[AD-A110342] p0134 N82-21808

RADIATION MEASURING INSTRUMENTS
Analysis of the direction-dependent radiation behavior in multispectral scanning data p0125 A82-21399

RADIATIVE TRANSFER
Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422
Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance p0112 A82-20423
Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030
Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere p0093 A82-21921
Optical properties of snow p0101 A82-21922
Microwave remote sensing: Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry --- Book p0126 A82-22877
Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0129 A82-27642
Simplified algorithm for calculating radiative transfer in satellite images
[INPE-2169-RPE/385] p0118 N82-16450
A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri
[E82-10140] p0079 N82-21667

RADIO ALTIMETERS
The structure and basic parameters of a satellite system for the remote sensing of earth resources p0131 A82-28129
NOSS altimeter algorithm specifications
[NASA-RP-1083] p0095 N82-16683
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary --- Earth Resources Satellite (ERS 1)
[SPAR-R-1090-ISSUE-A] p0133 N82-19652

RADIO RECEPTION
A low cost NOAA/TIROS AVHRR receiving station --- Advanced Very High Resolution Radiometer p0130 A82-27681

RADIOMETERS
Microwave remote sensing: Active and passive. Volume 1 - Microwave remote sensing fundamentals and radiometry --- Book p0126 A82-22877
Stratospheric instruments and analyses p0133 N82-18776
A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669
Cloud Top Scanning radiometer (CTS): User's guide
[NASA-TM-83887] p0135 N82-21826

RADIOMETRIC CORRECTION
Primary processing of and possibilities of using data from the meteorological satellite TIROS-N p0103 A82-27470
Context sensitive formulations of antenna pattern correction and side lobe compensation for NOSS/LAMMR real time processing
[NASA-CR-166789] p0122 N82 21457

RADIOMETRIC RESOLUTION
Image quality control in the Meteosat ground processing system p0125 A82-21090
Technologies for the multispectral mapping of earth resources p0128 A82-27580
Operational resampling for correcting images to a geocoded format --- in remote sensing p0114 A82-27590
Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

RAIN
The use of satellite data in rainfall monitoring --- Book p0101 A82-22873
Remote sensing of rainfall rates using airborne microwave rain-scatterometer/radiometer p0105 A82-27639
A vegetation response model applied to range inventory and monitoring using Landsat MSS data p0060 A82-27643
Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] p0097 N82-19778
Precipitation assessment from environmental satellite data for northwest Libya including the Gefara plan
[RSC-4] p0107 N82-19790
Assessment of the quality of GATE area rainfall data from a Nimbus-5 radiometer
[NASA-CR-168512] p0109 N82-20807

RAIN FORESTS
Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027

RANDOM PROCESSES
On randomly absorbing and scattering surface layers p0079 A82-21037

RANDOM SAMPLING
Using known map category marginal frequencies to improve estimates of thematic map accuracy p0113 A82-25456
Development of rotation sample designs for the estimation of crop acreages
[E82-10117] p0070 N82-21654

RANGE LANDS
A vegetation response model applied to range inventory and monitoring using Landsat MSS data
p0050 A82-27643

RANGELANDS
Assessing mesquite-grass vegetation condition from Landsat p0059 A82-25457
Landsat MSS applied to rangeland management in Western Canada p0063 A82-27697
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447
San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition
[E82-10108] p0069 N82-21649

RECLAMATION
Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19609

RECREATION
San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition
[E82-10108] p0069 N82-21649

RECTIFIERS
Complex examination of photorectifiers
p0131 A82-28466

REFERENCE STARS
Correlation identification of stellar configurations for purposes of the coordinate referencing of aerial and space images p0117 A82-28141

REFLECTANCE
Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422
Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance p0112 A82-20423
Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645
Regional properties of angular reflectance models
p0083 N82-17599
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] p0120 N82-19645
A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657
A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669
Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154] p0123 N82-21678

REFRACTED WAVES
An optical model for the microwave properties of sea ice
[NASA-TM-83865] p0095 N82-17561

REGIONAL PLANNING
The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

REGRESSION ANALYSIS
Evaluation of large area crop estimation techniques
p0061 A82-27662
Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

RELAY SATELLITES
General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] p0078 N82-19256

RELIEF MAPS
The use of digital terrain model in the rectification of satellite-borne imagery p0115 A82-27626
Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690
Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

REMOTE SENSING
Effects of the atmosphere on the detection of surface changes from Landsat multispectral scanner data
p0125 A82-21091
Remote sensing and international law
p0137 A82-24343
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] p0066 N82-19716

REMOTE SENSORS
Advanced aerospace remote sensing systems for global resource applications p0127 A82-27577
Satellite Earth resources data, module U-3
[E82-10035] p0119 N82-19611
Cloud Top Scanning radiometer (CTS): User's guide
[NASA-TM-83887] p0135 N82-21826

RESCUE OPERATIONS
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets
[AD-A108404] p0132 N82-18466

RESERVOIRS
Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605
Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters
[NASA-TP-1993] p0110 N82-21774

RESOURCES MANAGEMENT
Remote sensing for natural resources: An international view of problems, promises and accomplishments --- Book p0137 A82-21875
Towards an operational SPOT system - A preliminary assessment --- earth observation satellites for resources management p0114 A82-27607
Strategies and uses of small distributed analysis centers as in the natural resource inventory of Venezuela
p0115 A82-27636
Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445
Resourceful decisions: LANDAT in Michigan
[E82-10037] p0073 N82-19601

RETROREFLECTION
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824

RING CURRENTS
Investigations of medium wavelength magnetic anomalies in the Eastern Pacific using Magsat data
[E82-10047] p0119 N82-19622
Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10075] p0086 N82-20598

RIVER BASINS
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs
p0102 A82-27462
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] p0119 N82-19613
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations: Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620

RIVERS
Monitoring of the thermal pollution of natural channels of water using infrared aerial photography
p0104 A82-27471
Measurement of river sediments
[WMO-561] p0107 N82-18670
Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota soil moisture; and water temperature of Lake Anna, Virginia
[E82-10064] p0108 N82-20587

ROADS
Building and road extraction from aerial photographs
p0074 A82-25140

ROCK INTRUSIONS
Study project of intrusive rocks: States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo --- Brazil
[E82-10076] p0092 N82-20599

ROCK MECHANICS
Ore deposits in Africa and their relation to the underlying mantle p0080 A82-26604

ROCKET-BORNE PHOTOGRAPHY
Investigation of earth resources using rocket and space technology p0130 A82-28127

ROCKS
One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India
p0089 A82-26017
Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei
[E82-10073] p0091 N82-20596

RUST FUNGI
Sonora exploratory study for the detection of wheat-leaf rust
[E82-10133] p0070 N82-21661

S

SACRAMENTO VALLEY (CA)
HCMM: Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau
[E82-10135] p0092 N82-21662

SAFETY FACTORS
AgRISTARS: Agriculture and Resources Inventory Surveys Through Aerospace Remote Sensing. Enumerator's manual, 1981 ground data survey
[E82-10116] p0069 N82-21653

SAHARA DESERT (AFRICA)
Dust from the Sahara in satellite images
p0079 N82-20802

SALINITY
Remote sensing of salinity in the San Francisco Bay Delta p0102 A82-26839

SAMPLING
Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590

SAN FRANCISCO BAY (CA)
Remote sensing of salinity in the San Francisco Bay Delta p0102 A82-26839

SANDS
Dust from the Sahara in satellite images
p0079 N82-20802

SATELLITE ATTITUDE CONTROL
Spaceborne photography for the study of earth resources --- Russian book p0126 A82-22397

SATELLITE CONFIGURATIONS
The microwave radiometer spacecraft: A design study. Executive summary p0131 N82-16154
Mission definition for a large aperture microwave radiometer spacecraft p0131 N82-16155
General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] p0078 N82-19256

SATELLITE NAVIGATION SYSTEMS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] p0096 N82-17566

SATELLITE OBSERVATION
Detection of natural disasters via Meteosat
p0075 A82-27040
Satellite Earth resources data, module U-3
[E82-10035] p0119 N82-19611

SATELLITE ORBITS
Orbital methods of celestial geodesy --- Russian book
p0079 A82-25234

SATELLITE-BORNE INSTRUMENTS
The Landsat program - Moving ahead
p0137 A82-21280
Superconducting tensor gravity gradiometer
p0126 A82-23045
Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063
International Symposium on Remote Sensing of Environment, 15th, University of Michigan, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volumes 1, 2 & 3
p0127 A82-27576
Advanced aerospace remote sensing systems for global resource applications p0127 A82-27577
A concept for an advanced earth resources satellite system p0127 A82-27579
The Japanese MOS and Los program --- Marine Observation Satellite p0129 A82-27606
The first ESA remote sensing satellite system ERS-1
p0094 A82-27608
Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653
The structure and basic parameters of a satellite system for the remote sensing of earth resources
p0131 A82-28129
Seasat data utilization project
[NASA-CR-168557] p0097 N82-18660
General configuration and internal disposition of equipment in a satellite for collecting environmental data
[INPE-2240-PRE/026] p0078 N82-19256
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] p0133 N82-19647
NASA Oceanic Processes Program, Fiscal Year 1981
[NASA-TM-84467] p0098 N82-19801
Satellite-borne non-DOD sensors for terrestrial observations
[AD-A109486] p0134 N82-20630

SATELLITE-BORNE PHOTOGRAPHY
Spaceborne photography for the study of earth resources --- Russian book p0126 A82-22397
The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469
Present and future studies of natural resources and the environment from space p0138 A82-27506
Investigation of the earth on the basis of space photographic data p0082 A82-27507
Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980
p0105 A82-27634
University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659
Satellite Earth resources data, module U-3
[E82-10035] p0119 N82-19611
Atlas of METEOSAT imagery
[ESA-SP-1030] p0124 N82-21700

SATELLITE-BORNE RADAR
Spaceborne radar observation of the earth surface
p0127 A82-27578

SCANNERS
A shuttle scanning laser altimeter for topographic mapping p0083 A82-27632
Cloud Top Scanning radiometer (CTS) User's guide [NASA-TM-83887] p0135 N82-21826
SCATTERING COEFFICIENTS
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027
SCATTERING CROSS SECTIONS
Application and experimental verification of an empirical backscattering cross section model for the earth's surface p0081 A82-21036
SCATTEROMETERS
SASS measurements of the Ku-band radar signature of the ocean p0083 A82-21917
Sea state measurement with a two frequency scatterometer (theory) [ESA-TT-710] p0096 N82-17802
Satellite scatterometer feasibility study. Volume 1. Technical results --- Earth Resources Satellite (ERS 1) [ESA-CR(P)-1492-VOL-1] p0133 N82-19650
Satellite scatterometer feasibility study. Volume 2. Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1) [ESA-CR(P)-1492-VOL-2] p0133 N82-19651
MRSE: A Microwave Remote Sensing Experiment in Spacelab p0134 N82-20375
SCENE ANALYSIS
Building and road extraction from aerial photographs p0074 A82-25140
Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624
A technique for automatic labeling of Landsat agricultural scene elements by analysis of temporal-spectral patterns p0062 A82-27678
The Office for Remote Sensing of Earth Resources --- Pennsylvania p0121 N82-20612
SCIENTISTS
Helmut Wolf: On the occasion of his 70th birthday [SER-E-18] p0084 N82-19603
SCOTLAND
University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659
SEA ICE
Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619
The use of data from satellite-borne microwave scanning radiometers for the automated compilation of operational maps of ice cover for the Arctic Ocean p0095 A82-28145
An optical model for the microwave properties of sea ice [NASA-TM-83865] p0095 N82-17561
Satellite-derived ice data sets no. 1: Antarctic monthly average microwave brightness temperatures and sea-ice concentrations, 1973 - 1976 [NASA-TM-83812] p0096 N82-17563
Remote sensing techniques suitable for exploration and navigation in and under sea ice [FOA-REPT-VOL-15-NO-2] p0096 N82-17566
Sea ice movements from synthetic aperture radar [AD-A109002] p0097 N82-19435
SEA ROUGHNESS
Workshop on the application of existing satellite data to the study of ocean surface energetics. 19-21 November 1980. University of Wisconsin-Madison p0094 A82-24822
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A [PB81-246035] p0095 N82-16697
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses [NASA-CR-168444] p0096 N82-17798
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection [PB82-113283] p0096 N82-17805
Observation of the Earth by radar [NASA-TM-76830] p0124 N82-21687
SEA STATES
Some peculiarities of formulation and solution of inverse problems in microwave radiometry of the ocean surface and atmosphere p0093 A82-21921
Sea state measurement with a two frequency scatterometer (theory) [ESA-TT-710] p0096 N82-17802
Surface wave statistics and spectra during high sea state conditions in the North Atlantic [AD-A109837] p0098 N82-20827
SEA TRUTH
Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619
SEA WATER
Influence of dissolved organic materials on turbid water optical properties and remote-sensing reflectance p0093 A82-20445
Structure and variability of the Alboran Sea frontal system p0093 A82-20447
Brazilian remote sensing activities, current and prospective needs [E82-10026] p0132 N82-16444
SEAMOUNTS
Some altimetric signatures from Seasat over the mid-Pacific Seamount Range [AD-A110419] p0099 N82-21691
SEARCH RADAR
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets [AD-A108404] p0132 N82-18466
SEASAT-A SATELLITE
Seasat data utilization project [NASA-CR-168557] p0097 N82-18860
SECULAR VARIATIONS
Studies related to Magsat --- Backus effect and the westward drift [E82-10050] p0085 N82-19625
SEDIMENT TRANSPORT
Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472
Measurement of river sediments [WMO-561] p0107 N82-18870
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil [E82-10082] p0108 N82-20605
SEDIMENTS
A method for the retrieval of phytoplankton and suspended sediment concentrations from remote measurements of water colour p0094 A82-27620
Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters [NASA-TP-1993] p0110 N82-21774
SERVICES
National High-Altitude Photography (NHAP) of the Tennessee Valley Region, volume 1, no. 1 [PB82-130899] p0134 N82-21703
SHALLOW WATER
Survey and mapping of shallow water bodies and the distribution of the river runoff of solids on the basis of multispectral aerial and space photographs p0103 A82-27467
SIBERIA
Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
The use of space photographs for hydrogeological studies of the Baikal region and Mongolia p0103 A82-27468
SICILY
Remote SO2 emission measurements with correlation spectrometers from volcanoes p0077 A82-27704
Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei [E82-10073] p0091 N82-20596
SIDE-LOOKING RADAR
Investigation of the vegetative covers on ploughed areas by SLAR p0058 A82-21031
Classification of ice radar imagery p0113 A82-22891
Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611
The structure and basic parameters of a satellite system for the remote sensing of earth resources p0131 A82-28129
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses [NASA-CR-168444] p0096 N82-17798
Evaluation of two AN/APS-94 side-looking airborne radar systems in the detection of search and rescue targets [AD-A108404] p0132 N82-18466
SIDELOBE REDUCTION
Context sensitive formulations of antenna pattern correction and side lobe compensation for NOSS/LAMMR real time processing [NASA-CR-166789] p0122 N82-21457
SIERRA NEVADA MOUNTAINS (CA)
Applications systems verification and transfer project. Volume 3: Operational applications of satellite snow cover observations in California [NASA-TP-1824] p0108 N82-20619
SIGNAL ANALYSIS
Sea state measurement with a two frequency scatterometer (theory) [ESA-TT-710] p0096 N82-17802
SIGNAL PROCESSING
Methods for the processing of synthetic-aperture radar signals when solving problems of the national economy /Review/ p0113 A82-26726
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection [PB82-113283] p0096 N82-17805
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary --- Earth Resources Satellite (ERS 1) [SPAR-R-1090-ISSUE-A] p0133 N82-19652
SIGNAL TO NOISE RATIOS
Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate p0128 A82-27594
SIGNATURE ANALYSIS
AgRISTARS: Foreign commodity production forecasting. Corn/soybean decision logic development and testing [E82-10056] p0065 N82-19631
Dust from the Sahara in satellite images p0079 N82-20802
Delineation of soil temperature regimes from HCMM data [E82-10141] p0070 N82-21668
SLOPES
Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image p0082 A82-26843
SMOKE
Airborne lidar measurements of smoke plume distribution, vertical transmission, and particle size p0073 A82-21386
SNOW
Optical properties of snow p0101 A82-21922
Orbital performance of a 1.6 micrometer DMSP snow/cloud discrimination sensor p0130 A82-27653
Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601
Dielectric properties of snow [NASA-CR-166764] p0107 N82-19638
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data [AD-A108881] p0120 N82-19788
SNOW COVER
Microwave radiation from a natural snow field p0101 A82-19559
Theoretical and experimental studies of microwave emission signatures of snow p0125 A82-21034
Towards the definition of optimum sensor specifications for microwave remote sensing of snow p0125 A82-21035
Use of GOES and TIROS/NOAA satellite data for snow-cover mapping p0101 A82-22146
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs p0102 A82-27462
The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463
Evaluation of snow-cover pollution in industrial regions using satellite TV images p0103 A82-27464
Albedo and brightness coefficients of snow cover p0103 A82-27465
Snow cover monitoring using AVHRR data from TIROS and NOAA satellites --- Advanced Very High Resolution Radiometer p0105 A82-27614
Spectral albedos of midlatitude snowpacks [NASA-TM-83858] p0106 N82-18663
Active microwave investigation of snowpacks. Experimental documentation, Colorado 1979-1980 [NASA-CR-166727] p0107 N82-19646
Applications systems verification and transfer project. Volume 1: Operational applications of satellite snow cover observations. Executive summary --- usefulness of satellite snow-cover data for water yield prediction [NASA-TP-1822] p0108 N82-20617
Applications systems verification and transfer project. Volume 2: Operational applications of satellite snow-cover observations and data-collection systems in the Arizona test site [NASA-TP-1823] p0108 N82-20618
Applications systems verification and transfer project. Volume 3: Operational applications of satellite snow cover observations in California [NASA-TP-1824] p0108 N82-20619
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations: Colorado Field Test Center [NASA-TP-1825] p0108 N82-20620
Applications systems verification and transfer project. Volume 5: Operational applications of satellite snow-cover observations, northwest United States [NASA-TP-1826] p0109 N82-20621
Applications systems verification and transfer project. Volume 6: Operational applications of satellite snow-cover observations NOAA/NESS support study [NASA-TP-1827] p0109 N82-20622
Applications systems verification and transfer project. Volume 7: Cost/benefit analysis for the ASVT on operational applications of satellite snow-cover observations [NASA-TP-1828] p0109 N82-20623
Applications systems verification and transfer project. Volume 8: Satellite snow mapping and runoff prediction handbook [NASA-TP-1829] p0109 N82-20624
Strategies for using remotely sensed data in hydrologic models [E82-10156] p0109 N82-21680
SOIL EROSION
The potential of remote sensing to monitor soil erosion on cropland p0061 A82-27656
SOIL MAPPING
A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143
The spectral reflectance of certain soils --- Russian book p0059 A82-26577

Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images p0076 A82-27690

Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements p0131 A82-28142

Delineation of soil temperature regimes from HCMM data [E82-10042] p0119 N82-19617

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur [E82-10058] p0065 N82-19633

Methodology of the interpretation of remote sensing data and applications in pedology [INPE-2211-MD/008] p0078 N82-19641

Amazonas project Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil [E82-10069] p0078 N82-20592

Delineation of soil temperature regimes from HCMM data [E82-10141] p0070 N82-21668

SOIL MOISTURE

Soil moisture determination - Experiments with passive microwave radiometers p0057 A82-19529

The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026

Microwave radiometry of lands under natural and artificial moistening p0057 A82-21028

Mixture formulas applied in estimation of dielectric and radiative characteristics of soils and grounds at microwave frequencies p0058 A82-21030

Volumetric effects in cross-polarized airborne radar data p0058 A82-21032

The estimation of the surface moisture of a vegetated soil using aerial infrared photography p0058 A82-21093

HCMM detection of high soil moisture areas --- by diurnal temperature observation p0059 A82-24963

The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458

Remote-sensing functions in the interpretation of moisture from aerial and space images p0102 A82-27459

Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements p0131 A82-28142

Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD p0077 A82-28295

Mission definition for a large-aperture microwave radiometer spacecraft p0131 N82-16155

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation [E82-10029] p0063 N82-16447

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual [E82-10031] p0064 N82-19607

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida [E82-10040] p0064 N82-19615

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements [E82-10048] p0120 N82-19623

AgRISTARS Soil moisture/early warning and crop condition assessment Interface control document [E82-10053] p0065 N82-19628

AgRISTARS Yield model development/soil moisture. Interface control document [E82-10054] p0065 N82-19629

Agricultural soil moisture experiment, Colby, Kansas 1978 Measured and predicted hydrological properties of the soil [E82-10057] p0065 N82-19632

Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia [E82-10064] p0108 N82-20587

Heat Capacity Mapping Mission (HCMM) Interpretation of imagery over Canada [E82-10070] p0079 N82-20593

Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed [E82-10074] p0067 N82-20597

Ground registration of data from an airborne scatterometer [E82-10084] p0068 N82-21636

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models [E82-10086] p0122 N82-21638

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana [E82-10105] p0068 N82-21647

Sonora exploratory study for the detection of wheat-leaf rust [E82-10133] p0070 N82-21661

HCMM Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau [E82-10135] p0092 N82-21662

A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri [E82-10140] p0079 N82-21667

Strategies for using remotely sensed data in hydrologic models [E82-10156] p0109 N82-21680

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin [E82-10157] p0071 N82-21681

SOILS

Landsat feature enhancement - Or, can we separate vegetation from soil p0060 A82-27622

An experiment in probabilistic relaxation for terrain cover classification of Kuwait from Landsat imagery p0062 A82-27680

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur [E82-10058] p0065 N82-19633

Notes for Brazil sampling frame evaluation trip [E82-10060] p0066 N82-19635

The effect of finite field size on classification and atmospheric correction [NASA-TM-83818] p0120 N82-19645

On the accuracy of thermal inertia mapping by infrared imagery [SAAB-REPR-AE-10] p0120 N82-19656

Delineation of soil temperature regimes from HCMM data [E82-10141] p0070 N82-21668

SOLAR POSITION

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841

Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction [E82-10144] p0071 N82-21671

SONIC ANEMOMETERS

Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

SOUTH AMERICA

Remote sensing in Latin America Technology and markets for the 1980's [AD-A108784] p0138 N82-20626

SOUTH CAROLINA

Multiresource inventory methods pilot test --- for forests p0060 A82-27601

Forest change detection p0061 A82-27644

SOUTH DAKOTA

Use of Landsat imagery to delineate glaciofluvial aquifers in southeast South Dakota p0105 A82-27637

Remote sensing applications to resource problems in South Dakota [E82-10027] p0132 N82-16445

SOUTHEAST ASIA

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

SOUTHERN CALIFORNIA

Analysis of two Seasat synthetic aperture radar images of an urban scene p0074 A82-25452

Scene analysis for wildland fire-fuel characteristics in a Mediterranean climate p0060 A82-27624

Ship and satellite bio-optical research in the California Bight [NASA-CR-168681] p0098 N82-20823

SOYBEANS

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

Crop area estimates using ground-gathered and Landsat data A multitemporal approach p0062 A82-27676

Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153

AgRISTARS Foreign commodity production forecasting Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments [E82-10039] p0064 N82-19614

AgRISTARS Foreign commodity production forecasting Corn/soybean decision logic development and testing [E82-10056] p0065 N82-19631

Notes for Brazil sampling frame evaluation trip [E82-10060] p0066 N82-19635

Segment-level evaluation of the simulated aggregation test US corn and soybean exploratory experiment [E82-10061] p0066 N82-19636

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation [E82-10067] p0066 N82-20590

US corn and soybeans exploratory experiment [E82-10088] p0068 N82-21640

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana [E82-10105] p0068 N82-21647

The 1981 Argentina ground data collection [E82-10127] p0070 N82-21656

Spectral-agronomic relationships of corn, soybean and wheat canopies [E82-10143] p0070 N82-21670

Variability of reflectance measurements with sensor altitude and canopy type [E82-10145] p0071 N82-21672

Determination of the optimal level for combining area and yield estimates [E82-10146] p0071 N82-21673

SPACE SHUTTLES

Advanced aerospace remote sensing systems for global resource applications p0127 A82-27577

SPACEBORNE PHOTOGRAPHY

Analytical triangulation of space photography p0111 A82-20402

Satellite Earth resources data, module U-3 [E82-10035] p0119 N82-19611

SPACECRAFT PERFORMANCE

LANDSAT-2 and LANDSAT-3 flight evaluation report, 23 January to 23 July 1980 [E82-10022] p0132 N82-16440

SPACELAB PAYLOADS

MRSE A Microwave Remote Sensing Experiment in Spacelab p0134 N82-20375

SPATIAL DISTRIBUTION

Use of GOES and TIROS/NOAA satellite data for snow-cover mapping p0101 A82-22145

Stochastic models of cover class dynamics --- remote sensing of vegetation p0059 A82-27586

Data base requirements in support of crop models p0060 A82-27588

Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping p0129 A82-27648

Sea ice movements from synthetic aperture radar [AD-A109002] p0097 N82-19435

Recommended data sets, corn segments and spring wheat segments, for use in program development [E82-10034] p0064 N82-19610

AgRISTARS Early warning and crop condition assessment Patch image processor user's manual [E82-10055] p0065 N82-19630

Methodology of the interpretation of remote sensing data and applications in geomorphology [INPE-2209-MD/007] p0081 N82-19642

An algorithm for spatial heirarchy clustering [E82-10081] p0121 N82-20604

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota [E82-10083] p0068 N82-21635

SPATIAL FILTERING

Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596

SPATIAL RESOLUTION

Spatial reasoning in remotely sensed data p0105 A82-27592

An evaluation of the utility of smaller Landsat resolution elements /Resolution of Landsat resolution/ p0114 A82-27625

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665

Spatial resolution and geometric potential of planned earth satellite missions p0130 A82-27683

Characterizing user requirements for future land observing satellites [NASA-TM-83867] p0081 N82-17562

SPECTRAL BANDS

Characterizing user requirements for future land observing satellites [NASA-TM-83867] p0081 N82-17562

A multiband radiometer and data acquisition system for remote sensing field research [E82-10142] p0134 N82-21669

SPECTRAL CORRELATION

Remote SO2 emission measurements with correlation spectrometers from volcanoes p0077 A82-27704

SPECTRAL EMISSION

Methods of editing cloud and atmospheric layer affected pixels from satellite data [E82-10046] p0119 N82-19621

SPECTRAL RECONNAISSANCE

Watershed model study using LANDSAT data p0106 N82-17602

SPECTRAL REFLECTANCE

The estimation of the surface moisture of a vegetated soil using aerial infrared photography p0058 A82-21093

Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144

Spectral reflectance of hydrophytes p0102 A82-24960

Influence of illumination and viewing geometry and atmospheric composition on the tasseled cap transformation of Landsat MSS data p0059 A82-24961

The spectral reflectance of certain soils --- Russian book p0059 A82-26577

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle p0114 A82-26841

Radiometric calibration of the Coastal Zone Color Scanner on Nimbus 7 - A proposed adjustment p0127 A82-26963

Albedo and brightness coefficients of snow cover p0103 A82-27465

Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473

Spectrometric studies of the water composition of Lake Mueggelsee p0104 A82-27474

A data base of geologic field spectra p0090 A82-27600

Dew and vapor pressure as complicating factors in the interpretation of spectral radiance from crops p0060 A82-27617

Landsat feature enhancement - Or, can we seperate vegetation from soil p0060 A82-27622

An approach to path radiance correction in MSS images p0115 A82-27629

Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0129 A82-27642

A vegetation response model applied to range inventory and monitoring using Landsat MSS data p0060 A82-27643

The influence of illumination and viewing geometry on the reflectance factor of agricultural targets p0061 A82-27646

Instrumentation for remote reflectance and radiance measurements p0130 A82-27652

An invertible coniferous forest canopy reflectance model p0062 A82-27679

Ground level reflectance measurement techniques - An evaluation with emphasis on the importance of spectral calibration p0116 A82-27689

Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601

Spectral albedos of midlatitude snowpacks
[NASA-TM-83858] p0106 N82-18663

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10048] p0119 N82-19821

Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20591

As-built design specification for PARHIS
[E82-10089] p0122 N82-21641

Soybean canopy reflectance as influenced by cultural practices --- West Lafayette, Indiana
[E82-10105] p0068 N82-21647

Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670

Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671

Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672

Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters
[NASA-TP-1993] p0110 N82-21774

SPECTRAL RESOLUTION

Digital analysis of spatial and spectral features from airborne MSS of a forested region p0061 A82-27647

SPECTRAL SENSITIVITY

Landsat thermal imaging of alpine regions p0079 A82-22147

Imaging the earth. I - The troubled first decade of Landsat p0137 A82-27169

Technologies for the multispectral mapping of earth resources p0128 A82-27580

SPECTRAL SIGNATURES

Environmental studies by multispectral scanner under large-scale civil engineering construction p0063 A82-27691

Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10075] p0081 N82-16443

Thermal vegetation canopy model studies
[AD-A106422] p0084 N82-16455

AgRISTARS. Soil moisture/early warning and crop condition assessment. Interface control document
[E82-10053] p0065 N82-19628

Data rate reduction. Impact of image data compression on end to end data management of a multispectral payload --- for satellite imagery
[REPT-44/130] p0120 N82-19654

AgRISTARS. Foreign commodity production forecasting. Project test reports document, volume 1 --- using North Dakota, South Dakota, Montana, and Minnesota
[E82-10087] p0068 N82-21639

Transition year labeling error characterization study --- Kansas, Minnesota, Montana, North Dakota, South Dakota and Oklahoma
[E82-10111] p0069 N82-21651

AgRISTARS. Supporting research. Classification of corn. Badhwar profile similarity technique --- us corn belt
[E82-10150] p0071 N82-21676

SPECTROMETERS

Instrumentation for remote reflectance and radiance measurements p0130 A82-27652

SPECTROPHOTOMETERS

Stratospheric instruments and analyses p0133 N82-18776

SPECTROSCOPY

Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4 p0073 A82-19326

SPECTRUM ANALYSIS

MAGSAT anomaly profiles of the eastern Indian Ocean
[E82-10066] p0086 N82-20589

Direct determination of the two dimensional image spectrum from raw synthetic aperture radar data p0122 N82-21474

SPECULAR REFLECTION

Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance p0112 A82-20423

SPHERICAL HARMONICS

Some new methods in geomagnetic field modeling applied to the 1960 - 1980 epoch
[NASA-TM-83868] p0083 N82-17714

SPOT (FRENCH SATELLITE)

Towards an operational SPOT system - A preliminary assessment --- earth observation satellites for resources management p0114 A82-27607

The potential of remote sensing to monitor soil erosion on cropland p0061 A82-27656

STANDARDS

Project communications/documentation standards manual
[E82-10083] p0068 N82-21645

STATIONKEEPING

Topex orbit sustenance maneuver design --- Ocean Topography Experiment spacecraft
[AIAA PAPER 82-0202] p0094 A82-27091

STATISTICAL ANALYSIS

Multispectral texture p0113 A82-25139

Using known map category marginal frequencies to improve estimates of thematic map accuracy p0113 A82-25456

An experiment in probabilistic relaxation for terrain cover classification of Kuwait from Landsat imagery p0062 A82-27680

Surface wave statistics and spectra during high sea state conditions in the North Atlantic
[AD-A109832] p0098 N82-20827

STEPPES

Landscape mapping and physical-geographical classification of the eastern part of the Chechen-Ingush, ASSR using space imagery p0073 A82-20339

STEREOPHOTOGRAPHY

Calibration and model reconstruction in analytical close-range stereophotogrammetry. I - Mathematical fundamentals p0111 A82-20403

Calibration and model reconstruction in analytical close-range stereophotogrammetry. II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

STOCHASTIC PROCESSES

Stochastic models of cover class dynamics --- remote sensing of vegetation p0059 A82-27586

STRATIFICATION

Techniques for combining Landsat and ancillary data for digital classification improvement p0111 A82-20410

Notes for Brazil sampling frame evaluation trip
[E82-10060] p0066 N82-19635

Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590

Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

STRATIGRAPHY

One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India p0089 A82-26017

Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635

STRATOSPHERE

Mid-latitude summertime measurements of stratospheric NO2 p0074 A82-25149

Multidimensional aspects. Ozone, temperature and transport p0081 N82-18772

Stratospheric instruments and analyses p0133 N82-18776

STRIP MINING

Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19609

STRUCTURAL PROPERTIES (GEOLOGY)

The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341

Dip determinations in photogeology p0089 A82-25453

A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016

One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India p0089 A82-26017

Application of aerial and space photographic data in the study of subsurface water and tectonic structures p0090 A82-27466

Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611

Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635

Ring structures in the earth's crust, and their significance for geology and methods for their investigation p0091 A82-28136

Report on a short course in remote sensing and the geological applications of LANDSAT MSS imagery at INPE
[E82-10024] p0091 N82-16442

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] p0091 N82-16446

HCMM. Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau
[E82-10135] p0092 N82-21662

Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10147] p0087 N82-21674

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10152] p0092 N82-21677

SUBARCTIC REGIONS

Enhancement of Landsat data for Hudson Bay lowlands vegetation p0114 A82-27623

SUBURBAN AREAS

A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683

SUGAR CANE

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state, Brazil p0058 A82-21092

Survey of the cane-growing area of the state of Sao Paulo using LANDSAT data, Safra Year 1979/80, volume 2 --- maps, Brazil
[E82-10071] p0067 N82-20594

Elevation of a cane-growing area of the state of Sao Paulo using LANDSAT data
[E82-10077] p0067 N82-20600

SULFUR DIOXIDES

A regional air quality model for the Kwinana industrial area of Western Australia p0075 A82-26403

Remote SO2 emission measurements with correlation spectrometers from volcanoes p0077 A82-27704

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] p0066 N82-19715

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] p0066 N82-19716

SULFURIC ACID

Airborne in-situ measurement of particulate sulfur and sulfuric acid with flame photometry and thermal analysis p0073 A82-20999

SUMMER

Diurnal variation of summer convection over West Africa and the Tropical Eastern Atlantic during 1974 and 1978 p0075 A82-26700

SUNLIGHT

Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645

SUPERCONDUCTIVITY

Superconducting tensor gravity gradiometer p0126 A82-23045

SURFACE LAYERS

On randomly absorbing and scattering surface layers p0079 A82-21037

SURFACE NAVIGATION

Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] p0096 N82-17566

Experiments in satellite Doppler control positioning at sea p0086 N82-20581

SURFACE ROUGHNESS

Volumetric effects in cross-polarized airborne radar data p0068 A82-21032

A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038

Comparison of sigma/deg/ obtained from the conventional definition with sigma/deg/ appearing in the radar equation for randomly rough surfaces p0112 A82-21039

Comparisons of laser profilometer sea ice roughness statistics with surface truthed data and SLAR imagery p0094 A82-27619

Coherent scatter of microwaves from moderately rough surfaces
[AD-A106133] p0095 N82-16331

A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri
[E82-10140] p0079 N82-21667

SURFACE TEMPERATURE

Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063

Thermal infrared data from the Heat Capacity Mapping Mission p0127 A82-24964

Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627

High precision radiometric temperature measurements of the ocean surface p0094 A82-27640

Estimation of sea surface temperature from remote sensing in the 3 7 micron window region p0095 A82-28031

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] p0064 N82-19615

Delineation of soil temperature regimes from HCMM data
[E82-10042] p0119 N82-19617

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] p0120 N82-19623

On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] p0120 N82-19656

The TOCIND experiment --- relation between surface isotherms and ocean currents
[CTAMN/81/R/10] p0098 N82-19805

HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586

Heat Capacity Mapping Mission (HCMM) Interpretation of imagery over Canada
[E82-10070] p0079 N82-20593

Heat Capacity Mapping Mission (HCMM) program Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei
[E82-10073] p0091 N82-20596

Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597

Delineation of soil temperature regimes from HCMM data
[E82-10141] p0070 N82-21668

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683

A study of model parameters associated with the urban climate using HCMM data --- analysis of St Louis, Missouri infrared imagery
[E82-10160] p0080 N82-21684

Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

SURFACE WATER

The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458

Interpretation of Heat Capacity Mapping Mission images over Canada p0116 A82-27671

Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10154] p0123 N82-21678

Strategies for using remotely sensed data in hydrologic models
[E82-10156] p0109 N82-21680

SURFACE WAVES

Surface wave statistics and spectra during high sea state conditions in the North Atlantic
[AD-A108832] p0098 N82-20827

SWEDEN

Mapping of water quality using Landsat imagery p0106 A82-27692

Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

SWITZERLAND

Soil moisture determination - Experiments with passive microwave radiometers p0057 A82-19529

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

SYNOPTIC METEOROLOGY

Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 A82-19177

SYNTHETIC APERTURE RADAR

Classification of ice radar imagery p0113 A82-22891

Methods for the processing of synthetic-aperture radar signals when solving problems of the national economy /Review/ p0113 A82-26726

Spaceborne radar observation of the earth surface p0127 A82-27578

Overview of digital processing of SAR data --- from Seasat-A p0128 A82-27589

Simulation and studies of spaceborne synthetic aperture radar image quality with reduced bit rate p0128 A82-27594

Features of a generalized digital Synthetic Aperture Radar processor p0128 A82-27595

Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596

Wide area, coarse resolution imaging with satellite-borne synthetic aperture radars in low-earth and geosynchronous orbits p0082 A82-27631

Seasat satellite investigation of the structure of Western Nebraska and its application to the evaluation of geothermal resources p0090 A82-27635

The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675

Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452

The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] p0096 N82-17798

Study of synthetic aperture radar in 2D - 2FS operation over the ocean --- European Remote Sensing system
[ESA-CR(P)-1475] p0132 N82-18481

Sea ice movements from synthetic aperture radar
[AD-A109002] p0097 N82-19435

MRSE A Microwave Remote Sensing Experiment in Spacelab p0134 N82-20375

SAR image quality --- conference, Frascati, Italy, 11-12 Dec 1980, synthetic aperture radar (SAR)
[ESA-SP-172] p0122 N82-21458

Two-dimensional power spectra of SEASAT SAR imagery --- ocean waves p0098 N82-21469

Direct determination of the two dimensional image spectrum from raw synthetic aperture radar data p0122 N82-21474

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

SYSTEMS ANALYSIS

CNPq/INPE LANDSAT system --- operations at the Cuiabe station and the electronic processing and photo laboratories
[E82-10023] p0118 N82-16441

SYSTEMS INTEGRATION

Flexible processing of remote sensing data through integration of image processing and geobased information systems p0116 A82-27667

T

TAXONOMY

Taxonomic classification of world map units in crop producing areas of Argentina and Brazil with representative US soil series and major land resource areas in which they occur
[E82-10058] p0065 N82-19633

TECHNOLOGY TRANSFER

Remote sensing in Latin America Technology and markets for the 1980's
[AD-A108784] p0138 N82-20626

TECHNOLOGY UTILIZATION

Some problems concerning the effective use of remote sensing p0137 A82-26123

Earth sensing from space - Commercial and international aspects p0138 A82-27669

Remote sensing procurement package A management report for state and local governments
[E82-10052] p0138 N82-19627

Program on stimulating operational private sector use of Earth observation satellite information
[E82-10131] p0138 N82-21660

TECTONICS

A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

The Pampean Plain studied with Landsat images p0089 A82-26013

Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/ p0089 A82-26014

Geophysical and Landsat lineament mapping - An approach illustrated from west-central and south India p0089 A82-26016

One orogenic belt or two - A structural reinterpretation supported by Landsat data products of the Precambrian metamorphics of Singhbhum, eastern India p0089 A82-26017

Application of aerial and space photographic data in the study of subsurface water and tectonic structures p0090 A82-27466

MAGSAT anomaly profiles of the eastern Indian Ocean
[E82-10066] p0086 N82-20589

TELLURIC CURRENTS

Electromagnetic deep-probing (100-1000 KMS) of the Earth's interior from artificial satellites Constraints on the regional emplacement of crustal resources
[E82-10155] p0087 N82-21679

TEMPERATE REGIONS

Spectral albedos of midlatitude snowpacks
[NASA-TM-83858] p0106 N82-18663

Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824

TEMPORAL DISTRIBUTION

Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

Field-by-field multitemporal analysis of aerial scanner data geometrically corrected by means of a sliding model p0115 A82-27651

Crop area estimates using ground-gathered and Landsat data A multitemporal approach p0062 A82-27676

TENNESSEE

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
[NASA-TM-82163] p0084 N82-17715

TENNESSEE VALLEY (AL-KY-TN)

National High-Altitude Photography (NHAP) of the Tennessee Valley Region, volume 1, no 1
[PB82-130899] p0134 N82-21703

TERRAIN

Precision in the evaluation of Landsat autocorrelation - The terrain effect p0116 A82-27686

Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

TERRAIN ANALYSIS

The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409

Remote sensing of the structure of taiga landscapes --- Russian book p0059 A82-27397

Airborne laser systems use in terrain mapping p0082 A82-27584

Spatial reasoning in remotely sensed data p0105 A82-27592

The use of digital terrain model in the rectification of satellite-borne imagery p0115 A82-27626

Locating prehistoric archaeological sites using Landsat p0129 A82-27638

Non-parametric classification of abandoned coal mine features using multioriented and ratio transformed Landsat data p0090 A82-27694

Utilisation of remote sensing in resources identification and land use in India - An integrated approach p0076 A82-27701

Construction of digital models of statistically uniform characteristics on the basis of multispectral space imagery p0117 A82-28144

Classification of systems for digital terrain simulation p0117 A82-28468

Matrix data analysis Color/B and W coding is not always enough
[AD-A108406] p0084 N82-18930

Profiling sensitivity to image quality
[AD-A108405] p0084 N82-18931

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] p0119 N82-19613

Relief effects and the use of terrain models in SAR image processing --- Anderson River test site, British Columbia p0086 N82-21475

TERRESTRIAL RADIATION

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] p0119 N82-19621

TEXAS

Assessing mesquite-grass vegetation condition from Landsat p0059 A82-25457

Methods of editing cloud and atmospheric layer affected pixels from satellite data
[E82-10046] p0119 N82-19621

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

A gradient model of vegetation and climate utilizing NOAA satellite imagery Phase 1 Texas transect
[E82-10107] p0069 N82-21648

TEXTURES

Automation of the processing of aerial and space images for forest inventory p0057 A82-20350

Multispectral texture p0113 A82-25139

THAILAND

Monitoring forest land cover alteration in Thailand with the analysis of ancillary and digital Landsat data p0062 A82-27673

THEMATIC MAPPING

Analysis of space imagery to compile a geomorphological map of the world p0089 A82-20338

Landscape mapping and physical-geographical classification of the eastern part of the Chechen-Ingush ASSR using space imagery p0073 A82-20339

The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409

Sampling for thematic map accuracy testing p0111 A82-20411

Landsat classification accuracy assessment procedures p0137 A82-20412

Use of Landsat data for automatic classification and area estimation of sugar-cane plantation in Sao Paulo state, Brazil p0058 A82-21092

The Landsat program - Moving ahead p0137 A82-21280

Remote sensing for natural resources: An international view of problems, promises and accomplishments --- Book p0137 A82-21875

Use of GOES and TIROS/NOAA satellite data for snow-cover mapping p0101 A82-22145

Using known map category marginal frequencies to improve estimates of thematic map accuracy p0113 A82-25456

Imaging the earth. I - The troubled first decade of Landsat p0137 A82-27169

Evaluation of the state of crops from satellite data p0059 A82-27393

Investigation of the earth on the basis of space photographic data p0082 A82-27507

International Symposium on Remote Sensing of Environment, 15th, University of Michigan, Ann Arbor, MI, May 11-15, 1981, Proceedings. Volumes 1, 2 & 3 p0127 A82-27576

Advanced aerospace remote sensing systems for global resource applications p0127 A82-27577

Information expectations from Landsat-D p0128 A82-27583

Utilization of spatial complexity in computer classified Landsat MSS data for multi-factoral thematic mapping p0129 A82-27648

The potential of remote sensing to monitor soil erosion on cropland p0061 A82-27656

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

ELAS - A geobased information system that is transferable to several computers --- Earth resources Laboratory Applications Software p0115 A82-27666

Integration of Landsat, geological and geophysical data for use in thematic mapping at regional scale p0090 A82-27672

Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677

An analysis of user requirements for operational land satellite data p0116 A82-27685

Natural resources inventories by computer-satellite mapping techniques in Chaco State, Argentine Republic, South America p0116 A82-27688

Mapping of water quality using Landsat imagery p0106 A82-27692

Utilisation of remote sensing in resources identification and land use in India - An integrated approach p0076 A82-27701

Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery p0131 A82-28130

The use of space photographs to compile water-amelioration maps p0106 A82-28137

Possibilities of using experience gained from the thematic mapping of the moon in studies of earth resources by remote sensing methods p0083 A82-28138

Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia p0083 A82-28139

Earth-scanning satellites lead resource hunt p0117 A82-28343

Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin [E82-10019] p0118 N82-16437

A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy [E82-10038] p0119 N82-19613

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil [INPE-2197-PRE/006] p0066 N82-19639

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary [PB82-115122] p0066 N82-19715

Atlas of the global distribution of the total ozone concentration according to satellite measurements [MITT-28] p0078 N82-19740

The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil [E82-10065] p0078 N82-20588

Amazonas project: Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil [E82-10069] p0078 N82-20592

Survey of the cane-growing area of the state of Sao Paulo using LANDSAT data. Safra Year 1979/80, volume 2 --- maps, Brazil [E82-10071] p0067 N82-20594

Elevation of a cane-growing area of the state of Sao Paulo using LANDSAT data [E82-10077] p0067 N82-20600

THERMAL MAPPING

Thermal viewing system for studying the earth's resources p0125 A82-21022

Registration of heat capacity mapping mission day and night images p0113 A82-22146

Landsat thermal imaging of alpine regions p0079 A82-22147

HCMM detection of high soil moisture areas --- by diurnal temperature observation p0059 A82-24963

Thermal infrared data from the Heat Capacity Mapping Mission p0127 A82-24964

Humidity measurement by infrared thermometry p0075 A82-26844

Advanced aerospace remote sensing systems for global resource applications p0127 A82-27577

Analysis of a discrete-time linear model for geothermal flux reconnaissance from two or three aircraft infrared measurements p0075 A82-27627

HCMM night-time thermal IR imaging experiment in Michigan --- Heat Capacity Mapping Mission p0115 A82-27655

Thermal IR detection of submarine gas seepages in the western Istra off-shore area /Yugoslavia/ p0076 A82-27661

Interpretation of Heat Capacity Mapping Mission images over Canada p0116 A82-27671

Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0117 A82-27693

Visual and digital analysis of H.C.M.M. data over eastern Canada --- thermal imagery by Heat Capacity Mapping Mission p0117 A82-27698

Development of a Canadian thermal infrared forest fire mapping operational program p0063 A82-27699

Thermal vegetation canopy model studies [AD-A106422] p0064 N82-16455

The severity of the Brazilian freeze of July 1981, as monitored by satellite [INPE-2231-RPE/399] p0064 N82-17746

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida [E82-10040] p0064 N82-19615

Delineation of soil temperature regimes from HCMM data [E82-10042] p0119 N82-19617

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements [E82-10048] p0120 N82-19623

Method of interpretation of remote sensing data and applications to vegetation [INPE-2215-MD/010] p0066 N82-19640

On the accuracy of thermal inertia mapping by infrared imagery [SAAB-REPR-AE-10] p0120 N82-19656

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data [INPE-2229-PRE/021] p0097 N82-19704

The TOCIND experiment --- relation between surface isotherms and ocean currents [CTAMN/81/R/10] p0098 N82-19805

HCMM hydrological analysis in Utah --- Utah lake [E82-10063] p0107 N82-20586

Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia [E82-10064] p0108 N82-20587

Heat Capacity Mapping Mission (HCMM): Interpretation of imagery over Canada [E82-10070] p0079 N82-20593

Heat Capacity Mapping Mission (HCMM) program: Study of geological structure of Sicily and other Italian areas --- Sardinia and the Gulf of Orosei [E82-10073] p0091 N82-20596

Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed [E82-10074] p0067 N82-20597

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida [NASA-CR-168827] p0121 N82-20607

Application of satellite frost forecast technology to other parts of the United States, phase 2, introduction p0121 N82-20608

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

HCMM: Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau [E82-10135] p0092 N82-21662

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10137] p0092 N82-21664

A study of model parameters associated with the urban climate using HCMM data --- St. Louis, Missouri [E82-10140] p0079 N82-21667

Delineation of soil temperature regimes from HCMM data [E82-10141] p0070 N82-21668

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin [E82-10157] p0071 N82-21681

A study of model parameters associated with the urban climate using HCMM data [E82-10159] p0080 N82-21683

Applications of HCMM satellite data to the study of urban heating patterns [E82-10161] p0080 N82-21685

Cloud Top Scanning radiometer (CTS): User's guide [NASA-TM-83887] p0135 N82-21826

THERMAL POLLUTION

Monitoring of the thermal pollution of natural channels of water using infrared aerial photography p0104 A82-27471

Preliminary results of a study of mapping thermal discharge in the ocean, using remote sensing data [INPE-2229-PRE/021] p0097 N82-19704

TIDAL FLATS

Evaluation of aerial photogrammetric camera and aircraft scanner pictures from tidal lands - Digital correlation and classification of multitemporal imagery data p0127 A82-26049

TIDES

Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia [E82-10064] p0108 N82-20587

TIMBER IDENTIFICATION

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Fanning - A classification algorithm for mixture landscapes applied to Landsat data of Maine forests p0062 A82-27668

Thermal vegetation canopy model studies [AD-A106422] p0064 N82-16455

TIMBER INVENTORY

Automation of the processing of aerial and space images for forest inventory p0057 A82-20350

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Multiresource inventory methods pilot test --- for forests p0060 A82-27601

Potential utility of thematic mapper data in estimating crop areas p0061 A82-27663

Monitoring forest land cover alteration in Thailand with the analysis of ancillary and digital Landsat data p0062 A82-27673

An invertible coniferous forest canopy reflectance model p0062 A82-27679

Method of interpretation of remote sensing data and applications to vegetation [INPE-2215-MD/010] p0066 N82-19640

Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979 --- Mato Grosso do Sul, Brazil [E82-10078] p0067 N82-20601

San Juan National Forest Land Management Planning Support System (LMPSS) requirements definition [E82-10108] p0069 N82-21649

TIMBER VIGOR

A system for quantitative determination of species and vitalities of urban trees on color-infrared photographs p0074 A82-24958

Environmental studies by multispectral scanner under large-scale civil engineering construction p0063 A82-27691

Remote sensing applications to resource problems in South Dakota [E82-10027] p0132 N82-16445

TOMOGRAPHY

Model studies of laser absorption computed tomography for remote air pollution measurement p0077 A82-28152

TOPEX

Topex orbit sustenance maneuver design --- Ocean Topography Experiment spacecraft [AIAA PAPER 82-0202] p0094 A82-27091

TOPOGRAPHY

Calibration and model reconstruction in analytical close-range stereophotogrammetry. II - Special evaluation procedures for rasterstereography and moire topography p0126 A82-22141

Landsat thermal imaging of alpine regions p0079 A82-22147

A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

Area determination by means of the method of finite elements p0082 A82-26048

Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image p0082 A82-26843

Airborne laser systems use in terrain mapping p0082 A82-27584

Application of side-looking color infrared photography for structure detection in subtle topography p0082 A82-27611

Topographic mapping using Landsat data p0082 A82-27615

A shuttle scanning laser altimeter for topographic mapping p0083 A82-27632

Spatial resolution and geometric potential of planned earth satellite missions p0130 A82-27683

Coherent scatter of microwaves from moderately rough surfaces [AD-A106133] p0095 N82-16331

Matrix data analysis: Color/B and W coding is not always enough [AD-A108406] p0084 N82-18930

Profiling sensitivity to image quality [AD-A108405] p0084 N82-18931

Methodology of the interpretation of remote sensing data and applications in pedology
[INPE-2211-MD/008] p0078 N82-19641
Heat Capacity Mapping Mission (HCMM) Interpretation of imagery over Canada
[E82-10070] p0079 N82-20593
Observation of the Earth by radar
[NASA-TM-76830] p0124 N82-21687
Some altimetric signatures from Seasat over the mid-Pacific Seamount Range
[AD-A110419] p0099 N82-21691

TRANSFER FUNCTIONS
Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596

TRANSPORT PROPERTIES
Multidimensional aspects Ozone, temperature and transport p0081 N82-18772

TREES (PLANTS)
Remote sensing of sulfur dioxide effects on vegetation Volume 1 Summary
[PB82-115122] p0066 N82-19715

TRIANGULATION
Analytical triangulation of space photography p0111 A82-20402
The diagnosis settlement 1980 of the German main triangulation network Part 2 Trajectories
[SER-B-253-MITT-159-PT-2] p0085 N82-19648

TROPICAL METEOROLOGY
Diurnal variation of summer convection over West Africa and the Tropical Eastern Atlantic during 1974 and 1978 p0075 A82-26700
Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data p0075 A82-26980

TROPICAL REGIONS
Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407
An airphoto key for major tropical crops p0058 A82-22142
Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution p0063 A82-27687
The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065] p0078 N82-20588
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824

TROPICAL STORMS
Seasat data utilization project
[NASA-CR-168557] p0097 N82-18660

TROPOSPHERE
The NASA participation in the 1980 EPA PEPE/NEROS field measurements program p0075 A82-26621

TURBIDITY
Inland water quality assessment from Landsat data p0105 A82-27610
Mapping of water quality using Landsat imagery p0106 A82-27692
LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] p0098 N82-19802

TURBULENT BOUNDARY LAYER
Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

TURKEY
The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341

TWO FLUID MODELS
Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0128 A82-27642

TYPHOONS
A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674

U

U.S.S.R.
Landscape mapping and physical-geographical classification of the eastern part of the Chechen-Ingush ASSR using space imagery p0073 A82-20339
The relationship between seismicity and lineaments of the Anatolian-Caucasian-Iranian segment of the Mediterranean fold belt p0089 A82-20341
Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343
Experimental evaluation of methods of the automated interpretation of crops from a Fragment MSS image p0057 A82-20349
Evaluation of the state of crops from satellite data p0059 A82-27393
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs p0102 A82-27462
The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463
Evaluation of snow-cover pollution in industrial regions using satellite TV images p0103 A82-27464
Albedo and brightness coefficients of snow cover p0103 A82-27465
Experience with a variety of studies of earth resources in the Kalmyk ASSR using space imagery p0131 A82-28130
Ring structures in the earth's crust, and their significance for geology and methods for their investigation p0091 A82-28136
The use of space photographs to compile water-amelioration maps p0106 A82-28137
Sample selection in foreign similarity regions for multicrop experiments
[E82-10118] p0070 N82-21655

U.S.S.R. SPACE PROGRAM
Scientific lectures on aviation and astronautics 1980 --- Russian book p0137 A82-27501
Present and future studies of natural resources and the environment from space p0138 A82-27506
Investigation of the earth on the basis of space photographic data p0082 A82-27507
Development of cooperation between CMEA member countries in the development and utilization of space-based systems for the remote sensing of earth resources and the environment p0138 A82-27543
The earth resources program for the long-term orbital station Salyut 6 p0131 A82-28132

ULTRASONIC SCANNERS
Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

ULTRAVIOLET SPECTROMETERS
Remote SO2 emission measurements with correlation spectrometers from volcanoes p0077 A82-27704
Atlas of the global distribution of the total ozone concentration according to satellite measurements
[MITT-28] p0078 N82-19740

UNDERWATER ACOUSTICS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] p0096 N82-17566

UNDERWATER OPTICS
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] p0096 N82-17566

UNITED KINGDOM
The use of contextual information to improve land cover classification of digital remotely sensed data p0112 A82-21094

UNITED STATES OF AMERICA
AgRISTARS Interim catalog ground data summary, data acquisition year 1979
[E82-10032] p0064 N82-19608
Use of Magsat anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10049] p0091 N82-19624
Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida
[NASA-CR-166827] p0121 N82-20807
AgRISTARS Foreign commodity production forecasting Project test reports document, volume 1 --- using North Dakota, South Dakota, Montana, and Minnesota
[E82-10087] p0068 N82-21639
US corn and soybeans exploratory experiment
[E82-10088] p0068 N82-21640
Compatibility study of the MAGSAT data and aeromagnetic data
[E82-10136] p0123 N82-21663
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US midcontinent
[E82-10152] p0092 N82-21677

UPWELLING WATER
Influence of dissolved organic materials on turbid water optical properties and remote-sensing reflectance p0093 A82-20445
Coastal upwelling ecosystems analysis Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] p0097 N82-19796
Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters
[NASA-TP-1993] p0110 N82-21774

URBAN RESEARCH
An investigation of the ozone plume from a small city p0074 A82-26329
Resourceful decisions LANDAT in Michigan
[E82-10037] p0078 N82-19601
A study of model parameters associated with the urban climate using HCMM data --- St Louis, Missouri
[E82-10140] p0079 N82-21667
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

US.S.R. SPACE PROGRAM
The effectiveness of instrumented visual studies of the earth from space p0114 A82-27505

USER MANUALS (COMPUTER PROGRAMS)
Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] p0064 N82-19807
AgRISTARS Early warning and crop condition assessment Patch image processor user's manual
[E82-10055] p0065 N82-19630
As-Built design specification for UNIV4VEC
[E82-10085] p0122 N82-21637
As-built design specification for PARCLS
[E82-10090] p0123 N82-21642
As-built design specification for the CLASFYG program
[E82-10092] p0068 N82-21644
Wheat stress indicator model, Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652

USER REQUIREMENTS
Response of the marine community to satellite-derived oceanic information p0095 A82-27684
An analysis of user requirements for operational land satellite data p0116 A82-27685
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] p0081 N82-17562
Remote sensing procurement package A management report for state and local governments
[E82-10052] p0138 N82-19627
Future Earthnet Dissemination Systems (FEDS) study Executive summary --- remote sensing data transmission
[REPT-3318] p0124 N82-21698
Interpretation of remotely sensed image data and impact of cluster compression --- impact of cluster compression users
[REPT-44 2866] p0124 N82-21699

UTAH
Thermal infrared data from the Heat Capacity Mapping Mission p0127 A82-24964
HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586

V

VALLEYS
Spatial reasoning in remotely sensed data p0105 A82-27592
Land use in the Paraiba Valley through remotely sensed data --- Brazil
[E82-10072] p0079 N82-20595

VAPOR PRESSURE
Humidity measurement by infrared thermometry p0075 A82-26844

VECTOR ANALYSIS
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters p0118 N82-18656

VEGETATION
The use of digital multi-date Landsat imagery in terrain classification p0111 A82-20409
The Dutch ROVE program --- Radar Observation of VEgetation p0057 A82-21026
Microwave radiation peculiarities of vegetative covers p0058 A82-21029
Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959
Remote-sensing functions in the interpretation of moisture from aerial and space images p0102 A82-27459
Stochastic models of cover class dynamics --- remote sensing of vegetation p0059 A82-27586
An experiment in probabilistic relaxation for terrain cover classification of Kuwait from Landsat imagery p0062 A82-27680
Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] p0118 N82-16437
A comparison of unsupervised classification procedures on LANDSAT MSS data for an area of complex surface conditions in Basilicata, Southern Italy
[E82-10038] p0119 N82-19613
Method of interpretation of remote sensing data and applications to vegetation
[INPE-2215-MD/010] p0066 N82-19640
The utilization of orbital images as an adequate form of control of preserved areas --- Araguaia National Park, Brazil
[E82-10065] p0078 N82-20588
Amazonas project Application of remote sensing techniques for the integrated survey of natural resources in Amazonas --- Brazil
[E82-10069] p0078 N82-20592
A gradient model of vegetation and climate utilizing NOAA satellite imagery Phase 1 Texas transect
[E82-10107] p0069 N82-21648
A look at the commonly used LANDSAT vegetation indices
[E82-10123] p0070 N82-21657
HCMM Soil moisture in relation to geologic structure and lithology, northern California --- Northern Coast Range, Sacramento Valley, and the Modoc Plateau
[E82-10135] p0092 N82-21662

VEGETATION GROWTH
The use of contextual information to improve land cover classification of digital remotely sensed data p0112 A82-21094
Multispectral photographic remote sensing of green vegetation biomass and productivity p0059 A82-22144
Spectral reflectance of hydrophytes p0102 A82-24960

Assessing mesquite-grass vegetation condition from Landsat p0059 A82-25457
A vegetation response model applied to range inventory and monitoring using Landsat MSS data p0060 A82-27643
Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies --- Purdue Agronomy Farm, Indiana
[E82-10068] p0067 N82-20591

VENEZUELA
Mapping in tropical forests - A new approach using the laser APR --- Airborne Profile Recorder p0081 A82-20407
Strategies and uses of small distributed analysis centers as in the natural resource inventory of Venezuela p0115 A82-27636

VERTICAL DISTRIBUTION
Mid-latitude summertime measurements of stratospheric NO2 p0074 A82-25149

VERY LONG BASE INTERFEROMETRY
Session III of the VLBI/Laser intercomparison task of the NASA crustal dynamics project
[NASA-CR-168427] p0083 N82-17708
Applications to Earth physics. Very-long-baseline interferometry and data analysis
[NASA-CR-168743] p0088 N82-21796

VIETNAM
Applications of aircraft and satellite data for the study of archaeology and environment - Mekong Delta, Vietnam p0091 A82-27705

VIEW EFFECTS
Analysis of the direction-dependent radiation behavior in multispectral scanning data p0125 A82-21399
Influence of illumination and viewing geometry and atmospheric composition on the 'tasseled cap' transformation of Landsat MSS data p0059 A82-24961
Analysis of two Seasat synthetic aperture radar images of an urban scene p0074 A82-25452
Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645
The influence of illumination and viewing geometry on the reflectance factor of agricultural targets p0061 A82-27646
Ground level reflectance measurement techniques - An evaluation with emphasis on the importance of spectral calibration p0116 A82-27689
Geometric correction of airborne multispectral scanner images p0130 A82-27706
Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153
Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671
Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672

VIRGIN ISLANDS
Effect of aerosols on optical remotely sensed data p0115 A82-27654

VISUAL DISCRIMINATION
Remote sensing data applied to land-use survey at the Paraiba Valley --- Brazil
[E82-10025] p0081 N82-16443

VISUAL OBSERVATION
The effectiveness of instrumented visual studies of the earth from space p0114 A82-27505

VOLCANOES
Detection of volcanic ash fall area from Landsat MSS CCT data Eruption of Mt. Ontake in 1979 p0076 A82-27650

VOLCANOLOGY
Remote SO2 emission measurements with correlation spectrometers from volcanoes p0077 A82-27704

VORTICES
A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674

W

WARNING SYSTEMS
Flash flood forecasting --- and damage control measures
[WMO-577] p0107 N82-18671

WASHINGTON
Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma and North Dakota
[E82-10083] p0068 N82-21635

WATER
The effect of finite field size on classification and atmospheric correction
[NASA-TM-83818] p0120 N82-19645

WATER CIRCULATION
Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia
[E82-10064] p0108 N82-20587

WATER COLOR
A method for the retrieval of phytoplankton and suspended sediment concentrations from remote measurements of water colour p0094 A82-27620
Measurement of river sediments
[WMO-561] p0107 N82-18670

WATER DEPTH
A photometric method for depth determination by aerial photography p0101 A82-19831
Passive bathymetric measurements in the Bruce Peninsula region of Ontario p0129 A82-27642
Classification of Landsat MSS data for surface cover of small areas p0116 A82-27677
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605

WATER MANAGEMENT
Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838
Snow cover monitoring using AVHRR data from TIROS and NOAA satellites --- Advanced Very High Resolution Radiometer p0105 A82-27614
The use of space photographs to compile water-amelioration maps p0106 A82-28137

WATER POLLUTION
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
The possibilities of microwave remote sensing for the study of water resources and their pollution p0102 A82-27458
Remote-sensing determination of the characteristics of hydrological objects p0102 A82-27460
The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469
Monitoring of the thermal pollution of natural channels of water using infrared aerial photography p0104 A82-27471
Polarimetric method for the remote sensing of oil slicks on the sea surface p0095 A82-28135
LANDSAT imagery of the Venetian Lagoon. A multitemporal analysis
[E82-10036] p0119 N82-19612

WATER PRESSURE
Agricultural soil moisture experiment, Colby, Kansas 1978. Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632

WATER QUALITY
Influence of dissolved organic materials on turbid water optical properties and remote-sensing reflectance p0093 A82-20445
Remote sensing of salinity in the San Francisco Bay Delta p0102 A82-26839
Investigation of silting and currents in Lake Balaton by use of hydraulic models and aerial and space photographs p0104 A82-27472
Interpretation of multispectral aerial photographs of Lake Mueggelsee p0104 A82-27473
Spectrometric studies of the water composition of Lake Mueggelsee p0104 A82-27474
Noncontact methods for the quality control of water resources p0104 A82-27475
Inland water quality assessment from Landsat data p0105 A82-27610
An approach to path radiance correction in MSS images p0115 A82-27629
Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980 p0105 A82-27634
A formation process of an oceanic vortex analyzed by multi-temporal remote sensing p0095 A82-27674
Mapping of water quality using Landsat imagery p0106 A82-27692
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] p0106 N82-16439

WATER RESOURCES
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
The use of space photographs for hydrogeological studies of the Baikal region and Mongolia p0103 A82-27468
The effect of anthropogenic factors on the dynamics of lakes in the plains of Central Asia /studied on the basis of space photographs/ p0103 A82-27469
Noncontact methods for the quality control of water resources p0104 A82-27475
Analog devices for the processing of aerial and space images for the study of water resources p0104 A82-27476
Satellite sensing for extraction of groundwater resources information p0105 A82-27613
Strategies for using remotely sensed data in hydrologic models
[E82-10156] p0109 N82-21680
Observation of the Earth by radar
[NASA-TM-76830] p0124 N82-21687
Remote sensing for water resources and hydrology. An assessment of the Corps of Engineers' program
[PB82-137142] p0110 N82-21704

WATER RUNOFF
Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs p0102 A82-27462
The possibility of determining snow-meltage fronts using Meteor-satellite multispectral data /with Kazakhstan considered as an example/ p0102 A82-27463
Applications systems verification and transfer project. Volume 1: Operational applications of satellite snow cover observations: Executive summary --- usefulness of satellite snow-cover data for water yield prediction
[NASA-TP-1822] p0108 N82-20617
Applications systems verification and transfer project. Volume 2: Operational applications of satellite snow-cover observations and data-collection systems in the Arizona test site
[NASA-TP-1823] p0108 N82-20618
Applications systems verification and transfer project. Volume 3: Operational applications of satellite snow cover observations in California
[NASA-TP-1824] p0108 N82-20619
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations: Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620
Applications systems verification and transfer project. Volume 5: Operational applications of satellite snow-cover observations, northwest United States
[NASA-TP-1826] p0109 N82-20621
Applications systems verification and transfer project. Volume 6: Operational applications of satellite snow-cover observations NOAA/NESS support study
[NASA-TP-1827] p0109 N82-20622
Applications systems verification and transfer project. Volume 7: Cost/benefit analysis for the ASVT on operational applications of satellite snow-cover observations
[NASA-TP-1828] p0109 N82-20623
Applications systems verification and transfer project. Volume 8: Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624

WATER TEMPERATURE
HCMM hydrological analysis in Utah --- Utah lake
[E82-10063] p0107 N82-20586
Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements --- Delaware Bay, Cooper River, and the Potomac River estuaries; Luverne, Minnesota, soil moisture, and water temperature of Lake Anna, Virginia
[E82-10064] p0108 N82-20587

WATER VAPOR
A study of model parameters associated with the urban climate using HCMM data --- analysis of St. Louis, Missouri infrared imagery
[E82-10160] p0080 N82-21684

WATER WAVES
Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596
Integrated sensor system for collection of wave data applied to coastal engineering design p0094 A82-27602
The use of wave contrast measurements in the evaluation of SAR/gravity models p0130 A82-27675
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697
Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] p0096 N82-17802
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17805

WATERSHEDS
Investigation of the dynamics of the regional underground runoff of the Aral sea basin using space photography p0101 A82-20343
A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143
Aerospace methods for the study of water resources and their pollution --- Russian book p0102 A82-27457
Application of satellite data to analyze and predict meltage runoff in a mountain basin p0102 A82-27461
Dynamics of snow cover in mountain regions of the Aral Sea basin, studied using satellite photographs p0102 A82-27462
Spatial reasoning in remotely sensed data p0105 A82-27592
Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] p0106 N82-16439
Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445
Watershed model study using LANDSAT data p0106 N82-17602
Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597
Dynamic study of the upper Sao Francisco River and the Tres Marias reservoir using MSS/LANDSAT images --- Brazil
[E82-10082] p0108 N82-20605

Applications systems verification and transfer project. Volume 2: Operational applications of satellite snow-cover observations and data-collection systems in the Arizona test site
[NASA-TP-1823] p0108 N82-20618

Applications systems verification and transfer project. Volume 3: Operational applications of satellite snow cover observations in California
[NASA-TP-1824] p0108 N82-20619

Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations. Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620

Applications systems verification and transfer project. Volume 7: Cost/benefit analysis for the ASVT on operational applications of satellite snow-cover observations
[NASA-TP-1828] p0109 N82-20623

WEATHER

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634

WEATHER FORECASTING

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844

Application of satellite frost forecast technology to other parts of the United States, phase 2 --- Pennsylvania, Michigan, and Florida
[NASA-CR-166827] p0121 N82-20607

Freeze prediction model --- Pennsylvania
p0067 N82-20609

Applicability of satellite freeze forecasting and cold climate mapping to the other parts of the United States --- Michigan p0068 N82-20613

MSU test of P-model p0121 N82-20614

A satellite frost forecasting system for Florida
p0079 N82-20615

The design and implementation of an operational, computer-based weather radar system --- rainfall maps
[RSRE-MEMO-3151] p0122 N82-21499

WEATHER STATIONS

Optimal network density for atmospheric recording
p0079 N82-20776

WEST GERMANY

Sounding the aerosol distribution over the Upper Rhine Valley in the Valley in the Speyer area by means of lidar
p0079 N82-20782

WEST VIRGINIA

Spatial reasoning in remotely sensed data
p0105 A82-27592

WETLANDS

Change detection in the Peace-Athabasca Delta using digital Landsat data p0101 A82-24959

Spectral reflectance of hydrophytes p0102 A82-24960

Increase in correlation accuracy of remote sensing imagery by digital filtering p0113 A82-25454

Seasat imagery for detection of coastal Wetlands
p0063 A82-27700

Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] p0118 N82-16437

Application of remote sensing to state and regional problems --- mississippi
[E82-10033] p0078 N82-19609

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- The Everglades agricultural area, Lake Okeechobee, and the Suwanee River basin
[E82-10157] p0071 N82-21681

WHEAT

Influence of illumination and viewing geometry and atmospheric composition on the tasseled cap transformation of Landsat MSS data p0059 A82-24961

Dew and vapor pressure as complicating factors in the interpretation of spectral radiance from crops
p0060 A82-27617

Crop area estimates using ground-gathered and Landsat data: A multitemporal approach p0062 A82-27676

Documentation of computer procedures for labeling spring grains and discriminating between spring wheat and barley using LANDSAT data
[E82-10030] p0063 N82-16448

Wheat stress indicator model, Crop Condition Assessment Division (CCAD) data base interface driver, user's manual
[E82-10031] p0064 N82-19607

Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] p0064 N82-19610

AgRISTARS: Foreign commodity production forecasting. Minutes of the annual formal project manager's review, including preliminary technical review reports of FY80 experiments --- wheat/barley and corn/soybean experiments
[E82-10039] p0064 N82-19614

Preliminary evaluation of spectral, normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634

Utilization of Aerochrome 2443 film for identification and estimating wheat growing areas --- Rio Grande do Sul, Brazil
[INPE-2197-PRE/006] p0066 N82-19639

Dryland pasture and crop conditions as seen by HCMM --- Washita River watershed
[E82-10074] p0067 N82-20597

Registration verification of SEA/AR fields --- Oregon, Texas, Montana, Nebraska, Washington, Colorado, Kansas, Oklahoma, and North Dakota
[E82-10083] p0068 N82-21635

As-Built documentation of programs to implement the Robertson and Doraiswamy/Thompson models
[E82-10086] p0122 N82-21638

Wheat stress indicator model, Early Warning (EW) data base interface driver, user's manual
[E82-10115] p0069 N82-21652

The 1981 Argentina ground data collection
[E82-10127] p0070 N82-21658

Sonora exploratory study for the detection of wheat-leaf rust
[E82-10133] p0070 N82-21661

Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670

Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671

WILDLIFE

Digital processing of tropical forest habitat in Bangladesh and the development of a low cost processing facility at the National Zoo, Smithsonian Institution
p0063 A82-27687

The application of remote sensing to resource management and environmental quality programs in Kansas --- Cimarron National Grasslands, Prairie Potawatomi Reservation, and Kickapoo Reservation
[E82-10029] p0063 N82-16447

WIND (METEOROLOGY)

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697

Convergence zones in the South Atlantic and their influence on the precipitation regime in Northeastern Brazil
[INPE-2307-TDL/074] p0097 N82-19778

WIND DIRECTION

An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697

Sea state measurement with a two frequency scatterometer (theory)
[ESA-TT-710] p0096 N82-17802

Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] p0133 N82-19650

Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] p0133 N82-19651

WIND PROFILES

SASS measurements of the Ku-band radar signature of the ocean p0093 A82-21917

Coastal upwelling ecosystems analysis. Atlas of the JOINT I aircraft winds for the 500 foot level
[PB82-114703] p0097 N82-19796

WIND VELOCITY

Comparison of conventionally measured sea surface temperature and wind speed with data retrieved from satellite-borne microwave radiometry p0093 A82-24063

WIND VELOCITY MEASUREMENT

Observation of the turbulent structure in the planetary boundary layer with a kytoon-mounted ultrasonic anemometer system p0125 A82-21082

Satellite scatterometer feasibility study. Volume 1: Technical results --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-1] p0133 N82-19650

Satellite scatterometer feasibility study. Volume 2: Data extraction algorithm and error simulation for wind sensor --- Earth Resources Satellite (ERS 1)
[ESA-CR(P)-1492-VOL-2] p0133 N82-19651

WINTER

Photogrammetry from aircraft side camera movies - Winter MONEX p0075 A82-26721

Classification of the fields of anomaly in monthly water temperature of the North Atlantic during the cold half-year
[BLL-TRANS-1509-(9022.552)] p0097 N82-19756

WISCONSIN

A comparison between aerial photography and Landsat for computer land-cover mapping p0074 A82-22143

Wetland mapping from digitized aerial photography --- Sheboygan Marsh, Wisconsin
[E82-10019] p0118 N82-16437

Multidisciplinary research on the application of remote sensing to water resources problems --- Wisconsin
[E82-10021] p0106 N82-16439

WORLD METEOROLOGICAL ORGANIZATION

Modern methods for monitoring and controlling the timeliness, accuracy, and completeness of data for meteorological analysis p0073 A82-19179

WRANGELL MOUNTAINS (AK)

Landsat thermal imaging of alpine regions
p0079 A82-22147

WYOMING

Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system --- the Bearlodge area of northeastern Wyoming
[E82-10028] p0091 N82-16446

X

X RAY SPECTRA

Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601

Y

YIELD

AgRISTARS: Yield model development/soil moisture interface control document
[E82-10054] p0065 N82-19629

YUGOSLAVIA

Thermal IR detection of submarine gas seepages in the western Istra off shore area /Yugoslavia/
p0076 A82-27661

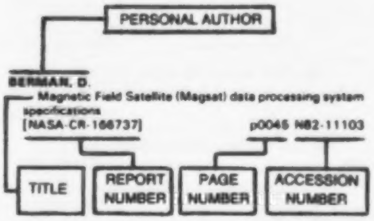
Z

ZENITH

A relation between Landsat digital numbers, surface reflectance, and the cosine of the solar zenith angle
p0114 A82-26841

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



PERSONAL AUTHOR
BERMAN, D.
Magnetic Field Satellite (Magsat) data processing system specifications
[NASA-CR-166737] p0045 N82-11103
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title, e.g., p0045 N82-11103. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

A

ABBOT, R. H.
An aerial survey of water turbidity and laser depth sounding performance along the Queensland Coast
[AD-A109050] p0098 N82-19802

ABBOTT, E. A.
A data base of geologic field spectra
p0090 A82-27600

ABDEL-AZIZ, Y. I.
Accuracy of the normal case of close-range photogrammetry p0126 A82-22140

ABDELRAZIK, M.
Active microwave investigation of snowpacks Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] p0107 N82-19646

ABOTTEEN, K. M.
AgRISTARS Foreign commodity production forecasting Corn/soybean decision logic development and testing
[E82-10056] p0065 N82-19631

ADAMS, T. R.
Proposed digital cartridge recording system for WRELADS
[AD-A109484] p0134 N82-20491

AGHASSY, J.
Application of side-looking color infrared photography for structure detection in subtle topography
p0082 A82-27611

AHERN, F. J.
The influence of illumination and viewing geometry on the reflectance factor of agricultural targets
p0061 A82-27646
Landsat MSS applied to rangeland management in Western Canada p0063 A82-27697

AKOVETSKII, V. I.
Analytic methods of geodetic referencing of nontopographic images p0083 A82-28134

ALBEROTANZA, L.
LANDSAT imagery of the Venetian Lagoon A multitemporal analysis
[E82-10036] p0119 N82-19612

ALDERMAN, P. K.
Experiences with digital terrain elevation data contouring programs
[AD-A110280] p0087 N82-21690

ALDRICH, F. T.
The role of computer graphics in geographic research
p0117 A82-27923

ALEKSEEV, A. S.
Automation of the processing of aerial and space images for forest inventory p0057 A82-20350
Structure of hardware and software at a regional center for the automated processing of aerial and space remote-sensing images p0130 A82-28128

ALEXANDER, S. J.
Study of a radar altimeter for the European remote sensing program Volume 1 Executive summary
[SPAR-R 1090-ISSUE-A] p0133 N82-19652

ALI, M. E. O.
Analytical triangulation of space photography
p0111 A82-20402

ALLEN, L. H., JR.
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10040] p0064 N82-19615
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10157] p0071 N82-21681

ALLEY, R. E.
A data base of geologic field spectra
p0090 A82-27600

ALVAREZ, R.
Application of machine processing of visible and thermal data to the study of the geothermal area of Cerro Prieto, Mexico p0117 A82-27693

ALVES, E. C. M.
Relation of the activities of the IPDF/INPE project (reforestation subproject) during the year 1979
[E82-10078] p0067 N82-20601

AMBROSETTI, E.
Examination of the operational prospects for remote sensing
[ESA-CR(P)-1476] p0138 N82-18669

AMIS, M. L.
Evaluation of large area crop estimation techniques
p0061 A82-27662

ANDERS, R.
Satellite scatterometer feasibility study Volume 1 Technical results
[ESA-CR(P)-1492-VOL-1] p0133 N82-19650

ANUSKIEWICZ, T.
Resourceful decisions LANDAT in Michigan
[E82-10037] p0078 N82-19601

ARKHIPOV, V. V.
The earth resources program for the long-term orbital station Salyut 6 p0131 A82-28132

ARMAND, N. A.
Machine implementation of algorithms for the mapping of soil moisture on the basis of microwave-radiometer measurements p0131 A82-28142

ARP, H.
Mapping in tropical forests - A new approach using the laser APR p0081 A82-20407

ARTLEY, J. A.
Preliminary evaluation of spectral normal and meteorological crop stage estimation approaches
[E82-10059] p0065 N82-19634

ARYA, L. M.
Agricultural soil moisture experiment, Colby, Kansas 1978 Measured and predicted hydrological properties of the soil
[E82-10057] p0065 N82-19632

ASLAM, A.
Active microwave investigation of snowpacks Experimental documentation, Colorado 1979-1980
[NASA-CR-166727] p0107 N82-19646

ATARAS, W. S.
An information adaptive system study report and development plan
[NASA-CR-166768] p0120 N82-19644

ATLAS, D.
Precipitation measurements from space - Workshop summary 28 April-1 May 1981, Greenbelt, MD
p0077 A82-28295
Estimating ocean-air heat fluxes during cold air outbreaks by satellite
[NASA-TM-83854] p0097 N82-19781

ATTEMA, E. P. W.
The Dutch ROVE program p0057 A82-21026
A radar signature model for partially coherent scattering from irregular surfaces p0079 A82-21038

AUSTIN, W. W.
Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842
Recommended data sets, corn segments and spring wheat segments, for use in program development
[E82-10034] p0064 N82-19610
Registration verification of SEA/AR fields
[E82-10083] p0068 N82-21635
AgRISTARS Supporting research Classification of corn Badhwar profile similarity technique
[E82-10150] p0071 N82-21676

AXELSSON, S. R. J.
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] p0120 N82-19656

B

BADHWAR, G. D.
Use of Landsat-derived temporal profiles for corn-soybean feature extraction and classification p0059 A82-26842

BAHMAD, A.
Remote sensing applied to basement tectonics of the calcareous High Atlas /Morocco/ p0089 A82-26014

BAILEY, T.
Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445

BAKAI, G. G.
Potential use of space photographs obtained from the manned orbital station Salyut-5 in order to compile a set of small-scale thematic maps of mountain and piedmont regions of Central Asia p0083 A82-28139

BAKER, D. J.
Recent auroral measurements using a field-widened interferometer spectrometer p0126 A82-21434

BAKER, K. S.
Ship and satellite bio-optical research in the California Bight
[NASA-CR-168681] p0098 N82-20823

BAKLASHOV, N. I.
Complex of units for the storage and automated processing of research data p0131 A82-28140

BALASUBRAMANIAN, S.
Microwave brightness temperature pattern over the Indian subcontinent and the surrounding oceans as observed by the satellite microwave radiometer /SAMIR/ onboard Bhaskara p0093 A82-19560

BALL, A. P.
The design and implementation of an operational, computer-based weather radar system
[RSRE-MEMO-3151] p0122 N82-21499

BALMINO, G.
Gradio Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

BARBOS, M. P.
Study project of intrusive rocks States of Espirito Santo and Rio de Janeiro, south and east of Minas Gerais and southeast of the state of Sao Paulo
[E82-10076] p0092 N82-20599

BARBOSA, M. N.
CNPq/INPE LANDSAT system
[E82-10023] p0118 N82-16441
The LANDSAT system operated in Brazil by CNPq/INPE - results obtained in the area of mapping and future perspectives
[E82-10080] p0121 N82-20603

BARLIER, F.
Gradio Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

BARKER, J. L.
Information expectations from Landsat-D
p0128 A82-27583
Characterizing user requirements for future land observing satellites
[NASA-TM-83867] p0081 N82-17562

BARNES, J. C.
Applications systems verification and transfer project Volume 8 Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624

BARR, B. G.
The application of remote sensing to resource management and environmental quality programs in Kansas
[E82-10029] p0063 N82-16447

BARRACLOUGH, D. R.
Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10075] p0086 N82-20598

BARRETT, E. C.
The use of satellite data in rainfall monitoring
p0101 A82-22873

BARRINGER, T. H.
Stochastic models of cover class dynamics
p0059 A82-27586

BARTHOLIC, J. F.
Application of satellite frost forecast technology to other parts of the United States, phase 2
[NASA-CR-166827] p0121 N82-20807

BARTSCHI, B. Y.
Recent auroral measurements using a field-widened interferometer spectrometer p0126 A82-21434

BASHENINA, N. V.
Analysis of space imagery to compile a geomorphological map of the world p0089 A82-20338

BAUER, B.
An automatic optimum kernel-size selection technique for edge enhancement p0113 A82-26840

BAUER, M. E.
Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645
Influence of solar illumination angle on soybean canopy reflectance p0063 A82-28153
Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590
Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies
[E82-10068] p0067 N82-20591
Soybean canopy reflectance as influenced by cultural practices
[E82-10106] p0068 N82-21647
A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669
Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670
Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671
Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

BAYLIS, P. E.
University of Dundee satellite image data acquisition and archiving facility p0130 A82-27659

BEAL, R. C.
Optimal spatial filtering and transfer function for SAR ocean wave spectra p0094 A82-27596

BEAUDET, P. R.
Context dependent modeling p0114 A82-27587
An information adaptive system study report and development plan
[NASA-CR-166768] p0120 N82-19644
Context sensitive formulations of antenna pattern correction and side lobe compensation for NOSS/LAMMR real time processing
[NASA-CR-166789] p0122 N82-21457

BELIAEV, B. I.
Color characteristics of the earth's surface determined on the basis of spectroscopy results from Salyut 4
p0073 A82-19826

BELKSY, L. E.
Development and applications of techniques to process hydrometeor distribution data
[AD-A109929] p0109 N82-20822

BELL, R. E.
Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 A82-19177

BENDURA, R.
The NASA participation in the 1980 EPA PEPE/NEROS field measurements program p0075 A82-26621

BENITEZ O., A.
Inventory of eroded areas in the state of Guanajuato Mexico, by automatic analysis of Landsat images
p0076 A82-27690

BENNETT, J. R.
Features of a generalized digital Synthetic Aperture Radar processor p0128 A82-27595

BENNY, A. H.
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] p0118 N82-18657

BENTLEY, C. R.
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10062] p0086 N82-20585
Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10147] p0087 N82-21674

BENTON, E. R.
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10162] p0087 N82-21686

BERG, C. P.
Calcium carbonate precipitation in Pyramid Lake, Nevada, as monitored by satellite - 1978 and 1980
p0105 A82-27634

BERG, D. W.
Integrated sensor system for collection of wave data applied to coastal engineering design p0094 A82-27602

BERGAMINI, E. W.
A microcomputer for control of data collection platforms
[INPE-2104-RPE/331] p0133 N82-18881

BERGER, Z.
Application of side-looking color infrared photography for structure detection in subtle topography
p0082 A82-27611

BERLIN, G. L.
Cliff and slope topography of part of the Grand Canyon, Arizona as characterized on a Seasat radar image
p0082 A82-26843

BERNARD, A.
Gradio: Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

BERNIER, M.
Visual and digital analysis of H.C.M.M. data over eastern Canada p0117 A82-27698

BERTHOLD, G.
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027

BEST, R. G.
Spectral reflectance of hydrophytes p0102 A82-24960
Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445

BIEHL, L. L.
Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645
Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671

BILLINGSLEY, F. C.
Modeling misregistration and related effects on multispectral classification p0113 A82-25455

BIRRER, I. J.
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027

BLANCHARD, A. J.
Volumetric effects in cross-polarized airborne radar data p0058 A82-21032

BLANCHARD, B. J.
Dryland pasture and crop conditions as seen by HCMM
[E82-10074] p0067 N82-20597

BODECHTEL, J.
Geotechnical applications of Landsat image analysis of Bhakra Dam Reservoir, India p0102 A82-26838

BOGORODSKII, V. V.
The use of data from satellite-borne microwave scanning radiometers for the automated compilation of operational maps of ice cover for the Arctic Ocean
p0095 A82-28145

BOLSENGA, S. J.
Spectral reflectances of freshwater ice and snow from 340 through 1100 nm p0106 N82-17601

BOLSHAKOV, V. D.
Investigation of the earth on the basis of space photographic data p0082 A82-27507

BOMMAS, G.
Satellite scatterometer feasibility study. Volume 1: Technical results
[ESA-CR(P)-1492-VOL-1] p0133 N82-19650

BONN, F.
Visual and digital analysis of H.C.M.M. data over eastern Canada p0117 A82-27698

BORISOGLEBSKII, G. I.
Evaluation of the state of crops from satellite data
p0059 A82-27393

BORMANN, P.
Some problems concerning the effective use of remote sensing p0137 A82-28123

BORN, G. H.
Seasat data utilization project
[NASA-CR-168557] p0097 N82-18660

BORNEMAN, R.
Satellite observed cloud patterns associated with excessive precipitation outbreaks
[PB80-215130] p0073 A82-19177

BOUZAT, C.
Gradio: Project proposal for satellite gradiometry
[NASA-TM-76796] p0134 N82-20606

BOWIN, C.
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] p0085 N82-19732

BOWLEY, C. J.
Applications systems verification and transfer project. Volume 8: Satellite snow mapping and runoff prediction handbook
[NASA-TP-1829] p0109 N82-20624

BRACALENTE, E. M.
Sigma/deg/ signature of the Amazon rain forest obtained from the Seasat scatterometer p0125 A82-21027

BRACHET, G.
Towards an operational SPOT system - A preliminary assessment p0114 A82-27607

BRANDENBERGER, A. J.
Analytical triangulation of space photography
p0111 A82-20402

BRAUN, O. P. G.
A structural synthesis of Brazil, based on the study of major lineaments derived from remote sensing imagery interpretation p0079 A82-26012

BRIEGLEB, B. P.
Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data
p0075 A82-26980

BRIEN, M. J.
The design and implementation of an operational, computer-based weather radar system
[RSRE-MEMO-3151] p0122 N82-21499

BRIMACOMBE, C. A.
Atlas of METEOSAT imagery
[ESA-SP-1030] p0124 N82-21700

BRISCO, B.
Manual and automatic crop identification with airborne radar imagery p0057 A82-20408

BRIVIO, P. A.
Heat Capacity Mapping Mission (HCMM) program. Study of geological structure of Sicily and other Italian areas
[E82-10073] p0091 N82-20596

BROCHU, R.
Visual and digital analysis of H.C.M.M. data over eastern Canada p0117 A82-27698

BROOKS, J.
Implementation of the Space Oblique Mercator projection in a production environment p0129 A82-27628

BROWN, A. J.
Applications systems verification and transfer project. Volume 3: Operational applications of satellite snow cover observations in California
[NASA-TP-1824] p0108 N82-20619

BROWN, J. W.
The Seasat low rate data processing system
p0083 A82-24061

BROWN, K. S.
Cloud Top Scanning radiometer (CTS): User's guide
[NASA-TM-83887] p0135 N82-21826

BROWN, P. M.
As-built design specification for MISMAP
[E82-10091] p0123 N82-21643

BROWN, R. J.
A timely and accurate potato acreage estimate from Landsat - Results of a demonstration p0060 A82-27621
The influence of illumination and viewing geometry on the reflectance factor of agricultural targets
p0061 A82-27646
Landsat MSS applied to rangeland management in Western Canada p0063 A82-27697

BRUECK, P. M.
Relationship of hydrothermal phenomena within the Leinster Granite to crustal fractures delineated from Landsat imagery p0089 A82-26015

BRYAN, M. L.
Analysis of two Seasat synthetic aperture radar images of an urban scene p0074 A82-25452

BRYANT, E.
Fanning - A classification algorithm for mixture landscapes applied to Landsat data of Maine forests
p0062 A82-27668

BUGLIOSI, E. F.
Use of Landsat imagery to delineate glaciofluvial aquifers in southeast South Dakota p0105 A82-27637

BURKE, F. A. C.
Study of Earth Resources Satellite (ERS) data reduction unit
[BAE-TP-7905] p0120 N82-19649

The NASA participation in the 1980 EPA PEPE/NEROS field measurements program p0075 A82-26621

The microwave radiometer spacecraft: A design study. Executive summary p0131 N82-16154

Mission definition for a large-aperture microwave radiometer spacecraft p0131 N82-16155

Laboratory upwelled radiance and reflectance spectra of Kerr reservoir sediment waters [NASA-TP-1993] p0110 N82-21774

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. LEWIS RESEARCH CENTER, CLEVELAND, OHIO

Ground-truth observations of ice-covered North Slope Lakes imaged by radar [NASA-TM-84127] p0107 N82-18664

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION. WALLOPS FLIGHT CENTER, WALLOPS ISLAND, VA.
NOSS altimeter algorithm specifications
[NASA-RP-1083] p0095 N82-16683

NATIONAL BUREAU OF STANDARDS, BOULDER, COLO.
Recovering ocean waveheight from HF radar sea echoes distorted by imperfect ionospheric reflection
[PB82-113283] p0096 N82-17805

NATIONAL CENTER FOR ATMOSPHERIC RESEARCH, BOULDER, COLO.
Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data
p0075 A82-26980

NATIONAL ENVIRONMENTAL SATELLITE SERVICE, WASHINGTON, D. C.
Applications systems verification and transfer project. Volume 6: Operational applications of satellite snow-cover observations NOAA/NESS support study
[NASA-TP-1827] p0109 N82-20622

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, ROCKVILLE, MD.
Error analysis of pulse location estimates for simulated bathymetric lidar returns
[PB82-109448] p0096 N82-17803

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, SILVER SPRING, MD.
Demonstration of a long-range atmospheric tracer system using perfluorocarbons
[PB82-106246] p0081 N82-16613

NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION, WASHINGTON, D. C.
Publications and reports on contracts and grants, 1980
[PB82-103219] p0138 N82-17792
Evaluation of HCMM satellite data for estuarine tidal circulation patterns and thermal inertia soil moisture measurements
[E82-10064] p0108 N82-20587

NATIONAL RESEARCH INST. FOR OCEANOLOGY, STELLENBOSCH (SOUTH AFRICA).
Interaction between the Agulhas current and the subtropical convergence
[CSIR-RR-384] p0098 N82-20824

NATIONAL WEATHER SERVICE, FORT WORTH, TEX.
Weather satellite interpretation: Introduction to weather satellite imagery
[PB82-107657] p0118 N82-16677

NAVAL OCEAN RESEARCH AND DEVELOPMENT ACTIVITY, BAY ST. LOUIS, MISS.
Structure and variability of the Alboran Sea frontal system p0093 A82-20447

NAVAL OCEAN SYSTEMS CENTER, SAN DIEGO, CALIF.
Satellite-borne non-DOD sensors for terrestrial observations
[AD-A109486] p0134 N82-20630

NAVAL RESEARCH LAB., WASHINGTON, D. C.
Surface wave statistics and spectra during high sea state conditions in the North Atlantic
[AD-A109832] p0098 N82-20827

NAVAL SURFACE WEAPONS CENTER, DAHLGREN, VA.
Some altimetric signatures from Seasat over the mid-Pacific Seamount Range
[AD-A110419] p0099 N82-21691

NEBRASKA UNIV., LINCOLN.
A gradient model of vegetation and climate utilizing NOAA satellite imagery. Phase 1: Texas transect
[E82-10107] p0089 N82-21648

NORTH CAROLINA STATE UNIV., RALEIGH.
Remote sensing of salinity in the San Francisco Bay Delta p0102 A82-26839
Compatibility study of the MAGSAT data and aeromagnetic data
[E82-10136] p0123 N82-21663

O

OFFICE OF NAVAL RESEARCH, PASADENA, CALIF.
Arabian sea project of 1980: Composites of infrared images
[AD-A107910] p0096 N82-17567

OFFICE OF TECHNOLOGY ASSESSMENT, WASHINGTON, D. C.
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring
[OTA-O-142] p0097 N82-18844

OLD DOMINION UNIV., NORFOLK, VA.
The relationship among sea surface roughness variations, oceanographic analyses, and airborne remote sensing analyses
[NASA-CR-168444] p0096 N82-17798
Usage and limitations of characteristic vector analysis of remote sensing multispectral data for the identification and quantification of water quality parameters
p0118 N82-18656

P

PARIS VI UNIV. (FRANCE).
Preliminary models of the core field
[E82-10128] p0087 N82-21659
Continuation of potential field data to a common altitude
[E82-10138] p0123 N82-21665
Separation of internal and external fields: A new technique of data screening
[E82-10139] p0123 N82-21666

PENNSYLVANIA STATE UNIV., UNIVERSITY PARK.
Delineation of soil temperature regimes from HCMM data
[E82-10042] p0119 N82-19617
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10048] p0120 N82-19623
Application of satellite frost forecast technology to other parts of the United States, phase 2
[NASA-CR-166827] p0121 N82-20607
Freeze prediction model p0087 N82-20609
The Office for Remote Sensing of Earth Resources
p0121 N82-20612
Delineation of soil temperature regimes from HCMM data
[E82-10141] p0070 N82-21668
Applications of HCMM satellite data to the study of urban heating patterns
[E82-10161] p0080 N82-21685

PENNSYLVANIA UNIV., PHILADELPHIA.
Stochastic models of cover class dynamics
p0059 A82-27586

PHOENIX CORP., MCLEAN, VA.
Improved definition of crustal anomalies for Magsat data
[E82-10051] p0085 N82-19626

PUBLIC TECHNOLOGY, INC., WASHINGTON, D. C.
Remote sensing procurement package: A management report for state and local governments
[E82-10052] p0138 N82-19627

PURDUE UNIV., LAFAYETTE, IND.
Soybean canopy reflectance as a function of view and illumination geometry p0061 A82-27645
Evaluation of a segment-based LANDSAT full-frame approach to corp area estimation
[E82-10067] p0066 N82-20590
Effects of nitrogen nutrition on the growth, yield and reflectance characteristics of corn canopies
[E82-10068] p0067 N82-20591
Soybean canopy reflectance as influenced by cultural practices
[E82-10105] p0068 N82-21647
A multiband radiometer and data acquisition system for remote sensing field research
[E82-10142] p0134 N82-21669
Spectral-agronomic relationships of corn, soybean and wheat canopies
[E82-10143] p0070 N82-21670
Simulated response of a multispectral scanner over wheat as a function of wavelength and view/illumination direction
[E82-10144] p0071 N82-21671
Variability of reflectance measurements with sensor altitude and canopy type
[E82-10145] p0071 N82-21672
Determination of the optimal level for combining area and yield estimates
[E82-10146] p0071 N82-21673

R

READING UNIV. (ENGLAND).
Land cover classification accuracy as a function of sensor spatial resolution p0076 A82-27665

RESEARCH AND DATA SYSTEMS, INC., LANHAM, MD.
Development of a surface isolation estimation technique suitable for application of polar orbiting satellite data
[E82-10122] p0123 N82-21656

RESEARCH INST. OF NATIONAL DEFENCE, LINKOEPING (SWEDEN).
Observations with an imaging 35 GHz radiometer of terrain in Malmslatett, July 1980
[FOA-C-30240-E1/E3] p0133 N82-18672

RESEARCH INST. OF NATIONAL DEFENCE, STOCKHOLM (SWEDEN).
Remote sensing techniques suitable for exploration and navigation in and under sea ice
[FOA-REPT-VOL-15-NO-2] p0096 N82-17566

RESEARCH TRIANGLE INST., RESEARCH TRIANGLE PARK, N. C.
A study of model parameters associated with the urban climate using HCMM data
[E82-10140] p0079 N82-21667
A study of model parameters associated with the urban climate using HCMM data
[E82-10159] p0080 N82-21683
A study of model parameters associated with the urban climate using HCMM data
[E82-10160] p0080 N82-21684

ROYAL AIRCRAFT ESTABLISHMENT, FARNBOROUGH (ENGLAND).
Automatic relocation of ground control points in LANDSAT imagery
[RAE-TR-81071] p0118 N82-18657
An introduction to image processing at Royal Aircraft Establishment, Farnborough, England
[RAE-TR-80107] p0122 N82-21565
Computer based technique for converting a contour map into an equispaced grid of points
[RAE-TR-80110] p0087 N82-21697

ROYAL NETHERLANDS AIRCRAFT FACTORIES FOKKER, SCHIPHOL-OOST.
Development of a breadboard cooler for infrared remote sensing payloads, phase 1
[FOK-RV-R-81-064] p0134 N82-19653

ROYAL SIGNALS AND RADAR ESTABLISHMENT, MALVERN (ENGLAND).
The design and implementation of an operational, computer-based weather radar system
[RSRE-MEMO-3151] p0122 N82-21499

S

SAAB-SCANIA, LINKOPING (SWEDEN).
On the accuracy of thermal inertia mapping by infrared imagery
[SAAB-REPR-AE-10] p0120 N82-19656

SOIL CONSERVATION SERVICE, DENVER, COLO.
Applications systems verification and transfer project. Volume 4: Operational applications of satellite snow cover observations. Colorado Field Test Center
[NASA-TP-1825] p0108 N82-20620

SOUTH DAKOTA STATE UNIV., BROOKINGS.
Spectral reflectance of hydrophytes p0102 A82-24960
HCMM detection of high soil moisture areas
p0059 A82-24963
Remote sensing applications to resource problems in South Dakota
[E82-10027] p0132 N82-16445

SPAR AEROSPACE PRODUCTS LTD., TORONTO (ONTARIO).
Study of a radar altimeter for the European remote sensing program. Volume 1: Executive summary
[SPAR-R.1090-ISSUE-A] p0133 N82-19652

SRI INTERNATIONAL CORP., MENLO PARK, CALIF.
An experimental program to provide remote measurement and analysis of ocean waves, sea level winds and balanced pressure in support of Seasat-A
[PB81-246035] p0095 N82-16697

STANFORD UNIV., CALIF.
Model studies of laser absorption computed tomography for remote air pollution measurement p0077 A82-28152
Integration of LANDSAT with geology and airborne geophysics into an operational mineral exploration system
[E82-10028] p0091 N82-16446
HCMM: Soil moisture in relation to geologic structure and lithology, northern California
[E82-10135] p0092 N82-21662

STATE UNIV. OF NEW YORK, STONY BROOK.
Low-latitude cloudiness and climate feedback - Comparative estimates from satellite data
p0075 A82-26980

STATE UNIV. OF NEW YORK, SYRACUSE.
Ground level reflectance measurement techniques - An evaluation with emphasis on the importance of spectral calibration p0116 A82-27689

SYSTEMATICS GENERAL CORP., STERLING, VA.
Guidelines for spaceborne microwave remote sensors
[NASA-RP-1086] p0133 N82-19647

SYSTEMS AND APPLIED SCIENCES CORP., RIVERDALE, MD.
Simple radiative transfer model for relationships between canopy biomass and reflectance p0057 A82-20422

T

TEL-AVIV UNIV. (ISRAEL).
Contrast reduction by the atmosphere and retrieval of nonuniform surface reflectance p0112 A82-20423

TENNESSEE VALLEY AUTHORITY, CHATTANOOGA.
National High-Altitude Photography (NHAP) of the Tennessee Valley Region, volume 1, no. 1
[PB82-130899] p0134 N82-21703

TENNESSEE VALLEY AUTHORITY, NORRIS.
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[PB82-115122] p0066 N82-19715
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[PB82-115130] p0066 N82-19716

TEXAS A&M UNIV., COLLEGE STATION.
HCMM detection of high soil moisture areas
p0059 A82-24963
Dryland pasture and crop conditions as seen by HCMM
[E82-10074] p0067 N82-20597

TEXAS UNIV. AT ARLINGTON.
Digital correlation of DDRS data
[NASA-CR-167494] p0118 N82-16452

THOMSON-CSF, MEUDON-LA-FORET (FRANCE).
Study of synthetic aperture radar in 2D - 2FS operation over the ocean
[ESA-CR(P)-1475] p0132 N82-18481

V

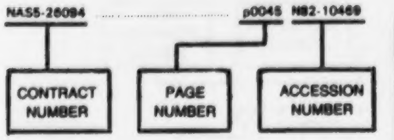
VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.
Spatial reasoning in remotely sensed data
p0105 A82-27592

W

WASHINGTON UNIV., SEATTLE.
Sea ice movements from synthetic aperture radar
[AD-A109002] p0097 N82-19435
WASHINGTON UNIV., ST. LOUIS, MO.
Program on stimulating operational private sector use of Earth observation satellite information
[E82-10131] p0138 N82-21660
WISCONSIN UNIV. - MADISON.
Wetland mapping from digitized aerial photography
[E82-10019] p0118 N82-16437
The development and testing of methods to infer midlatitude precipitation intensity from geosynchronous satellite infrared data
[AD-A108881] p0120 N82-19788
WISCONSIN UNIV., MADISON.
Multidisciplinary research on the application of remote sensing to water resources problems
[E82-10021] p0106 N82-16439
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10062] p0088 N82-20585
Investigation of antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10147] p0087 N82-21674
WOODS HOLE OCEANOGRAPHIC INSTITUTION, MASS.
Gravity and geoid anomalies of the Philippine Sea: Evidence on the depth of compensation for the negative residual water depth anomaly
[NASA-CR-168639] p0085 N82-19732
WORLD METEOROLOGICAL ORGANIZATION, GENEVA (SWITZERLAND).
Measurement of river sediments
[WMO-561] p0107 N82-18670
Flash flood forecasting
[WMO-577] p0107 N82-18671
WYOMING UNIV., LARAMIE.
Ozone measurements to 48Km with chemiluminescent ozone detectors
[AD-A110342] p0134 N82-21808

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

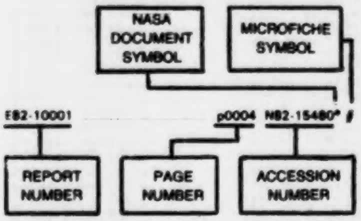
REPORT/ACCESSION NUMBER INDEX

EARTH RESOURCES / *A Continuing Bibliography (Issue 34)* **JULY 1982**

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

16. Abstract

This bibliography list 567 reports, articles, and other documents introduced into the NASA Scientific and Technical Information System between April 1, and June 30, 1982. Emphasis is placed on the use of remote sensing and geophysical instrumentation in spacecraft and aircraft to survey and inventory natural resources and urban areas. Subject matter is grouped according to agriculture and forestry, environmental changes and cultural resources, geodesy and cartography, geology and mineral resources, hydrology and water management, data processing and distribution systems, instrumentation and sensors, and economic analysis.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

ILLINOIS

WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

ACCESSION NUMBER RANGES

Accession numbers cited in this Supplement fall within the following ranges.

STAR (N-10000 Series)	N82-22141 - N82-28242
IAA (A-10000 Series)	A82-28539 - A82-38102

This bibliography was prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

NASA SP-7041(35)

EARTH RESOURCES

A CONTINUING BIBLIOGRAPHY WITH INDEXES

Issue 35

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced between July 1 and September 30, 1982 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

This supplement is available as NTISUB/038/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $10.50 domestic; $21.50 foreign for standing orders. Please note: Standing orders are subscriptions which do not terminate at the end of a year, as do regular subscriptions, but continue indefinitely unless specifically terminated by the subscriber.

INTRODUCTION

The technical literature described in this continuing bibliography may be helpful to researchers in numerous disciplines such as agriculture and forestry, geography and cartography, geology and mining, oceanography and fishing, environmental control, and many others. Until recently it was impossible for anyone to examine more than a minute fraction of the Earth's surface continuously. Now vast areas can be observed synoptically, and changes noted in both the Earth's lands and waters, by sensing instrumention on orbiting spacecraft or on aircraft.

This literature survey lists 587 reports, articles, and other documents announced between July 1 and September 30, 1982 in *Scientific and Technical Aerospace Reports (STAR)*, and *International Aerospace Abstracts (IAA)*.

The coverage includes documents related to the identification and evaluation by means of sensors in spacecraft and aircraft of vegetation, minerals, and other natural resources, and the techniques and potentialities of surveying and keeping up-to-date inventories of such riches. It encompasses studies of such natural phenomena as earthquakes, volcanoes, ocean currents, and magnetic fields; and such cultural phenomena as cities, transportation networks, and irrigation systems. Descriptions of the components and use of remote sensing and geophysical instrumentation, their subsystems, observational procedures, signature and analyses and interpretive techniques for gathering data are also included. All reports generated under NASA's Earth Resources Survey Program for the time period covered in this bibliography will also be included. The bibliography does not contain citations to documents dealing mainly with satellites or satellite equipment used in navigation or communication systems, nor with instrumentation not used aboard aerospace vehicles.

The selected items are grouped in nine categories. These are listed in the Table of Contents with notes regarding the scope of each category. These categories were especially chosen for this publication, and differ from those found in *STAR* and *IAA*.

Each entry consists of a standard bibliographic citation accompanied by an abstract. The citations and abstracts are reproduced exactly as they appeared originally in *STAR*, or *IAA*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the variation in citation appearance.

Under each of the nine categories, the entries are presented in one of two groups that appear in the following order:

IAA entries identified by accession number series A82-10,000 in ascending accession number order;

STAR entries identified by accession number series N82-10,000 in ascending accession number order.

After the abstract section, there are six indexes:

subject, personal author, corporate source, contract number, report/accession number, and accession number.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A82-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $8.00 per document. Microfiche(1) of documents announced in *IAA* are available at the rate of $4.00 per microfiche on demand, and at the rate of $1.35 per microfiche for standing orders for all *IAA* microfiche.

Minimum air-mail postage to foreign countries is $2.50 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N82-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code preceded by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Document Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction)

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

TABLE OF CONTENTS

Page

Category 01 Agriculture and Forestry 1
Includes crop forecasts, crop signature analysis, soil identification, disease detection, harvest estimates, range resources, timber inventory, forest fire detection, and wildlife migration patterns.

Category 02 Environmental Changes and Cultural Resources 21
Includes land use analysis, urban and metropolitan studies, environmental impact, air and water pollution, geographic information systems, and geographic analysis.

Category 03 Geodesy and Cartography 31
Includes mapping and topography.

Category 04 Geology and Mineral Resources 40
Includes mineral deposits, petroleum deposits, spectral properties of rocks, geological exploration, and lithology.

Category 05 Oceanography and Marine Resources 49
Includes sea-surface temperature, ocean bottom surveying imagery, drift rates, sea ice and icebergs, sea state, fish location

Category 06 Hydrology and Water Management 59
Includes snow cover and water runoff in rivers and glaciers, saline intrusion, drainage analysis, geomorphology of river basins, land uses, and estuarine studies.

Category 07 Data Processing and Distribution Systems 63
Includes film processing, computer technology, satellite and aircraft hardware, and imagery.

Category 08 Instrumentation and Sensors 76
Includes data acquisition and camera systems and remote sensors.

Category 09 General 82
Includes economic analysis.

WINTERKILL INDICATOR MODEL, CROP CONDITION ASSESSMENT DIVISION (CCAD) DATA BASE INTERFACE DRIVER, USER'S MANUAL

R. F. Hansen, Principal Investigator Mar. 1981 13 p ref
Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior, and Agency for International Development ERTS
(Contract NAS9-15800; Proj. AgRISTARS)
(E82-10014; NASA-CR-161031; EW-L1-00713; LEMSCO-16033; JSC-17117) Avail: NTIS HC A02/MF A01 CSCL 02C

Instructions are given for using the Winterkill indicator model CCAD data base interface driver. The purpose of the system is to interface the Winterkill Indicator Model with the CCAD operational data base. The interface driver routine decides what meteorological stations should be processed and calls the proper subroutines to process the stations. Author

A82-17841 * # **Results from the July 1981 Workshop on Passive Remote Sensing of the Troposphere.** L. S. Keafer, Jr. and H. G. Reichle, Jr. (NASA, Langley Research Center, Hampton, VA). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 20th, Orlando, FL, Jan. 11-14, 1982, Paper 82-0207*. 8 p. 6 refs.

Potential roles of passive remote sensors in the study of the chemistry and related dynamics of the lower atmosphere were defined by a Tropospheric Passive Remote Sensing Workshop, and technology advances required to implement these roles were identified. A promising role is in making global-scale, multilayer measurements of the more abundant trace tropospheric gaseous species (e.g., O3, CO, CH4, HNO3) and of aerosol thickness and size distribution. It includes both nadir- and limb-viewing measurements. Technology advances focus on both scanning- and fixed-spectra, nadir-viewing techniques with resolutions of 0.1 kaysers or better. Balloon- and Shuttle-borne experiments should be performed to study the effects of instrument noise and background fluctuations on data inversion and to determine the utility of simultaneously obtained nadir- and limb-viewing data. A82-22539
A REPORT ON THE 'COSMIC RAY PROPAGATION PROBLEM'
P. S. FREIER (Minnesota, University, Minneapolis, MN) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 182-185. refs

Data on abundances of elements are now of such quality, that the major source of discrepancies in cosmic ray propagation results is believed to be due to a difference in the propagation programs being used by different groups. Nine groups were therefore asked to use a standardized source, E equals 2.3 GeV/n with no energy loss, and propagate it through a 5 g/sq cm exponential path length of hydrogen, using their values of the Silverberg and Tsao cross sections at 2.3 GeV/n (1973, 1977, 1979). Results indicate significant discrepancies arising from propagation, demonstrating the differences that can result when different physical conditions are assumed. J.F.

A82-22541* Chicago Univ., Ill.
THE QUESTION OF SHORT PATHLENGTHS IN INTERSTELLAR PROPAGATION
M. GARCIA-MUNOZ, T. G. GUZIK, J. A. SIMPSON, and J. P. WEFEL (Chicago, University, Chicago, IL) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 192-195. refs
(Contract NAS5-25731; NGL-14-001-006)

Interstellar propagation calculations for cosmic rays, He-4 - Ni-64, are compared with currently available abundance ratios for B/C and sub-Fe/Fe. The calculations show that an exponential pathlength distribution (leaky box model) cannot reproduce both secondary to primary ratios in the interval 0.5-1 GeV/n unless some values of the propagation parameters are modified. The calculated ratios are shown to be particularly sensitive to the adopted cross sections, the presence of the sub-Fe elements in the source regions, the shape of the source energy spectrum, and ionization energy loss. THE COSMIC RAY POSITRON SPECTRUM
R. J. PROTHEROE (NASA, Goddard Space Flight Center, Laboratory for High Energy Astrophysics, Greenbelt, MD) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 198-201. refs

A calculation is made of the flux of secondary positrons expected above 100 MeV for various disk-halo diffusion models, which are consistent with the observed grammage and Be-10 abundance. It is found that models which give a high surviving fraction of Be-10 (about 0.3) give a secondary positron spectrum which is consistent with the observations, while a model predicting a low Be-10 abundance (about 0.1 surviving) gives a poorer fit at high energies hinting at the presence of a primary positron component. Implications of these results are discussed. (Author)

A82-22543
THE ELECTRON AND POSITRON SPECTRA IN PRIMARY COSMIC RAYS
L. C. TAN and L. K. NG (University of Hong Kong, Hong Kong) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 202-205. refs

It is contended that variations in the results of various authors' positron calculations derive mainly from differences between the local interstellar electron spectrum and those derived from radio data. It is found that, among the spectra derived from radio data, that of Rockstroh and Webber (1978) is the most consistent with the description using the usual 'leaky box' model. In addition, it is shown that the electron injection spectrum with a single power law cannot satisfactorily explain the primary electron spectrum. Analysis also shows that the leaky box model is able to account for the mean behavior of interstellar positrons and electrons in a cosmic ray containment volume whose galactic scale height and width around the earth are, respectively, 0.5-1 kpc and 2-3 kpc. C.R.

A82-22544
COMPARISON OF THE MEASURED ANTIPROTON FLUX WITH THAT PREDICTED BY THE 'LEAKY BOX' MODEL
L. C. TAN and L. K. NG (University of Hong Kong, Hong Kong) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 210-213. refs

A82-22552
STEADY-STATE COSMIC RAY ELECTRON SPECTRUM UNDER DIFFUSION, CONVECTION, ADIABATIC DECELERATION AND SYNCHROTRON LOSSES
I. LERCHE (Chicago, University, Chicago, IL) and R. SCHLICKE6SER (Max-Planck-Institut fur Radioastronomie, Bonn, West Germany) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. (Contract DFG-SCHL-201/1)

A82-22557

MASS PER CHARGE RATIO IN HOT PLASMAS AND COSMIC RAY SOURCE COMPOSITION

C. J. CESARSKY, R. ROTHENFLUG, and M. CASSE (Commissariat a l'Energie Atomique, Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, Essonne, France) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 269-272. refs

Some models of shock acceleration of cosmic rays assume that particles are injected out of the thermal plasma behind the shock and are selected according to their effective charge (Eichler, 1979; Ellison et al., 1981). The pattern of compositions that could emerge from such a selection starting from plasmas in ionization equilibrium at various temperatures greater than or equal to 100,000 K and containing no grains is considered. It is found that, in the case of steady state ionization equilibrium and of time-dependent cooling of a hot plasma, which are possible descriptions of the hot ISM and of the halo gas, it is not possible to reproduce the observed cosmic ray composition with this simple scheme. (Author)

A82-22559

PHYSICAL STATE OF THE BIRTH PLACE OF COSMIC RAYS AND ITS IMPLICATION TO THE ACCELERATION PROCESSES

K. SAKURAI (Kanagawa University, Yokohama, Japan) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 277-280. refs

To explain the observed chemical composition of galactic cosmic rays at their sources, it is suggested that this composition is the result of an acceleration mechanism, possibly related to the charge states of particles ambient in the source regions. Since it is likely that most of the particles are partially ionized in these regions, the ambient temperature there will be less than 100,000 K before the start of acceleration. C.R.

A82-22560

ON VOLATILITY, FIRST IONIZATION POTENTIAL, AND S- AND R-PROCESSES

J. P. MEYER (Commissariat a l'Energie Atomique, Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, Essonne, France) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 281-284. refs

The possibility of a correlation between the first ionization potential and volatility (in that elements of low potential tend to be refractory and those of high potential volatile) is considered. It is noted that the apparent correlation between galactic cosmic ray source (GCRS) elemental abundances and the first ionization potential may in fact be based on volatility. Attention is given here to compositional clues which may determine whether volatility or the first ionization potential is the relevant parameter. The correlation between the first ionization potential and volatility is examined, and those elements which do not fit into the correlation are isolated. Attention is also given to possible ambiguities in interpreting the charge spectrum beyond Ni that derive from coincidences between regions of change in the first ionization (and volatility) and the s- and r-process peaks. C.R.

A82-22561

INTERSTELLAR GRAINS AS SEEDS FOR GALACTIC COSMIC RAYS

J.-P. BIBRING (CNRS, Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse, Orsay, Essonne, France) and C. J. CESARSKY (Commissariat a l'Energie Atomique, Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, Essonne, France) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 289-291. refs

A82-22563

ORIGIN OF GALACTIC COSMIC RAYS FROM NE ISOTOPIC COMPOSITION

J. AUDOUZE (CNRS, Institut d'Astrophysique, Paris; CNRS, Centre de Spectrometrie Nucleaire et de Spectrometrie de Masse, Orsay, Essonne, France), M. CASSE, J. A. PAUL (Commissariat a l'Energie Atomique, Centre d'Etudes Nucleaires de Saclay, Gif-sur-Yvette, Essonne, France), J. P. CHIEZE (CNRS, Institut d'Astrophysique, Paris; Centre d'Etudes Nucleaires de Bruyere-le-Chatel, Montrouge, Hauts-de-Seine, France), and G. MALINIE (CNRS, Institut d'Astrophysique, Paris, France) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 296-298. refs

The possibility that a cosmic ray composition reflecting that of the interstellar medium may account for the observed enhancement of the cosmic ray Ne-22/Ne-20 abundance ratio with respect to the solar value is examined. Processes leading to the observed solar system abundances of Ne-22 are discussed, and it is suggested that explosive hydrogen burning might be a significant source, since secondary production of this isotope as a by-product of the CNO cycle in intermediate and massive stars is incapable of accounting for the present abundance. Calculations are presented which show that neither Ne-22 enrichment of the interstellar medium by low-mass stars after the birth of the sun nor a cosmic ray origin in the inner galaxy account for the observed cosmic ray enrichment. It is thus concluded that Ne-22 cannot have been significantly enriched in the interstellar medium during the last 4.6 billion years, and thus cosmic rays are accelerated in the vicinity of Ne-22 sources. A.L.W.

A82-22564

EVIDENCE FOR THE STOCHASTIC ACCELERATION OF COSMIC RAYS IN SUPERNOVA REMNANTS

T. W. HARQUIST (University College, London, England) and G. E. MORFILL (Max-Planck-Institut fuer Kernphysik, Heidelberg, West Germany) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 300-302. refs

Ionization rates in several locations in an expanding shell, probably formed by the passage of a shock driven by the expansion of an old supernova remnant in the Per OB2 association, have been derived from molecular observations. The production of 1-2 MeV cosmic rays by the second order Fermi mechanism in the ionized regions of the remnant would explain these and a number of other molecular observations. (Author)

A82-22565

THE GALACTIC ORIGIN OF COSMIC RAYS. I

S. A. COLGATE (Los Alamos National Laboratory, Los Alamos; New Mexico Institute of Mining and Technology, Socorro, NM) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 303-306. refs

(CONF-810711-1; LA-UR-81-965)

The theoretical basis for the supernova envelope shock origin of cosmic rays is reviewed. The theoretical explanation of the SN Type I light curve requires the ejection of a relativistic mass fraction. The criterion of the adiabatic deceleration by Alfven wave trapping neither applies in theory, when beta is greater than 1, or practice, as in the Starfish high-altitude nuclear explosion experiment. Arguments of delayed acceleration due to K-capture are not applicable to SN ejecta because a period of prompt recombination exists before subsequent stripping in propagation. (Author)

A82-22571

ORIGIN OF COSMIC RAYS IN GALACTIC CENTRE SOURCES

S. S. SAID, A. W. WOLFENDALE (Durham, University, Durham, England), M. GILER (Lodz, Uniwersytet, Lodz, Poland), and J. WDOWCZYK (Instytut Badan Jadrowych, Lodz, Poland) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 344-347. refs

A model is proposed which attributes the origin of cosmic rays to rare explosive events in galactic nuclei. In accordance with the model, the individual explosions are separated by times of the order of 100 million years, and the duration of each explosion is much shorter than the period of separation. Particles produced with a power-law spectrum would propagate by diffusion throughout the Galaxy, and in its simplest form, there would be simple three-dimensional diffusion with a diffusion coefficient independent of position. The proposed model could provide an explanation for the very low electron-to-proton ratio (about 3 percent at 1 GeV) of cosmic radiation at the earth. V.L.

A82-22572

ACCELERATION PROCESSES NEAR MASSIVE BLACK HOLES

M. KAFATOS (George Mason University, Fairfax, VA), R. SILBERBERG, and M. M. SHAPIRO (U.S. Navy, Naval Research Laboratory, Washington, DC) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 348-351. refs

Ultra-massive accreting black holes in the nuclei of active galaxies have been proposed as the central sources of energy emission, especially of the nonthermal kind. Accretion disks around massive black holes in the centers of active galactic nuclei are shown to be likely sites of particle acceleration. Electrons can be accelerated to relativistic energies by electromagnetic processes as well as purely gravitational processes (e.g., Penrose pair production). Protons are also accelerated to very high energies by processes such as (1) Fermi acceleration, (2) betatron acceleration, (3) shock wave acceleration, and (4) in beams via the electromagnetic dynamo process. The stochastic Fermi process acting over a period of only about a day in the ergosphere suffices for efficient acceleration of protons, even to high energies. (Author)

A82-22584* National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, Md.

INTERPLANETARY PARTICLE OBSERVATIONS ASSOCIATED WITH SOLAR FLARE GAMMA-RAY LINE EMISSION

T. T. VON ROSENVINGE, R. RAMATY, and V. REAMES (NASA, Goddard Space Flight Center, Laboratory for High Energy Astrophysics, Greenbelt, MD) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 28-31. refs

Observations of particle emissions during three solar flares which were observed to emit 2.22 MeV gamma rays as recorded by the Solar Maximum Mission are discussed. The 2.22 MeV line is produced by neutron capture by hydrogen, and additional attention is given to a 4.4 MeV emission line of June 7, 1980, with estimates made of the particle density 1 AU from the sun assuming a good magnetic connection between the earth and the sun. The measurements were made from the ISEE-3 and HELIOS-1 spacecraft. The connectedness of the earth and the sun in a magnetic field leads to conclusions that few particles actually escaped into interplanetary space. M.S.K.

A82-22587

COMPUTER SIMULATION OF THE TIME DEPENDENCE OF THE PHOTON ENERGY SPECTRA PRODUCED IN PROTON AND ELECTRON BREMSTRAHLUNG

S. R. KELNER, IU. D. KOTOV, A. S. ROSHAL, and V. N. RUSSKIKH (Moskovskii Inzherno-Fizicheskii Institut, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 41-44. refs

An analytic model of the time dependence of the photon generation spectra resulting from proton and electron bremsstrahlung in matter is presented. The lifetimes of the protons and electrons with the same Lorentz factor are shown to differ by a factor of at least three, which implies that the time dependence of photon energy spectra resulting from pulse beam injection of accelerated particles into a generation region depends on the types of particles accelerated. Basic equations are formulated for the evolution of the proton distribution function in matter, with consideration given to path lengths which remain or pass from the matter. The proton energy spectrum is then defined and the generation function for the production of gamma rays in a target block is derived, taking into account the density of the target. Similar calculations for electrons showed that with time the energy spectra becames harder for electrons. M.S.K.

A82-22589

POSSIBLE EVIDENCE FOR ATTENUATION OF AN MHD SHOCK BY A MAGNETIC NEUTRAL SHEET IN THE SOLAR CORONA

D. J. MULLAN (Franklin Institute, Bartol Research Foundation, Newark, DE) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 51-54. refs

(Contract NSF ATM-78-20936-01)

The possibility that H-alpha filaments in the solar chromosphere are markers beneath regions where coronal shocks experience severe attenuation, and are thus the areas where particles can be ejected from the corona, is examined from data from flares of Aug. 4, 1972 and Nov. 9, 1979. Both flares produced gamma rays with 2.2 MeV energy, and data exists for the energetic protons received at earth stations. The efficiency of transport was high for the August event and two magnitudes lower for the November event. H-alpha filtergrams of the two flares show that in the second flare the shock propagation crossed two or three filaments lying in its path. The low efficiency of particle transport is taken to indicate a degraded shock in the region above the filaments, indicating that the particles needed a different route to escape. M.S.K.

A82-22591* Chicago Univ., Ill.

THE RELATION OF TYPE II RADIO BURSTS TO SOLAR ENERGETIC PARTICLES OBSERVED AT EARTH

P. EVENSON, P. MEYER (Chicago, University, Chicago, IL), and S. YANAGITA In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 59-62. refs

(Contract NAS5-20674)

Observations of particle events associated with type II radio bursts as recorded on the ISEE-3 spacecraft are reported. Data on burst events following flares of Sept. 23,1978 and Aug. 18, 1979 yield time histories of the particle fluxes, which exceeded 25 MeV energy. The profiles of the Category-1 type II bursts display a continuous release of particles, which was concluded by no decrease in the fluxes until after the passage of the shock. The continuous nature of the recorded events suggests that the secondary acceleration process associated with the type II bursts is maintained as the flare shock propagates through interplanetary space, and may be the source of the energetic particles which propagate with the shock. M.S.K.

A82-22592* National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, Md.

A SURVEY OF SOLAR PROTONS AND ALPHA DIFFERENTIAL SPECTRA BETWEEN 1 AND GREATER THAN 400 MEV/NUCLEON

R. E. MCGUIRE, T. T. VON ROSENVINGE, and F. B. MACDONALD (NASA, Goddard Space Flight Center, Greenbelt; Maryland, University, College Park, MD) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 65-68. refs

Attempts to systematically measure and fit a large sample of flare spectra from IMP 7 and 8 satellite data to determine the spectral forms that characterize the data and the range of spectral slopes are reported. Proton spectra are constructed covering the range 0.9 to over 400 MeV, and alpha fluxes from 1.4-80 MeV/nucleon. The event spectra are composed of fluxes measured at different times at each energy, and fitting procedures were employed such as a power law in kinetic energy, an exponential in rigidity, an exponential in energy, and a Bessel function of momentum/nucleon. Best fits were obtained with the exponential in rigidity and the Bessel function, with the Bessel function having a better numerical accuracy for all 21 proton spectra considered. M.S.K.

ENERGETIC SOLAR PARTICLE SPECTRA ACCORDING TO VENERA-11, 12 AND PROGNOZ-5, 6

V. G. KURT, IU. I. LOGACHEV, V. G. STOLPOVSKII, and E. I. DAIBOG (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 69-72. refs

Proton and electron spectra of solar flares measured from 0.1-500 MeV and 0.03-3.0 MeV, respectively, on board the Venera 11, 12, and the Prognoz 5, 6, satellites are reported, along with analyses of the integral peak flux and density dependence in relation to the kinetic energy. All the spectra were fitted by either one or a set of two power functions, with the proton spectra having more complicated characteristics than the electron spectra. The number of high energy protons undergoing stochastic particle propagation was found to depend on the shock wave speed. Energy losses were calculated on the basis of deviation from a power law, of a deceleration down to the observation point, and from a numerical estimate of the rate of proton energy change in the adiabatic solar wind expansion. An event of Nov. 22, 1977 is notable for the absence of protons with energy less than 1 MeV. M.S.K.

EVOLUTION OF THE SOLAR PROTON SPECTRUM IN INTERPLANETARY SPACE

N. N. KONTOR (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 73-76. refs

Exponential forms suitable for describing two-three orders wide energy ranges of proton spectra emitted during solar flares are examined. The rigidity exponent form shows a good fit over a broad range except during the onset of a proton shower. A parabolic spectral shape is presented which becomes a power law at narrower energy ranges. Application of the parabolic formula to available flare data reveals that energetic protons arrive first at the detectors, followed by lower energy particles. M.S.K.

A DESCRIPTION OF RELATIVISTIC SOLAR PARTICLE PROPAGATION

H. DEBRUNNER, H. NEUENSCHWANDER, A. F. WAGNER (Bern, Universitaet, Berne, Switzerland), and J. A. LOCKWOOD (New Hampshire, University, Durham, NH) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 102-105. Research supported by the Swiss National Science Foundation and NSF.

The intensity-time profiles and anisotropies of the solar cosmic-ray ground level events (GLEs) on November 22, 1977 and May 7, 1978 were addressed by means of a Monte Carlo simulation of relativistic solar flare protons propagation in the interplanetary magnetic field. Pitch angle scattering mean free paths of 0.5 AU and more than 3 AU are deduced. The injection of the solar flare protons has an extended time structure, correlated with the X-ray burst profiles in the 1-8 A and 0.5-4.0 A bands, respectively, for the November 1977 and May 1978 GLEs. O.C.

NON-FLARE INJECTION OF PROTONS INTO INTERPLANETARY SPACE

V. DOMINGO, B. SANAHUJA, and K.-P. WENZEL (ESA, Space Science Dept., Noordwijk, Netherlands) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 109-112. refs

The superimposition of a second proton population associated with a solar wind regime, and bounded by a pair of shocks, is found to be superimposed upon the first in an investigation of 35-1600 KeV solar protons observed during an April, 1979 nonflare event by ISEE-3. The source of the particles and the solar wind regime appear to be closely associated with intense solar filament activity near the central meridian. The temporal evolution of velocity spectra and anisotropy distributions during this period are discussed. O.C.

A82-22602

LOW-ENERGY PARTICLES IN INTERPLANETARY MAGNETIC FIELD NEAR THE SECTORIAL BOUNDARY ON SEPTEMBER 26, 1977

M. A. ZELDOVICH and B. M. KUZHEVSKII (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 113-116. refs

Prognoz-6 data are used to examine effects of the sign reversal in the interplanetary magnetic field of September 26, 1977 on the 70-keV to 40 MeV proton fluxes, and the 10-30 keV and 40-500 keV electron fluxes. The sectorial boundary of interplanetary magnetic field traversed the earth at 2300 UT, and in that period the interplanetary space was filled with the solar cosmic ray particles generated in the flare of September 24, 1977, whose intensity decreased in time. Results indicate that the event of September 26, 1977 was the first observation where effects of the sectorial boundary were traced up to proton energies of 40-50 MeV. D.L.G.

A82-22610

COULOMBIAN ENERGY LOSSES AND THE NUCLEAR COMPOSITION OF THE SOLAR COSMIC RAYS

S. S. TRIVEDI and S. BISWAS (Tata Institute of Fundamental Research, Bombay, India) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 157-160. refs

Coulombian energy losses suffered by fast ions in a two component plasma are discussed quantitatively. Their dependence on the temperature and density of the ambient plasma is also investigated. It is shown that these losses coupled with the transient nature of the flare can give rise to selectivity effects. The ionic charge states are also discussed. (Author)

HEAVY-ELEMENT ABUNDANCES IN HE/3/-RICH EVENTS
D. V. REAMES and T. T. VON ROSENVINGE (NASA, Goddard Space Flight Center, Laboratory for High Energy Astrophysics, Greenbelt, MD) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 162-165. refs

Abundances of the elements He through Fe observed on the ISEE-3 during He(3) rich events are reported. Ratios of He(3)-He(4) of not less than about 1, and Fe/O of greater than 1 are found, and rather large event-to-event variations in C, O, Ne, Mg, Si, and S are seen superposed upon the general trend of heavy element enhancement. It is concluded that the discontinuous variation of the neighboring elements in the He(3) rich events could result from differences in the electron temperature of the material prior to injection that give rise to differences in the dominant charge states and cyclotron frequencies of different elements. (Contract BMFT-RV14-B8/74; NAS5-20062)

He isotopes, O and Fe in He(3) rich solar flares are studied during the 1977 to 1979 period with the MPI/UoMd particle experiment on ISEE-1 and ISEE-3. The study revealed that the He(3) spectrum is generally harder than that of He(4), and the O spectrum is harder than that of Fe. The spectra are compared with a stationary model based on stochastic Fermi acceleration in Alfven turbulence including a rigidity dependent particle loss. Model calculations fit the He(3) and He(4) spectra between 0.4 and 4.0 MeV/nucleon, with discrepancies at lower and higher energies, and the O and Fe spectra cannot be fitted simultaneously. D.L.G.

Observations on proton spectra of solar flare GLEs and data from a latitude survey are used to determine specific yield functions for the neutron moderated detector (4NMD) and the 3NM64 neutron monitor at Sanae, Antarctica. Monthly average count rates of the 4NMD and 3NM64 do not follow each other better than 1 percent on long term modulation. No definite physical explanation is singled out to account for the observed excessive variability, which is presumably related to a phase lag effect or hysteresis effect between changes in intensities of particles of different rigidities and the level of solar modulation. COLOR AERIAL PHOTOGRAPHY IN THE PLANT SCIENCES AND RELATED FIELDS; PROCEEDINGS OF THE EIGHTH BIENNIAL WORKSHOP, LURAY, VA, APRIL 21-23, 1981
Workshop sponsored by the Society of American Foresters, American Society of Photogrammetry, U.S. Geological Survey, et al. Falls Church, VA, American Society of Photogrammetry, 1981. 174 p $20

Aerial photography methods, equipment, targets, and the effectiveness of remote sensing of vegetation are discussed. Analysis with color or IR equipment is examined, and color aerial photography of riparian vegetation in northeastern California, wildlife on an island, and the use of color IR photography for vegetative monitoring are described. Specific photography of loblolly pine plantations, Alaskan resources, forest land changes, rangeland cover proportions, Oregon vegetation, and fir trees infested by beetles are considered. Spectral scanning of SO2-affected winter wheat and soybeans is presented, along with IR color photography of damaged citrus crops, the application of a scanning microdensitometer in plant science studies, and the development of an IR exposure meter. M.S.K.

A82-29527
DEVELOPMENT AND APPLICATION OF PANORAMIC AERIAL PHOTOGRAPHY IN FOREST PEST MANAGEMENT
W. M. CIESLA (U.S. Forest Service, Davis, CA) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 19-28. refs

Characteristics of panoramic aerial photography and its use in forest pest management are reviewed. Applications to date include estimating losses caused by the mountain pine beetle and planning salvage operations of insect killed timber in California. Advantages of the optical bar panoramic aerial camera system include the ability to acquire high-resolution photography over large areas of land rapidly. Disadvantages include a relatively high acquisition cost, a limited acquisition capability, unconventional film size, and a changing photo scale. (Author)

CONSIDERATIONS IN USING COLOR INFRARED PHOTOGRAPHS FOR VEGETATIVE INTERPRETATION

P. M. SEEVERS (U.S. Geological Survey, EROS Data Center, Sioux Falls, SD) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 45-49. refs

The literature suggests that the infrared wavelengths are the most significant when color infrared film records the reflectance of vegetation. Some evidence, however, suggests that the relative sensitivity of the infrared sensitive emulsion layer of the film and the apparent intensity of near infrared reflectance from plants combine to saturate that layer when the film is used to photograph agricultural crops at low altitude. In addition, some physiological considerations of plant characteristics also suggest that the red- and green-sensitive emulsion layers would be affected before the infrared-sensitive layer. Observations indicate that tissue damage in most crops is relatively severe before it becomes detectable on color infrared film. It is also then visible to the human eye. This effect suggests that previsual detection of crop damage is not likely on color infrared film. Furthermore, the perceptability of color contrasts by the human eye tends to be a deterrent to visual detection of plant symptoms, both in the field and in the interpretations of color-infrared photographs. MULTI-RESOURCE INVENTORY IN INTERIOR ALASKA

K. M. HEGG (U.S. Forest Service, Washington, DC), F. R. LARSON, D. R. MEAD, and K. C. WINTERBERGER (Pacific Northwest Forest and Range Experiment Station, Anchorage, AK) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 59-65. refs

Data reduction, conversion, and application of NASA small scale color IR photography for Alaskan renewable resource evaluation are described. The photographs are taken at a 1:120,000 scale, and special overlay ink and film allow suitable definitions of forest and woodland, although brush heights and tundra are undiscernable. The study is concentrated along the Susitna River basin, where rapid development is occurring along the road between Anchorage and Fairbanks. Interpretation involves classification of forest, woodland, nonforest, and nonvegetated groups, with forest and woodland further defined into closed or open crown areas, depending on exceeding 50% cover. It is recommended that relating ground sample selection based on photopoint interpretation to a digitized map be accomplished by completing the map digitization prior to field plot selection, and statistically tieing photointerpretation sampling schemes to detailed inplace digitized map sampling schemes. M.S.K.

A82-29533

APPLICATION OF 35MM COLOR AERIAL PHOTOGRAPHY TO FOREST LAND CHANGE DETECTION

N. L. MILLER and M. P. MEYER (Minnesota, University, St. Paul, MN) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 67-72. Research sponsored by the U.S. Forest Service.

Attention is called to the high cost ($280 per plot) of examining the sample plots that form the data base in forestry surveys. The use of 35-mm color aerial photography for detecting change in these plots is investigated. With the method envisaged here, only those sample plots found to be significantly changed (logging, fire, blowdown, insect damage, disease) would be examined; the rest would be updated by computer growth projection models. Trial runs with 35-mm color aerial photography in Minnesota and Michigan yielded good results at a cost estimated at $20 per plot. C.R.

REMOTE SENSING OF DOUGLAS-FIR TREES NEWLY INFESTED BY BARK BEETLES

P. M. HALL, P. A. MURTHA, and J. A. MCLEAN (British Columbia, University, Vancouver, Canada) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 91-98, 157. refs

Two study plots containing Douglas-fir (Pseudotsuga menziesii /Mirb/ Franco) newly infested by Douglas-fir beetle (Dendroctonus pseudotsugae Hopk.) were photographed with large-scale (1:1000), color infrared film on July 29, 1979 - approximately three months after possible insect attack. Significant differences were found between the ratios of the optical density values of the images of healthy and attacked trees. It is concluded that trees which have been successfully attacked by beetles can be detected on color infrared air photos approximately three months after initial attack when the trees still support visually green, healthy-appearing foliage. (Author)

SPECTRAL SCANNING OF EXPERIMENTAL PLOTS OF SO2-AFFECTED WINTER WHEAT AND SOYBEANS FOR MISSION PLANNING

C. D. SAPP (Tennessee Valley Authority, Chattanooga, TN) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 101-114. refs

A series of TVA experiments is described wherein plots of soybeans and winter wheat plants were grown to the critical seed-filling stage of development, exposed to controlled doses of SO2, observed systematically for foliar effects, then scanned row by row with a spectroradiometer. The spectral curves were statistically analyzed to determine the changes in spectral reflectance that occur after plants are stressed by SO2 emissions. For soybeans, the affected subplots had higher visible reflectance, lower IR reflectance, and a lower IR/red ratio. Variance analysis showed significant differences in IR and IR/red reflectance between chlorotic soybeans and unaffected ones; and in red reflectance, IR reflectance and IR/red ratio between necrotic and unaffected ones. Since the wheat subplots showed no chlorosis, analysis of reflectance data concentrates on necrosis, which showed a significant difference in red, IR, and IR/red reflectance between classes of differentially injured wheat. DETECTION AND DAMAGE ASSESSMENT OF CITRUS TREE LOSSES WITH AERIAL COLOR INFRARED PHOTOGRAPHY /ACIR/

C. H. BLAZQUEZ, F. W. HORN, JR. (NASA, Kennedy Space Center, Applications Projects Branch, Cocoa Beach, FL), and G. J. EDWARDS (Florida, University, Lake Alfred, FL) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 115-126. refs

Detection and disease damage assessment of citrus tree losses in a Florida citrus grove were made by establishing a registration (grove site location) coordinate system, developing a damage assessment system, and testing sequential aerial color infrared (ACIR) photography at the scale of 1 in. = 333 ft (2.5 cm = 100 m) during the winter, spring, and summer seasons of 1978 and spring of 1979. Spring photography was the easiest to photo interpret, showed the greatest differences between healthy and diseased trees, and had the least shadow and background interference for photo interpretation. Trees showing slight disease damage were detected in ACIR before they were found in ground surveys. (Author)

DESERT LOCUST HABITAT MONITORING WITH SATELLITE REMOTE SENSING A NEW TECHNOLOGY FOR AN OLD PROBLEM

J. U. HIELKEMA (United Nations, Food and Agriculture Organization, Rome, Italy) ITC Journal, no. 4, 1981, p. 387-417. refs

Precipitation and vegetation remote sensing techniques developed during Phase I of the UN Food and Agricultural Organization program to monitor rainfall and vegetation conditions known to presage desert locust plagues are described. Landsats 2 and 3 multispectral scanners were used, along with Tiros-N and Meteosat and Goes satellite data, to quantify the location, extent, duration, and intensity of rainfall events in the recession area, that region where locusts live as ordinary grasshoppers until conditions which lead to population explosions and subsequent swarming are present. Outbreak areas were sought, along with ecological conditions which induced the outbreaks. Landsat data handling procedures are reviewed, and it is noted that mosaic image construction has resulted in the construction of 10 maps for the north Africa locust recession area of Morocco, Algeria, Tunisia, and Libya. M.S.K.

PANORAMIC AERIAL PHOTOGRAPHY IN FOREST PEST MANAGEMENT

W. M. CIESLA (U.S. Forest Service, Fort Collins, CO), R. A. ALLISON (U.S. Forest Service, Washington, DC), and F. P. WEBER (U.S. Forest Service, Houston, TX) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 719-723. refs

The combination of high image resolution and large-area coverage inherent in panoramic photography is shown to make possible 100% coverage of forest pest outbreak areas, as well as the extraction of both stratification and detailed crown counts from a single set of photos. Attention is given to the deployment of the KA-80A optical bar panoramic camera aboard the U-2 high-speed, high-altitude aircraft operated by NASA. Continuous coverage of forested areas allows photos acquired for vegetation damage assessment to be used by such other disciplines as land-use planning, watershed evaluation, road location, or timber-sale planning, suggesting the sharing of photo-acquisition costs. Unfortunately, no aircraft other than the U-2, with its 65,000-foot cruise altitude, is able to use this camera system efficiently. O.C.

OPTICAL BAR PANORAMIC PHOTOGRAPHY FOR PLANNING TIMBER SALVAGE IN DROUGHT-STRESSED FORESTS

J. CAYLOR, J. PIERCE, and W. SALAZAR (U.S. Forest Service, San Francisco, CA) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 749-753. refs

Panoramic aerial photographs were obtained over 40 million acres of forest land in northern California during the period July, 1978, through September, 1979. These were used as an aid in planning timber salvage sales to locate concentrations of bark beetle-caused tree mortality following a severe drought. Several innovative procedures devised to effectively use these unconventional format photographs under field conditions are described. The photos were used in 223 salvage sales, resulting in a harvest of 532.2 million board feet of bark beetle killed timber during the period July, 1978, through May 1979. (Author)

A82-32707
EVALUATION OF SPRUCE-FIR FORESTS USING SMALL-FORMAT PHOTOGRAPHS
J. MCCARTHY (Vermont, University, Burlington, VT), C. E. OLSON, JR., and J. A. WITTER (Michigan, University, Ann Arbor, MI) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 771-778. Research supported by the McIntire-Stennis Funds and University of Michigan; U.S. Department of Agriculture refs
(Contract USDA-23-178)

The effectiveness of large-scale, 1:4800 small-format color aerial photographs in the evaluation of tree conditions and identification of the balsam fir and white spruce hosts of the spruce budworm is assessed. Contingency tables allowed comparisons of tree condition and species identification from aerial and ground data. It is shown that photointerpretation of small-format photographs provided mean aerial estimates of tree conditions within one-half of a ranking class of the mean from ground truth data, with balsam fir and white spruce separable at a frequency of 80% and host specie mortality aerial estimates within 10% of the ground test data. THE RESPONSE CHARACTERISTICS OF VEGETATION IN LANDSAT MSS DIGITAL DATA
K. R. MCCLOY (South Australian Institute of Technology, Ingle Farm, Australia) Remote Sensing of Environment, vol. 10, Nov. 1980, p. 185-190. refs

Empirical evidence is used to propose a model of the response due to a vegetative canopy. The model is a simplification, and hence approximation, of the complex relationship between physical conditions in the canopy and the resultant spectral reflectance. However, the model can be quantified to yield at least two, and possibly more, independent response parameters from the Landsat response data. These independent response parameters can be used to derive estimates of more than one independent physical characteristic of the canopy. Further, the model specifies its limitations, for a given data input; and indicates how further auxiliary data may be used to extract more information from the model. (Author)

FIELD SIZE, LENGTH, AND WIDTH DISTRIBUTIONS BASED ON LACIE GROUND TRUTH DATA
D. E. PITTS and G. BADHWAR (NASA, Johnson Space Center, Houston, TX) Remote Sensing of Environment, vol. 10, Nov. 1980, p. 201-213. refs

The development of agricultural remote sensing systems requires knowledge of agricultural field size distributions so that the sensors, sampling frames, image interpretation schemes, registration systems, and classification systems can be properly designed. Malila et al. (1976) studied the field size distribution for wheat and all other crops in two Kansas LACIE (Large Area Crop Inventory Experiment) intensive test sites using ground observations of the crops and measurements of their field areas based on current year rectified aerial photomaps. The field area and size distributions reported in the present investigation are derived from a representative subset of a stratified random sample of LACIE sample segments. In contrast to previous work, the obtained results indicate that most field-size distributions are not log-normally distributed. The most common field size observed in this study was 10 acres for most crops studied. G.R.

VIEW ANGLE EFFECTS IN THE RADIOMETRIC MEASUREMENT OF PLANT CANOPY TEMPERATURES
D. S. KIMES (NASA, Goddard Space Flight Center, Earth Resources Branch, Greenbelt, MD), S. B. IDSO, P. J. PINTER, JR., R. J. REGINATO, and R. D. JACKSON (U.S. Water Conservation Laboratory, Phoenix, AZ) Remote Sensing of Environment, vol. 10, Dec. 1980, p. 273-284. refs

The thermal infrared sensor response from a wheat canopy was extremely non-Lambertian because of spatial variations in energy flow processes; the effective radiant temperature of the sensor varied as much as 13 C with changing view angle. This variation of sensor response was accurately quantified (root-mean-square of deviations between theoretical and measured responses reduced to 1.1 C) as a function of vegetation canopy geometry, vertical temperature distribution of canopy components, and sensor view angle. The results have important implications for optimizing sensor view angles for remote sensing missions. (Author)

EVALUATION OF NOAA-AVHRR DATA FOR CROP ASSESSMENT
M. J. DUGGIN, D. PIWINSKI (New York, State University, Syracuse, NY), V. WHITEHEAD, and G. RYLAND (Lockheed Engineering and Management Services Co., Inc., Houston, TX) Applied Optics, vol. 21, June 1, 1982, p. 1873-1875. refs
(Contract NAS9-16514)

A study has been carried out in order to determine the angular limits which should be imposed upon NOAA06 and -7 satellite advanced very high-resolution radiometer (AVHRR) data used in vegetation assessment. The study involved simulations of anticipated sensor output over a wheat crop and empirical investigation of sensor data over vegetated areas. The conclusion drawn from both approaches is that less than 10% variation in the simulated vegetative index may be anticipated across the swath of imagery used if only the central 512 pixels are utilized. V.L.

INTERPRETATION OF VEGETATIVE COVER IN WETLANDS USING FOUR-CHANNEL SAR IMAGERY

E. WEDLER (Ontario Centre for Remote Sensing, Toronto, Canada) and R. KESSLER (Freiburg, Universitaet, Freiburg im Breisgau, West Germany) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 111-124. refs

As a part of a Canada-West Germany scientific exchange program, SAR imagery obtained over areas in Southern Ontario was investigated. A unique and varied image response was noted at certain wetland sites. A description is provided of the results of an extension of the early observations to other wetland sites, taking into account preliminary correlations between the SAR image response and the wetland cover type. It was found that the effects produced by wetland conditions in Southern Ontario on SAR X- and L-band backscatter make it possible to interpret vegetative cover and moisture conditions from SAR imagery. X-band SAR is sensitive to smaller-scale vegetative content in the wetlands, while L-band SAR is sensitive to larger-scale vegetative content in the wetlands. G.R.

PROBLEMS ASSOCIATED WITH REMOTELY DETECTING AND MONITORING SALINE SITES WITHIN IRRIGATED ALBERTA

D. B. HARKER (Alberta Agriculture, Irrigation Div., Lethbridge, Canada) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 154-163. refs

Of the 400,000 ha of land irrigated in Alberta, from 10% to 30% has been estimated to be adversely affected by high water tables and soil salinity. To facilitate optimum rehabilitation planning, those lands which are affected or are likely to become affected under new irrigation must be identified and monitored. Over the last 25 years several attempts have been made to identify and monitor affected acreages using panchromatic air photos. Recently, 1:10,000 color and other photographic sensors and scales have been utilized and preliminary work with Landsat digital data has begun. In an evaluation of these activities, attention is given to mapping details, mapping efficiency, the affected area, visual pattern recognition problems, and ground truth requirements. Plans for future work are also discussed. G.R.

DEFINING THE TEMPORAL WINDOW FOR MONITORING FOREST CANOPY DEFOLIATION USING LANDSAT

R. F. NELSON (NASA, Goddard Space Flight Center, Earth Resources Branch, Greenbelt, MD) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 367-382. refs

An analysis of Landsat imagery of forested areas near Williamsport, Pennsylvania shows that the effects of defoliation by insects can be assessed over a two month period beginning in early June. Within this window heavily defoliated forest can be successfully delineated from moderately defoliated and healthy forest. Consequently, the effects of insect damage can be assessed at times other than peak defoliation, doubling the probability that useful satellite data can be acquired in the Williamsport area. (Author)

USE OF LANDSAT MULTISPECTRAL SCANNER DATA IN VEGETATION MAPPING OF A FORESTED AREA

S. KHORRAM and E. F. KATIBAH (California, University, Berkeley, CA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 383-392. refs

Landsat digital data combined with U-2 color infrared photography of the scale 1:120,000 are used for vegetation mapping of a forested area in northern California. The approach involves geometric correction of Landsat digital data, selection of ten training sites, unsupervised classification of training sites, and supervised classification of the entire study area. Best results for unsupervised classification are achieved when each training site is analyzed independently. USGS topographic maps of the scale 1:250,000 are useful in the location of control points, delineation of watershed boundary, and geometric correction of Landsat digital data. It is concluded that Landsat repetitive data are a useful means of mapping the area under investigation. D.L.G.

A82-34732

REMOTE SENSING - A POTENTIAL AID IN THE PREPARATION OF AN URBAN TREE INVENTORY

P. A. GOLDBERG In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 393-401. refs

Remote sensing is a reliable tool for the compilation of urban tree inventories. An assessment of the quantity and quality of the Omaha-Bellevue, Nebraska tree population was made the summer of 1979. After digitizing the data several analytical techniques were explored, among them factor analysis. Preliminary results indicated that the use of aerial surveys and computer analysis prove more cost effective and accurate than traditional forest field surveys. (Author)

MONITORING DEFORESTATION IN THE EASTERN PART OF THE STATE OF GUERRERO, MEXICO

D. RODRIGUEZ-BEJARANO (Guerrero, Universidad Autonoma, Chilpancingo, Mexico) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 402-411. refs

A research project carried out by the University of Guerrero to investigate deforestation and other land use and land cover changes is described. Landsat imagery, aerial photographs, and cartographic maps are used in determining changes in forest vegetation between 1972 and 1979. The area covered by forest fell from 112,250 hectares to 76,250 hectares. During the period investigated, the population density rose from 35 persons/sq km to 46 persons/sq km. The forest cover comprises tropical and semitemperate forests. C.R.

STATUS AND PROSPECTS OF THE AUTOMATED PROCESSING OF REMOTE-SENSING DATA /USING FOREST SURVEYS AS AN EXAMPLE/ [SOSTOIANIE I PERSPEKTIVY AVTOMATIZATSII OBRABOTKI AEROKOSMICHESKOI INFORMATSII /NA PRIMERE MATERIALOV S'EMKI LESA/]

V. I. SUKHIKH and R. I. ELMAN In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 80-85. In Russian.

Attention is given to the following techniques of the automated processing of remote-sensing data: the delineation of forest boundaries and homogeneous areas; the delineation of extended land areas and their schematic representation; and the determination of the reserves, completeness, diameter, and other characteristics of plantations. The automatic delineation of such land categories as forest-covered areas, fire-consumed areas, cleared spaces, and swamps is considered. It is shown that the most informative features for the determination of forest-evaluation indices are the combination of the image texture patterns of the delineated area with the landscape characteristics and generalized features of the external appearance of these images. REMOTE SENSING OF SALT MARSH VEGETATION IN THE FIRST FOUR PROPOSED THEMATIC MAPPER BANDS

J. T. C. BUDD (Portsmouth Polytechnic, Portsmouth, England) and E. J. MILTON (Southampton, University, Southampton, England) International Journal of Remote Sensing, vol. 3, Apr.-June 1982, p. 147-161. Research supported by Portsmouth Polytechnic and University of Reading. refs

The potential of the first four proposed TM bands for estimating above-ground biomass and discriminating species groups was evaluated in an area of intertidal salt marsh in Chichester Harbor, Southern England. Ground spectral data were collected using a portable multiband radiometer during August 1979. The correlation and variance-covariance matrices of the data are shown, as are the results of principal components analysis of the ground spectral data and of canonical variate analysis. Individual sites for four types of algae are graphed for principal components and canonical variates. For biomass estimation, the relationship between bidirectional reflectance and dry biomass is shown for the algae. C.D.

A82-37589

THE INFLUENCE OF SOIL CHARACTERISTICS ON REGIONAL CONVECTION DIFFERENCES ABOVE NORTHERN GERMANY [DIE AUSWIRKUNG VON BODENEIGENSCHAFTEN AUF DIE REGIONALEN KONVEKTIONSUNTERSCHIEDE UEBER NORDDEUTSCHLAND]

D. MUELLER and C. KOTTMEIER (Hannover, Technische Universitaet, Hanover, West Germany) Meteorologische Rundschau, vol. 35, June 1982, p. 84-91. In German. refs

The present investigation is concerned with the various factors which can affect the intensity of convection. Soil moisture and orography are found to have significant influence on the convection. Regional differences concerning soil and soil moisture are used as a basis to develop a map which can provide information regarding the local differences of the intensity of convection. The map shows good agreement with observations made by glider pilots above the North German Plain. However, in the mountainous area south of the northern lowlands, orography appears to have a greater effect than soil moisture. G.R.

A COMPARISON OF STRATIFIED VERSUS REGRESSION ESTIMATORS Final Report

H. C. TAKACS *In* Houston Univ. The 1981 NASA ASEE Summer Fac. Fellowship Program, Vol. 2 17 p 20 Aug. 1981 refs

Avail: NTIS HC A17/MF A01 CSCL 05B

LANDSAT data acquired over an agricultural area along with ground enumeration of the same area are used to obtain crop acreage estimates which are better (as measured in terms of bias and variance) than can be obtained from either data source alone. Two basic approaches considered within the AgRISTARS program are a stratified crop acreage estimator and a regression estimator. A statement of the problem was mathematically formulated and some theorems were proved which relate to the variance of the two estimators. For a particular set of data, the regression and stratified estimators are compared in terms of certain easily computed parameters. S.L.

The crop identification procedures used performed were for spring small grains and are conducive to automation. The performance of the machine processing techniques shows a significant improvement over previously evaluated technology; however, the crop calendars require additional development and refinements prior to integration into automated area estimation technology. The integrated technology is capable of producing accurate and consistent spring small grains proportion estimates. Barley proportion estimation technology was not satisfactorily evaluated because LANDSAT sample segment data was not available for high density barley of primary importance in foreign regions and the low density segments examined were not judged to give indicative or unequvocal results. Generally, the spring small grains technology is ready for evaluation in a pilot experiment focusing on sensitivity analysis to a variety of agricultural and meteorological conditions representative of the global environment. Over a two year period, data were collected regarding the canopies of soybeans grown in rows in planter boxes placed on a turntable in an effort to investigate changes in the spectral reflectance factor related to row direction, Sun direction, soil background, and crop development stage. Results demonstrate that the direction of rows in a soybean canopy can affect the reflectance factor of the canopy by as much as 230%. The results for the red spectral region tend to support the validity of canopy reflectance models; results for the infrared region do not. A.R.H.

Day-IR, day-visible, and night-IR image data sets were analyzed. All three images were contrast enhanced, using a linear stretch. The night-IR image was destriped using a box-car filtering approach. Apparent thermal inertia images were generated from the data. The enhanced data and the apparent thermal inertia image were also registered and overlayed onto shaded relief images depicting topography and onto a colored version of the Missouri geologic map. The combination of the apparent thermal inertial image and the shaded relief map proved to have the greatest discriminability in terms of portraying linear features. The reason seems to be that the vegetation canopy on the Ozark Plateau is different topography, tend to emphasize subtle topographic effects. E.A.K.

AGRISTARS: FOREIGN COMMODITY PRODUCTION FORECASTING. THE 1980 US CORN AND SOYBEANS EXPLORATORY EXPERIMENT Final Report

J. T. MALIN and J. G. CARNES, Principal Investigators Oct. 1981 183 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior and Agency for International Development ERTS

(Contract NAS9-15800; PROJ. AGRISTARS)

(E82-10206; NASA-CR-167485; JSC-17138; NAS 1.26:167485; LEMSCO-16573; FC-L1-04096) Avail: NTIS HC A09/MF A01 CSCL 02C

The U.S. corn and soybeans exploratory experiment is described which consisted of evaluations of two technology components of a production forecasting system: classification procedures (crop labeling and proportion estimation at the level of a sampling unit) and sampling and aggregation procedures. The results from the labeling evaluations indicate that the corn and soybeans labeling procedure works very well in the U.S. corn belt with full season (after tasseling) LANDSAT data. The procedure should be readily adaptable to corn and soybeans labeling required for subsequent exploratory experiments or pilot tests. The machine classification procedures evaluated in this experiment were not effective in improving the proportion estimates. The corn proportions produced by the machine procedures had a large bias when the bias correction was not performed. This bias was caused by the manner in which the machine procedures handled spectrally impure pixels. The simulation test indicated that the weighted aggregation procedure performed quite well. Although further work can be done to improve both the simulation tests and the aggregation procedure, the results of this test show that the procedure should serve as a useful baseline procedure in future exploratory experiments and pilot tests. M.G.

EVALUATION OF THE DORAISWAMY-THOMPSON WINTER WHEAT CROP CALENDAR MODEL INCORPORATING A MODIFIED SPRING RESTART SEQUENCE

T. W. TAYLOR, F. W. RAVET, and D. SMIKA, Principal Investigators Nov. 1981 11 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract PROJ. AGRISTARS)
(E82-10207; NASA-CR-167486; JSC-17801; NAS 1.26:167486; EW-U1-04212) Avail: NTIS HC A02/MF A01 CSCL 02C

The Robertson phenology was used to provide growth stage information to a wheat stress indicator mode. A stress indicator model demands two acurate predictions from a crop calendar: date of spring growth initiation; and crop calendar stage at growth initiation. Several approaches for restarting the Robertson phenology model at spring growth initiation were studied. Although best results were obtained with a solar thermal unit method, an alternate approach which indicates soil temperature as the controlling parameter for spring growth initiation was selected and tested. The modified model (Doraiswamy-Thompson) is compared to LACIE-Robertson model predictions. E.A.K.

AGRISTARS: SUPPORTING RESEARCH. SPRING SMALL GRAINS PLANTING DATE DISTRIBUTION MODEL

T. HODGES and J. A. ARTLEY, Principal Investigators Mar. 1981 33 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10208; NASA-CR-167487; JSC-16858; NAS 1.26:167487; LEMSCO-16018; SR-L1-04032) Avail: NTIS HC A03/MF A01 CSCL 02C

A model was developed using 996 planting dates at 51 LANDSAT segments for spring wheat and spring barley in Minnesota, Montana, North Dakota, and South Dakota in 1979. Daily maximum and minimum temperatures and precipitation were obtained from the cooperative weather stations nearest to each segment. The model uses a growing degree day summation modified for daily temperature range to estimate the beginning of planting and uses a soil surface wetness variable to estimate how a fixed number of planting days are distributed after planting begins. For 1979, the model predicts first, median, and last planting dates with root mean square errors of 7.91, 6.61, and 7.09 days, respectively. The model also provides three or four dates to represent periods of planting activity within the planting season. Although the full model was not tested on an independent data set, it may be suitable in areas other than the U.S. Great Plains where spring small grains are planted as soon as soil and air temperatures become warm enough in the spring for plant growth. DESCRIPTION OF HISTORICAL CROP CALENDAR DATA BASES DEVELOPED TO SUPPORT FOREIGN COMMODITY PRODUCTION FORECASTING PROJECT EXPERIMENTS

W. L. WEST, III, Principal Investigator Oct. 1981 19 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10209; NASA-CR-167488; JSC-17417; NAS 1.26:167488; LEMSCO-16929; FC-L1-04142) Avail: NTIS HC A02/MF A01 CSCL 02C

The content, format, and storage of data bases developed for the Foreign Commodity Production Forecasting project and used to produce normal crop calendars are described. In addition, the data bases may be used for agricultural meteorology, modeling of stage sequences and planting dates, and as indicators of possible drought and famine. M.G.

SPECTRAL PROPERTIES OF AGRICULTURAL CROPS AND SOILS MEASURED FROM SPACE, AERIAL, FIELD, AND LABORATORY SENSORS

M. E. BAUER, Principal Investigator, V. C. VANDERBILT, B. F. ROBINSON, and C. S. T. DAUGHTRY Nov. 1982 21 p refs Repr. from Proc. of the Intern. Arch. of Photogrammetry (West Germany), v. 23(B7), 1980 p 56-73 Presented at the 14th Congr. of the Intern. Soc. for Photogrammetry, Hamburg, 13-15 Jul. 1980 Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10212; NASA-CR-167507; SR-P1-04200; NAS 1.26:167507; LARS-071380) Avail: NTIS HC A02/MF A01 CSCL 02C

The state of knowledge of the multispectral reflectance characteristics of crops and soils as measured from laboratory, field, aerial, and satellite sensor systems is reviewed emphasizing current investigations. The relationships of important biological and physical characteristics to their spectral properties of crops and soils are addressed. Future research needs are defined. M.G.

DETERMINATION OF THE OPTIMAL LEVEL FOR COMBINING AREA AND YIELD ESTIMATES

M. E. BAUER, Principal Investigator, M. M. HIXSON, and C. D. JOBUSCH 12 Oct. 1981 71 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10215; NASA-CR-167511; FC-P1-04197; NAS 1.26:167511; LARS-101281) Avail: NTIS HC A04/MF A01 CSCL 02C

Several levels of obtaining both area and yield estimates are considered: county, refined strata, refined/split strata, crop reporting district, and state. Using the CCEA model form and smoothed weather data, regression coefficients at each level were derived to compute yield and its variance. The variance of the yield estimates was largest at the state and smallest at the county level for the two crops studied: corn and soybeans. The refined strata had somewhat larger variances than those associated with the refined/split strata and CRD. For production estimates, the difference in standard deviations among levels was not large for corn, but for soybeans the standard deviation at the state level was more than 50% greater than for the other levels. The refined strata had the smallest standard deviations. T.M.

APPLICATION OF THERMAL MODEL FOR PAN EVAPORATION TO THE HYDROLOGY OF A DEFINED MEDIUM, THE SPONGE
M. H. TRENCHARD and J. A. ARTLEY, Principal Investigators Nov. 1981 23 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10217; NASA-CR-167479; JSC-17440; NAS 1.26:167479; LEMSCO-16935; FC-L1-04192) Avail: NTIS HC A02/MF A01 CSCL 02C

A technique is presented which estimates pan evaporation from the commonly observed values of daily maximum and minimum air temperatures. These two variables are transformed to saturation vapor pressure equivalents which are used in a simple linear regression model. The model provides reasonably accurate estimates of pan evaporation rates over a large geographic area. The derived evaporation algorithm is combined with precipitation to obtain a simple moisture variable. A hypothetical medium with a capacity of 8 inches of water is initialized at 4 inches. The medium behaves like a sponge: it absorbs all incident precipitation, with runoff or drainage occurring only after it is saturated. Water is lost from this simple system through evaporation just as from a Class A pan, but at a rate proportional to its degree of saturation. The contents of the sponge is a moisture index calculated from only the maximum and minium temperatures and precipitation.

AIRBORNE OBSERVED SOLAR ELEVATION AND ROW DIRECTION EFFECTS ON THE NEAR-IR/RED RATIO OF COTTON
J. P. MILLARD, R. D. JACKSON (Science and Education Administration, Phoenix, Ariz.), R. C. GOETTELMAN (EAL Corp., Richmond, Calif.), and M. J. LEROY, Principal Investigators (DCA Corp., Palo Alto, Calif.) Aug. 1981 14 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract PROJ. AGRISTARS)
(E82-10220; NASA-TM-84204; JSC-17420; NAS 1.15:84204; EW-U1-04144) Avail: NTIS HC A02/MF A01 CSCL 02C

An airborne multispectral scanner was used to obtain data over two adjacent cotton fields having rows perpendicular to one another, at three times of day (different solar elevations), and on two dates (different plant size). The near IR/red ratios were displayed in image form, so that within-field variations and differences between fields could be easily assessed. The ratio varied with changing Sun elevation for north-south oriented rows, but no variation was detected for east-west oriented rows.

SELECTION OF THE AUSTRALIAN INDICATOR REGION
C. R. REED, Principal Investigator Sep. 1981 73 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10222; NASA-CR-167406; JSC-17421; NAS 1.26:167406; LEMSCO-15682; FC-L1-04145) Avail: NTIS HC A04/MF A01 CSCL 02C

Each Australian state was examined for the availability of LANDSAT data, area, yield, and production characteristics, statistics, crop calendars, and other ancillary data. Agrophysical conditions that could influence labeling and classification accuracies were identified in connection with the highest producing states as determined from available Australian crop statistics.

Based primarily on these production statistics, Western Australia and New South Wales were selected as the wheat indicator region for Australia. The general characteristics of wheat in the indicator region, with potential problems anticipated for proportion estimation are considered. The varieties of wheat, the diseases and pests common to New South Wales, and the wheat growing regions of both states are examined. A.R.H.

APPLICATION OF COMPUTER AXIAL TOMOGRAPHY (CAT) TO MEASURING CROP CANOPY GEOMETRY

M. E. BAUER, V. C. VANDERBILT, Principal Investigators, and R. W. KILGORE Jun. 1981 9 p refs Repr. from 1981 Intern. Geosci. and Remote Sensing Sym. (IGARSS'81), IEEE Catalog no. 81CH1656-8, 1981 p 1162-1167 Sym. held in Washington, D.C., 8-10 Jun. 1981 ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10227; NASA-CR-167397; NAS 1.26:167397; LARS-TR-060881; SR-P1-04141) Avail: NTIS HC A02/MF A01 CSCL 02C

The feasibility of using the principles of computer axial topography (CAT) to quantify the structure of crop canopies was investigated because six variables are needed to describe the position-orientation with time of a small piece of canopy foliage. Several cross sections were cut through the foliage of healthy, green corn and soybean canopies in the dent and full pod development stages, respectively. A photograph of each cross section representing the intersection of a plane with the foliage was enlarged and the air-foliage boundaries delineated by the plane were digitized. A computer program was written and used to reconstruct the cross section of the canopy. The approach used in applying optical computer axial tomography to measuring crop canopy geometry shows promise of being able to provide needed geometric information for input data to canopy reflectance models. The difficulty of using the CAT scanner to measure large canopies of crops like corn is discussed and a solution is proposed involving the measurement of plants one at a time. A.R.H.

LINEAR POLARIZATION OF LIGHT BY TWO WHEAT CANOPIES MEASURED AT MANY VIEW ANGLES

M. E. BAUER, Principal Investigator, V. C. VANDERBILT, L. L. BIEHL, B. F. ROBINSON, and A. S. VANDERBILT Sep. 1981 11 p refs Repr. from Intern. Colloq. on Spectral Signatures of Objects in Remote Sensing, 1980 Collog. held in Avignon, France, 8-11 Sep. 1980 Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10229; NASA-CR-167419; NAS 1.26:167419; LARS-TR-090981; SR-P1-04139) Avail: NTIS HC A02/MF A01 CSCL 20F

The linear polarization and reflection of visible light by wheat as a function of sun-view diections, crop development stage, and wavelength were examined. Two-hundred spectra were taken continuously in wave-lengths from 0.45 to 0.72 Micron in 33 view directions using an Exotech model 20C spectroradiometer six meters above two wheat canopies in the boot and fully headed maturity stages. The analysis results show that the amount of linearly polarized light from the wheat canopies is greatest in the blue spectral region and decreases gradually with increasing wavelength. The results also show that the linearly polarized light from the canopies is generally greatest in the azimuth direction of the Sun and tends toward zero as the view direction tends toward the direction of the hot spot or anti-solar point. It is demonstrated that the single, angle of incidence of sunlight on the leaf, explains almost all of the variation of the amount of polarized light with Sun-view direction. M.G.

N82-23603*# Lockheed Engineering and Management Services Co., Inc., Houston, Tex.

EVALUATION OF THE PROCEDURE FOR SEPARATING BARLEY FROM OTHER SPRING SMALL GRAINS

E. R. MAGNESS, Principal Investigator Aug. 1980 77 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10230; NASA-CR-160888; JSC-16752; NAS 1.26:160888; LEMSCO-14598; FC-LO-00472) Avail: NTIS HC A05/MF A01 CSCL 02C

The success of the Transition Year procedure to separate and label barley and the other small grains was assessed. It was decided that developers of the procedure would carry out the exercise in order to prevent compounding procedural problems with implementation problems. The evaluation proceeded by labeling the sping small grains first. The accuracy of this labeling was, on the average, somewhat better than that in the Transition Year operations. Other departures from the original procedure included a regionalization of the labeling process, the use of trend analysis, and the removal of time constraints from the actual processing. Segment selection, ground truth derivation, and data available for each segment in the analysis are discussed. Labeling accuracy is examined for North Dakota, South Dakota, Minnesota, and Montana as well as for the entire four-state area. Errors are characterized. A.R.H.

A MODEL OF PLANT CANOPY POLARIZATION

V. C. VANDERBILT Jun. 1980 12 p refs Repr. from Machine Process. of Remotely Sensed Data, Jun. 1980 p 98-108 Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10233; NASA-CR-167415; SR-P1-04170; NAS 1.26:167415; LARS-060580) Avail: NTIS HC A02/MF A01 CSCL 20F

A model for the amount of linearly polarized light reflected by the shiny leaves of grain crops is based on the morphological and phenological characteristics of the plant canopy and upon the Fresnel equations which describe the light reflection process at the smooth boundary separating two dielectrics. The theory used demonstrates that, potentially, measurements of the linearly polarized light from a crop canopy may be used as an additional feature to discriminate between crops such as wheat and barley, two crops which are so spectrally similar that they are misclassified with unacceptable frequency. Examination of the model suggests that, potentially, satellite polarization measurements may be used to monitor crop development stage, leaf water content, leaf area index, hail damage, and certain plant diseases. The information content of these measurements is needed to evaluate the proposed polarization sensor for the satellite-borne multispectral resource sampler. A.R.H.

USE AND APPLICABILITY OF THE VEGETATION COMPONENT OF THE NATIONAL SITE CLASSIFICATION SYSTEM

C. A. CLARK, Principal Investigator Apr. 1981 43 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10234; NASA-CR-167416; JSC-17122; NAS 1.26:167416; LEMSCO-15173; RR-LO-00466) Avail: NTIS HC A03/MF A01 CSCL 02C

Existing vegetation on a site in Sumter National Forest, South Carolina was classified using high altitude aerial optical bar color infrared photography in an effort to determine if the National Site Classification (NSC) system could be used in the heterogeneously forested southeastern United States where it had not previously been used. Results show that the revised UNESCO international classification and mapping of vegetation system, as incorporated into the NSCS, is general enough at the higher levels and specific enough at the lower levels to adequately accommodate densely forested, heterogeneous areas as well as the larger, more homogeneous regions of the Pacific Northwest. The major problem is of existing vegetation versus natural vegetation. A.R.H.

N82-23608*# Lockheed Engineering and Management Services Co., Inc., Houston, Tex.

DESCRIPTION OF THE FORTRAN IMPLEMENTATION OF THE SPRING SMALL GRAINS PLANTING DATE DISTRIBUTION MODEL

CANOPY REFLECTANCE AS INFLUENCED BY SOLAR ILLUMINATION ANGLE

M. E. BAUER, Principal Investigator, J. C. KOLLENKARK, V. C. VANDERBILT, and C. S. T. DAUGHTRY Mar. 1981 24 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10237; NASA-CR-167402; SR-P1-04039; NAS 1.26:167402; LRS-021681) Avail: NTIS HC A02/MF A01 CSCL 20F

The interaction of the solar illumination angle and row azimuth angle of the measured reflectance factor (RF) of soybean canopies was investigated. Diurnal changes of nearly 140% were observed in the red wavelength region when canopies covered 64% of the soil. The amount of shadow observed was a function of the plant geometry and row width. As soil cover approached 100%, the diurnal changes diminished. A function tht describes the solar illumination angle with respect to the row azimuth explained most of the diurnal variation in the measured RF. Variation in near infrared response was much less and did not appear to be as strongly related to Sun-row angle interactions. The near infrared/red ratio was highly sensitive to Sun angle-row direction interactions, whereas the greenness function, utilizing all four spectral bands, was not. J.D.

A MULTI-FREQUENCY RADIOMETRIC MEASUREMENT OF SOIL MOISTURE CONTENT OVER BARE AND VEGETATED FIELDS

J. R. WANG, T. J. SCHMUGGE, J. E. MCMURTREY, III (Dept. of Agriculture, Beltsville, Md.), W. I. GOULD, W. S. GLAZAR, and J. E. FUCHS, Principal Investigators Oct. 1981 16 p refs
Submitted for publication Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract PROJ. AGRISTARS)
(E82-10238; NASA-TM-83842; SM-GI-04178; NAS 1.15:83842)
Avail: NTIS HC A02/MF A01 CSCL 08M

A USDA Beltsville Agricultural Research Center site was used for an experiment in which soil moisture remote sensing over bare, grass, and alfalfa fields was conducted over a three-month period using 0.6 GHz, 1.4 GHz, and 10.6 GHz Dicke-type microwave radiometers mounted on mobile towers. Ground truth soil moisture content and ambient air and sil temperatures were obtained concurrently with the radiometric measurements. Biomass of the vegetation cover was sampled about once a week. Soil density for each of the three fields was measured several times during the course of the experiment. Results of the radiometric masurements confirm the frequency dependence of moisture sensing sensitivity reduction reported earlier. Observations over the bare, wet field show that the measured brightness temperature is lowest at 5.0 GHz and highest of 0.6 GHz frequency, a result contrary to expectation based on the estimated dielectric permittivity of soil water mixtures and current radiative transfer model in that frequency range. ANALYSIS OF SCANNER DATA FOR CROP INVENTORIES Progress Report, 15 Feb. - 30 Jun. 1981

R. HORVATH, Principal Investigator, R. C. CICONE, R. J. KAUTH, and W. A. MALILA Aug. 1981 273 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior and Agency for Intern. Develop. ERTS
(Contract NAS9-15476; PROJ. AGRISTARS)
(E82-10241; NASA-CR-167391; NAS 1.26:167391;
ERIM-152400-6-P) Avail: NTIS HC A12/MF A01 CSCL 02C

Progress and technical issues are reported in the development of corn/soybeans area estimation procedures for use on data from South America, with particular emphasis on Argentina. Aspects related to the supporting research section of the AgRISTARS Project discussed include: (1) multisegment corn/soybean estimation; (2) through the season separability of corn and soybeans within the U.S. corn belt; (3) TTS estimation; (4) insights derived from the baseline corn and soybean procedure; (5) small fields research; and (6) simulating the spectral appearance of wheat as a function of its growth and development. To assist the foreign commodity production forecasting, the performance of the baseline corn/soybean procedure was analyzed and the procedure modified. Fundamental limitations were found in the existing guidelines for discriminating these two crops. The temporal and spectral characteristics of corn and soybeans must be determined because other crops grow with them in Argentina. The state of software technology is assessed and the use of profile techniques for estimation is considered. A.R.H.

(E82-10245; NASA-CR-168826; NAS 1.26:168826) Avail: NTIS HC A04/MF A01 CSCL 04B

A ground and aircraft program was conducted to extend ground based methods for measuring soil moisture and crop water stress to aircraft and satellite altitudes. A 260ha agricultural field in California was used over the 1977-78 growing season. For cloud free days ground based temperature measurements over bare soil were related to soil moisture content. Water stress resulted from too much water, not from lack of it, as was expected. A theoretical examination of the canopy air temperature difference as affected by vapor pressure deficit and net radiation was developed. This analysis shows why surface temperatures delineate crop water stress under conditions of low humidity, but not under high humidity conditions. Multilevel temperatures acquired from the ground, low and high altitude aircraft, and the Heat Capacity Mapping Mission (HCMM) spacecraft were compared for two day and one night overpasses. The U-2 and low altitude temperatures were within 0.5 C. The HCMM data were analyzed using both the pre- and post-launch calibrations, with the former being considerably closer in agreement with the aircraft data than the latter. M.G.

AN ANALYSIS OF LANDSAT MSS SCENE-TO-SCENE REGISTRATION ACCURACY

B. R. SEYFARTH and P. W. COOK, Principal Investigators (USDA) Dec. 1981 14 p Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior, and Agency for International Development ERTS
(Contract PROJ. AGRISTARS)
(E82-10285; NASA-TM-84694; DC-Y1-04156; NSTL/ERL-198;
NAS 1.15:84694) Avail: NTIS HC A02/MF A01 CSCL 02C

Measurements were made for 12 registrations done by ERL for 8 registrations done by SRS. The results indicate that the ERL method is significantly more accurate in five of the eight comparison. The difference between the two methods are not significant in the other three cases. There are two possible reasons for the differences. First, the ERL model is a piecewise linear model and the EDITOR model is a cubic polynomial model. Second, the ERL program resamples using bilinear interpolation while the EDITOR software uses a nearest neighbor resampling. This study did not indicate how much of the difference is attributable to each factor. The average of all merged scene error values for ERL was 31.6 meters and the average for the eight common areas was 32.6 meters. The average of the eight merged scene error values for SRS was 40.1 meters. T.M.

AN ALGORITHM FOR AUTOMATING THE REGISTRATION OF USDA SEGMENT GROUND DATA TO LANDSAT MSS DATA

M. H. GRAHAM, Principal Investigator Dec. 1981 31 p refs
Sponsored by NASA, USDA, Dept. of Commerce, Dept. of Interior and Agency for International Development ERTS
(Contract PROJ. AGRISTARS)
(E82-10286; NASA-TM-84695; DC-YI-04211; NSTL/ERL-201;
NAS 1.15:84695) Avail: NTIS HC A03/MF A01 CSCL 02C

The algorithm is referred to as the Automatic Segment Matching Algorithm (ASMA). The ASMA uses control points or the annotation record of a P-format LANDSAT compter compatible tape as the initial registration to relate latitude and longitude to LANDSAT rows and columns. It searches a given area of LANDSAT data with a 2x2 sliding window and computes gradient values for bands 5 and 7 to match the segment boundaries. The gradient values are held in memory during the shifting (or matching) process. The reconstructed segment array, containing ones (1's) for boundaries and zeros elsewhere are computer compared to the LANDSAT array and the best match computed. Initial testing of the ASMA indicates that it has good potential for replacing the manual technique. T.M.

ANALYSIS OF THEMATIC MAPPER SIMULATOR DATA ACQUIRED DURING WINTER SEASON OVER PEARL RIVER, MISSISSIPPI, TEST SITE

J. E. ANDERSON and M. T. KALCIC, Principal Investigators Mar. 1982 45 p refs Sponsored by NASA, USDA, Dept. of Commerce Dept. of Interior and Agency for International Development Original contains color imagery. Original photography may be purchased from EROS Data Center, Sioux Falls, S.D. 57198 ERTS

(Contract PROJ. AGRISTARS)

(E82-10287; NASA-TM-84696, RR-Y1-04217; NSTL/ERL-202; NAS 1.15:84696) Avail: NTIS HC A03/MF A01 CSCL 05B

Digital processed aircraft-acquired thematic mapping simulator (TMS) data collected during the winter season over a forested site in southern Mississippi are presented to investigate the utility of TMS data for use in forest inventories and monitoring. Analyses indicated that TMS data are capable of delineating the mixed forest land cover type to an accuracy of 92.5 % correct. The accuracies associated with river bottom forest and pine forest were 95.5 and 91.5 % correct. The accuracies associated with river bottom forest and pine forest were 95.5 and 91.5 % correct, respectively. The figures reflect the performance for products produced using the best subset of channels for each forest cover type. It was found that the choice of channels (subsets) has a significant effect on the accuracy of classification produced, and that the same channels are not the most desirable for all three forest types studied. Both supervised and unsupervised spectral signature development techniques are evaluated; the unsupervised methods proved unacceptable for the three forest types considered. E.A.K.

DELINEATION OF SOIL TEMPERATURE REGIMES FROM HCMM DATA Quarterly Report

R. L. DAY and G. W. PETERSEN, Principal Investigators 31 Mar. 1982 3 p refs HCMM

(E82-10298; NASA-CR-168867; NAS 1.26:168867) Avail: NTIS HC A02/MF A01 CSCL 08M

The subsetting of HCMM data into ORSER format was completed for four dates using a modified SUBSET program. Large areas (approximately 2500 scan lines, 1680 elements) were selected to increase the occurrence of suitable control points for registration. Average daily temperatures (ADT) were calculated for each date. The MERGE program combined registered daytime temperature (DAY-IR) with nighttime temperature (NIGHT-IR) to form a separate two-channel data set. The SUBTRAN program averaged the DAY-IR and NIGHT-IR creating a third ADT channel. Registration equations for the four ADT data sets were generated. A one dimensional soil heat flow equation was modified to allow for mean annual soil temperature predictions using merged ADT data sets. A.R.H.

USE OF THERMAL INERTIA DETERMINED BY HCMM TO PREDICT NOCTURNAL COLD PRONE AREAS IN FLORIDA Quarterly Report, 16 Sep. - 15 Dec. 1981

L. H. ALLEN, JR., Principal Investigator, E. CHEN, J. D. MARTSOLF, and P. H. JONES 15 Dec. 1981 15 p refs HCMM

(Contract NAS5-26453)

(E82-10299; NASA-CR-168868; NAS 1.26:168868) Avail: NTIS HC A02/MF A01 CSCL 04B

Surface temperatures derived from HCMM data were compared with to those obtained by GOES satellite and the apparent thermal inertia (ATI) calculated. For two dates, the HCMM temperatures appear to be about 5 C lower than the GOES temperatures. The ATI for excessively-drained to well-drained mineral soils was greater than for drained organic soils possibly because of long periods of low rainfall during late 1980 and early 1981. Organic soils cropped to sugar cane showed lower ATI after a severe killing freeze. With dead leaves, there was less transpiration and more solar radiation probably reached the dark soil surface. This would explain the larger diurnal temperature amplitude observed. A.R.H.

THERMAL MAPPING, GEOTHERMAL SOURCE LOCATION, NATURAL EFFLUENTS AND PLANT STRESS IN THE MEDITERRANEAN COAST OF SPAIN Final Report, Sep. 1978 - Aug. 1980

R. N. DELASCUEVAS, Principal Investigator and A. M. DEARAGON 31 Mar. 1981 218 p Sponsored by NASA Original contains color imagery. Original imagery may be purchased from NASA Goddard Space Flight Center, (code 601), Greenbelt, Md. 20070. Domestic users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A for Rockets and Satellites'. HCMM

(E82-10300; NASA-CR-168869; NAS 1.26:168869) Avail: NTIS HC A10/MF A01 CSCL 08G

Data obtained by HCMM satellite over a complex area in eastern Spain were evaluated and found to be most useful in studying macrostructures in geology and in analyzing marine currents, layers, and areas (although other satellites provide more data). The upper scale to work with HCMM data appears to be 1:2.000.000. Techniques used in preprocessing, processing, and analyzing imagery are discussed as well as methods for pattern recognition. Surface temperatures obtained for soils, farmlands, forests, geological structures, and coastal waters are discussed. Suggestions are included for improvements needed to achieve better results in geographic areas similar to the study area. E.A.K.

A METHOD FOR INFERRING AVAILABLE SURFACE MOISTURE USING REMOTE SURFACE TEMPERATURE MEASUREMENTS: AN ASSESSMENT

T. N. CARLSON, Principal Investigator Feb. 1982 33 p refs Sponsored by NASA ERTS

(E82-10311; NASA-CR-168886; NAS 1.26:168886) Avail: NTIS HC A03/MF A01 CSCL 08M

A method for inferring surface moisture availability, which combines a numerical boundary layer model with remote estimates of surface-temperature, is evaluated with regard to its ability to provide significant results. Some analyses of surface moisture availability based on GOES and on HCMM surface temperature measurements are presented for an urban area (St. Louis) and for a drought situation over Kansas. Patterns of moisture availability clearly indicate a relationship between land use, particularly vegetation cover, and derived moisture availability over urban areas and also suggest a relationship between antecedent rainfall and derived moisture availability over vegetated regions. Soil moisture in the 0-cm to 4-cm layer could be estimated with 1-mm soil temperatures throughout the growing season of a rainfed barley crop in eastern South Dakota. Empirical equations were developed to reduce the effect of canopy cover when radiometrically estimating the soil temperature. Corrective equations were applied to an aircraft simulation of HCMM data for a diversity of crop types and land cover conditions to estimate the soil moisture. The average difference between observed and measured soil moisture was 1.6% of field capacity. Shallow alluvial aquifers were located with HCMM predawn data. After correcting the data for vegetation differences, equations were developed for predicting water table depths within the aquifer. A finite difference code simulating soil moisture and soil temperature shows that soils with different moisture profiles differed in soil temperatures in a well defined functional manner. A significant surface thermal anomaly was found to be associated with shallow water tables. A.R.H.

ORBITING PASSIVE MICROWAVE SENSOR SIMULATION APPLIED TO SOIL MOISTURE ESTIMATION Final Report

R. W. NEWTON, Principal Investigator, B. V. CLARK, W. M. PITCHFORD, and J. F. PARIS (Houston Univ., Clear Lake City) Dec. 1979 219 p Original contains imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 ERTS
(Contract NSG-5266)
(E82-10343; NASA-CR-168960; NAS 1.26:168960; RSC-3753) Avail: NTIS HC A10/MF A01 CSCL 08M

A sensor/scene simulation program was developed and used to determine the effects of scene heterogeneity, resolution, frequency, look angle, and surface and temperature relations on the performance of a spaceborne passive microwave system designed to estimate soil water information. The ground scene is based on classified LANDSAT images which provide realistic ground classes, as well as geometries. It was determined that the average sensitivity of antenna temperature to soil moisture improves as the antenna footprint size increased. Also, the precision (or variability) of the sensitivity changes as a function of resolution. M.G.

PLAN OF RESEARCH FOR INTEGRATED SOIL MOISTURE STUDIES. RECOMMENDATIONS OF THE SOIL MOISTURE WORKING GROUP

Oct. 1980 111 p refs
(NASA-TM-84731; NAS 1.15:84731) Avail: NTIS HC A06/MF A01 CSCL 08M

Soil moisture information is a potentially powerful tool for applications in agriculture, water resources, and climate. At present, it is difficult for users of this information to clearly define their needs in terms of accuracy, resolution and frequency because of the current sparsity of data. A plan is described for defining and conducting an integrated and coordinated research effort to develop and refine remote sensing techniques which will determine spatial and temporal variations of soil moisture and to utilize soil moisture information in support of agricultural, water resources, and climate applications. The soil moisture requirements of these three different application areas were reviewed in relation to each other so that one plan covering the three areas could be formulated. Four subgroups were established to write and compile the plan, namely models, ground-based studies, aircraft experiments, and spacecraft missions. A.R.H.

SPECTRAL ESTIMATES OF SOLAR RADIATION INTERCEPTED BY CORN CANOPIES

M. E. BAUER, Principal Investigator, C. S. T. DAUGHTRY, and K. P. GALLO Mar. 1982 17 p refs Sponsored by NASA, USDA, Dept. of Commerce, Dept. of the Interior, and Agency for International Development ERTS
(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10003; NASA-CR-167643; SR-P2-04236; NAS 1.26:169032; LARS-030182) Avail: NTIS HC A02/MF A01 CSCL 20F

Reflectance factor data were acquired with a Landsat band radiometer throughout two growing seasons for corn (Zea mays L.) canopies differing in planting dates, populations, and soil types. Agronomic data collected included leaf area index (LAI), biomass, development stage, and final grain yields. The spectral variable, greenness, was associated with 78 percent of the variation in LAI over all treatments. Single observations of LAI or greenness have limited value in predicting corn yields. The proportions of solar radiation intercepted (SRI) by these canopies were estimated using either measured LAI or greenness. Both SRI estimates, when accumulated over the growing season, accounted for approximately

65 percent of the variation in yields. Models which simulated the daily effects of weather and intercepted solar radiation on growth had the highest correlations to grain yields. This concept of estimating intercepted solar radiation using spectral data represents a viable approach for merging spectral and meteorological data for crop yield models. Author

Soil moisture data obtained using scatterometers, modular multispectral scanners and passive microwave radiometers were revised and grouped into four field cover types for statistical anaysis. Guymon data are grouped as alfalfa, bare, milo with rows perpendicular to the field view, and milo viewed parallel to the field of view. Dalhart data are grouped as bare combo, stubble, disked stubble, and corn field. Summary graphs combine selected analyses to compare the effects of field cover. The analysis for each of the cover types is presented in tables and graphs. Other tables show elementary statistics, correlation matrices, and single variable regressions. Selected eigenvectors and factor analyses are included and the highest correlating sensor typs for each location are summarized. E.A.K.

Image simulation techniques were employed to generate synthetic aperture radar images of a 17.7 km x 19.3 km test site located east of Lawrence, Kansas. The simulations were performed for a space SAR at an orbital altitude of 600 km, with the following sensor parameters: frequency = 4.75 GHz, polarization = HH, and angle of incidence range = 7 deg to 22 deg from nadir. Three sets of images were produced corresponding to three different spatial resolutions; 20 m x 20 m with 12 looks, 100 m x 100 m with 23 looks, and 1 km x 1 km with 1000 looks. Each set consisted of images for four different soil moisture distributions across the test site. Results indicate that, for the agricultural portion of the test site, the soil moisture in about 90% of the pixels can be predicted with an accuracy of = + or - 20% of field capacity. Among the three spatial resolutions, the 1 km x 1 km resolution gave the best results for most cases, however, for very dry soil conditions, the 100 m x 100 m resolution was slightly superior. Association is made between the development stages of corn as defined by Hanway and the temporal-spectral development pattern of corn in a transformed data space derived from Landsat-MSS band reflectance values, using field-collected reflectance and associated data. Results indicate that the spectral vegetation index used (a reflectance equivalent of Tasseled Cap Greenness) reaches a maximum well before the stage at which corn is expected to achieve its peak leaf area index. Possible physiological and canopy geometry related causes for this and other results are presented. Author

MAPPING OF WILDLIFE HABITAT IN FARMINGTON BAY, UTAH
R. A. JAYNES and R. D. WILLIE, Principal Investigators 1982 15 p refs ERTS
(Contract NAGW-95)
(E82-10354; NASA-CR-168975; NAS 1.26:168975; CRSC-82-1)
Avail: NTIS HC A02/MF A01 CSCL 08B

Mapping was accomplished through the interpretation of high-altitude color infrared photography. The feasibility of utilizing LANDSAT digital data to augment the analysis was explored; complex patterns of wildlife habitat and confusion of spectral classes resulted in the decision to make limited use of LANDSAT data in the analysis. The final product is a map which delineates wildlife habitat at a scale of 1:24,000. The map is registered to and printed on a screened U.S.G.S. quadrangle base map. Screened delineations of shoreline contours, mapped from a previous study, are also shown on the map. Intensive field checking of the map was accomplished for the Farmington Bay Waterfowl Management Area in August 1981; other areas on the map received only spot field checking. Author

DETECTION OF VARIATIONS IN ASPEN FOREST HABITAT FROM LANDSAT DIGITAL DATA: BEAR RIVER RANGE, UTAH
J. A. MEROLA and R. A. JAYNES, Principal Investigators 17 Mar. 1982 34 p refs Sponsored in part by US Forest Service ERTS
(Contract NAGW-95; NSF SPI-80-03978)
(E82-10355; NASA-CR-168976; NAS 1.26:168976; CRSC-82-2)
Avail: NTIS HC A03/MF A01 CSCL 02F

The aspen forests of the Bear River Range were analyzed and mapped using data recorded on July 2, 1979 by the LANDSAT III satellite; study efforts yielded sixty-seven light signatures for the study area, of which three groups were identified as aspen and mapped at a scale of 1:24,000. Analysis and verification of the three groups were accomplished by random location of twenty-six field study plots within the LANDSAT-defined aspen areas. All study plots are included within the Cache portion of the

Wasatch-Cache National Forest. The following selected site characteristics were recorded for each study plot: a list of understory species present; average percent cover density for understory species; aspen canopy cover estimates and stem measurements; and general site topographic characteristics. The study plot data were then analyzed with respect to corresponding Landsat spectral signatures. Field studies show that all twenty-six study plots are associated with one of the three aspen groups. Further study efforts concentration on characterizing the differences between the site characteristics of plots falling into each of the three aspen groups. Author

Avail: NTIS HC A03/MF A01 CSCL 02C

The irrigated cropland in the Bear River Basin as of the 1975 growing season was inventoried from satellite imagery. LANDSAT color infrared images (scale 1:125,000) were examined for early, mid, and late summer dates, and acreage was estimated by use of township/section overlays. The total basin acreage was estimated to be 573,435 acres, with individual state totals as follows: Idaho 234,370 acres; Utah 265,505 acres; and Wyoming 73,560 acres. As anticipated, wetland areas intermingled among cropland appears to have produced an over-estimation of irrigated acreage. According to a 2% random sample of test sites evaluated by personnel from the Soil Conservation Service such basin-wide over-estimation is 7.5%; individual counties deviate significantly from the basin-wide figure, depending on the relative amount of wetland areas intermingled with cropland. Two visible/near IR hand held radiometers and a hand held thermoradiometer were used along with soil moisture and lysimetric measurements in a study of soil moisture distribution in afalfa fields on the Navajo Indian Irrigation Project near Farmington, New Mexico. Radiances from irrigated plots were measured and converted to reflectances. Surface soil water contents (o cm to 4 cm) were determined gravimetrically on samples collected at the same time as the spectral measurements. The relationship between the spectral measurements and the crop coefficient were evaluated to demonstrate potential for using spectral measurement to estimate crop coefficient. E.A.K.

In an effort to investigate aircraft multisensor responses to soil moisture and vegetation in agricultural fields, an intensive ground sampling program was conducted in Guymon, Oklahoma and Dalhart, Texas in conjunction with aircraft data collected for visible/infrared and passive and active microwave systems. Field selections, sampling techniques, data processing, and the aircraft schedule are discussed for both sites. Field notes are included along with final (normalized and corrected) data sets. A.R.H.

MULTIFREQUENCY REMOTE SENSING OF SOIL MOISTURE Final Report

S. W. THEIS, M. J. MCFARLAND, W. D. ROSENTHAL, and C. L. JONES, Principal Investigator Feb. 1982 145 p refs ERTS
(Contract NSG-5134)
(E82-10362; NASA-CR-169011; NAS 1.26:169011; RSC-3458-129) Avail: NTIS HC A07/MF A01 CSCL 08M

Multifrequency sensor data collected at Guymon, Oklahoma and Dalhart, Texas using NASA's C-130 aircraft were used to determine which of the all-weather microwave sensors demonstrated the highest correlation to surface soil moisture over optimal bare soil conditions, and to develop and test techniques which use visible/infrared sensors to compensate for the vegetation effect in this sensor's response to soil moisture. The L-band passive microwave radiometer was found to be the most suitable single sensor system to estimate soil moisture over bare fields. In comparison to other active and passive microwave sensors the L-band radiometer (1) was influenced least by ranges in surface roughness; (2) demonstrated the most sensitivity to soil moisture differences in terms of the range of return from the full range of soil moisture; and (3) was less sensitive to errors in measurement in relation to the range of sensor response. L-band emissivity related more strongly to soil moisture when moisture was expressed as percent of field capacity. The perpendicular vegetation index as determined from the visible/infrared sensors was useful as a measure of the vegetation effect on the L-band radiometer response to soil moisture. A.R.H.

DEVELOPMENT OF VISIBLE/INFRARED/MICROWAVE AGRICULTURE CLASSIFICATION AND BIOMASS ESTIMATION ALGORITHMS Final Report

W. D. ROSENTHAL, M. J. MCFARLAND, S. W. THEIS, and C. L. JONES, Principal Investigtors Feb. 1982 221 p refs ERTS
(Contract NSG-5134)
(E82-10363; NASA-CR-169012) Avail: NTIS HC A10/MF A01 CSCL 02C

Agricultural crop classification models using two or more spectral regions (visible through microwave) are considered in an effort to estimate biomass at Guymon, Oklahona Dalhart, Texas. Both grounds truth and aerial data were used. Results indicate that inclusin of C, L, and P band active microwave data, from look angles greater than 35 deg from nadir, with visible and infrared data improve crop discrimination and biomass estimates compared to results using only visible and infrared data. The microwave frequencies were sensitive to different biomass levels. The K and C band were sensitive to differences at low biomass levels, while P band was sensitive to differences at high biomass levels. Two indices, one using only active microwave data and the other using data from the middle and near infrared bands, were well correlated to total biomass. It is implied that inclusion of active microwave sensors with visible and infrared sensors on future satellites could aid in crop discrimination and biomass estimation. E.A.K.

THE USE OF SOIL TEXTURE AND FIELD CAPACITY TO NORMALIZE MICROWAVE SOIL MOISTURE MEASUREMENTS: SOME PROBLEMS M.S. Thesis

R. D. LEES May 1982 72 p refs Sponsored by Texas A & M Univ.
Avail: NTIS HC A04/MF A01

Soil moisture normalizing techniques attempt to explain variations in soil-water content between soils in terms of soil texture based on the percent sand, silt and clay in the soil. A critical analysis of these techniques was made to examine their effectiveness in comparing soils of varying texture and soil moisture content in relation to their microwave (radar) backscatter. While the particle size distribution is recognized as a significant factor in the soil-water relationship, its influence is regulated by a number of other factors. Results indicate that 'normalization' by use of field capacity - derived from the percentages of sand, silt and clay - actually reduced the sensitivity of backscattering coefficient to soil-water content. The water holding capacity of soils is variably influenced by properties such as soil structure, clay mineral type, organic matter content, aeration, soil layering, and hysteresis and related water addition and extraction processes. DEPENDENCE OF EARTH SPECTRUM OF POSITRONS AND ANTIPROTONS ON PROPAGATION MODELS

S. A. STEPHENS (Tata Institute of Fundamental Research, Bombay, India) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 214-217. refs

A calculation of the equilibrium spectra of positrons and antiprotons for different models are presented. A total of five propagation models is considered, comprising a simple leak box, a modified leaky box, a nested leaky box, a simple closed galaxy, and a modified closed galaxy. The antiproton spectrum is noted to be dependent only on the propagation model and not on the solar modulation, which supports the use of an antiproton spectrometer in monitoring the degree of solar modulation. Kinetic energy fluxes are determined for the two components as predicted for each model, and observed antiproton fluxes are shown to rule out the modified and nested leaky box models. The modified closed galaxy model is found to accurately predict solar modulation from low energy data, and positron data at high energies is taken to quantify the mean gas density in a region of total confinement to be 0.05 atoms/cu cm. ON THE STELLAR ORIGIN OF LOW ENERGY COSMIC RAYS

S. BISWAS, N. DURGAPRASAD, and S. S. TRIVEDI (Tata Institute of Fundamental Research, Bombay, India) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 314-317. refs

The hypothesis is proposed that energetic ions of He, C, N, O, etc., in the low energy (1 to 50 MeV/amu) anomalous component of cosmic rays, originate from O-type stars which manifest very strong stellar winds with very high mass loss rates of about 3 x 10 to the -6th solar mass/yr. These have terminal velocities of 1200-4000 km/s which are typically several times their escape velocities. These velocities correspond to ion energies of 10 to 200 keV/amu. These ions of energy of about 100 keV/amu are in partly ionized states and are accelerated in the interstellar shock fronts to about 10 MeV/amu, thus accounting for the observed anomalous component of low-energy cosmic rays. REMARKS ON COSMIC RAY ORIGIN

V. L. GINZBURG (Akademiia Nauk SSSR, Fizicheskii Institut, Moscow, USSR) and V. S. PTUSKIN (Akademiia Nauk SSSR, Institut Zemnogo Magnetizma Ionosfery i Rasprostraneniia Radiovoln, Troitsk, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 336-339. refs

Various problems related to current work on the origins of cosmic rays are considered. The acceleration of cosmic ray particles at the spherical front of an interstellar shock wave is analyzed, and a value of 10 to the 12th eV is obtained for the upper limit to accelerated particle energies. Transport in the Galaxy by means of large-scale turbulent motions is shown to produce a cosmic ray diffusion coefficient that is too low, while acceleration due to scattering by isotropic magnetohydrodynamic turbulence is also small. A possible method for the estimation of the contribution of local sources to cosmic ray concentrations observed near the earth is also presented, and possible explanations are suggested for the recent gamma ray observations of lowered cosmic ray electron concentrations at a distance less than 2 kpc from the galactic center. A.L.W.

PULSAR MODELS AND COSMIC-RAY ACCELERATION

F. C. MICHEL and A. J. DESSLER (Rice University, Houston, TX) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 340-343. refs

It is argued that radio pulsars and X-ray pulsars differ mainly in the fact that the the latter are surrounded by an inward moving accretion disk while the former are surrounded by an outward moving fossil collapse disk presumably left over from the formation event. Cosmic rays of more-or-less 'solar' composition can be accelerated to energies of 10 to the 20th eV shortly after the formation event. (Author)

SOLAR GAMMA-RAY EXPERIMENT ON ASTRO-A SATELLITE

K. OKUDAIRA, Y. HIRASIMA, M. YOSHIMORI (Rikkyo University, Tokyo, Japan), and I. KONDO (Tokyo, University, Tanashi, Japan) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 11-14. refs

The instrumentation and performance parameters of the Japanese Astro-A satellite for measuring solar gamma ray lines and continua associated with solar flares are described. A gamma ray spectrometer which is a phoswich scintillator covers the gamma ray range from 0.24-6.48 MeV with a resolution of 10 percent at 662 keV. Techniques to discern gamma ray from particle events are discussed, along with the 128 channel pulse height analyzer with three regions for the pulse height spectrum. Low bit rates are recorded during quiet modes, and high speed rates are enacted during a solar flare. The spacecraft was launched in Feb. 1981 and is in-flight calibrated by reference to the atmospheric positron annihilation line at 0.51 MeV.

HIGH-ENERGY SOLAR PROTONS

N. N. VOLODICHEV and I. A. SAVENKO (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 45-48. refs

Evidence is presented for a second particle acceleration phase following the explosive phase of a solar flare. Cerenkov and scintillation counters were employed on the Prognoz satellite to detect the arrival of protons with energies greater than 100 MeV or 500 MeV, respectively. Delays of several minutes to several tens of minutes were observed for the arrival of protons from radiobursts in the cm range and X ray bursts during solar flare activity. A similar delay was recorded on the Proton-3 satellite during a burst event of Nov. 22, 1977, using the same measurement techniques. The existence of a second acceleration phase, when protons are accelerated to high energies and electrons up to relativistic energies, is noted to not contradict a model of the explosive phase of the flare as a process of disappearance and break of the current layer in the region of a highly dense plasma

TIME AND ENERGY DEPENDENCE OF HEAVY ION ABUNDANCES IN SOLAR FLARE ENERGETIC PARTICLE EVENTS

G. M. MASON, H. WEISS, G. GLOECKLER (Maryland, University, College Park, MD), and D. HOVESTADT (Max-Planck-Institut fuer Physik und Astrophysik, Garching, West Germany) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 124-127. refs (Contract NAS5-11063; NAS5-25735; NGR-21-002-316)

Data from a survey of solar flare events undertaken by the UMD/MPI ULET telescope on the IMP-8 satellite during the period 1973-1977 yields examples of time and energy dependence of the abundances and spectra of the He, C, O and Fe heavy ions. Time variations are found in the O/He, O/C and Fe/O ratios which appear to be inconsistent with models based entirely on rigidity-dependent propagation in the interplanetary medium. It is speculated that such other factors as the abundance differences at the flare site on the sun, or features of the acceleration and release mechanisms, may play an important role in the variations discussed.

HIGH RESOLUTION MEASUREMENTS OF SOLAR FLARE ISOTOPES

R. A. MEWALDT, J. D. SPALDING, E. C. STONE, and R. E. VOGT (California Institute of Technology, Pasadena, CA) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 131-134. refs (Contract NAS5-20721; NGR-05-002-160)

The individual isotopes of C, N and O are measured in the large solar particle event of August 1978. Limits are placed on mass dependent selection effects occurring in the solar flare by fitting a simple mass fractionation law to measurements of the C, N, O and Mg isotopes, to relate the SEP composition more directly to the composition of the sun. The individual isotopes are found to be consistent with solar system abundances, and the absence of any observable fractionation for C, O and Mg leads to the conclusion that solar neon is most likely neon-A with Ne-22/Ne-20 equals 0.12.

11-YEAR MODULATION AND SPECTRUM OF COSMIC RAYS IN THE INTERSTELLAR SPACE

A. G. ZUSMANOVICH (Akademiia Nauk Kazakhskoi SSR, Sektor Ionosfery, Alma-Ata, Kazakh SSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 183-186. refs

The 11-year modulation in cosmic ray intensity is examined with a view towards the study of cosmic ray spectra in interstellar space. The steady-state, homogeneous solution of the cosmic ray modulation equation is used to determine a value of 0.4 plus or minus 0.1 for the modulation coefficient and a value between 15 and 20 GV for the rigidity of the unmodulated spectrum. Cosmic ray spectra outside the modulation region are then calculated from the modulation coefficient and differential energy spectra measured near earth at solar activity minimum, taking into account cosmic ray energy changes during passage through interplanetary space. Results are shown to be in agreement with measurements of galactic gamma ray intensities.

DETECTION OF ENVIRONMENTAL DISTURBANCE USING COLOR AERIAL PHOTOGRAPHY AND THERMAL INFRARED IMAGERY

S. ARONOFF and G. A. ROSS (Calgary, University, Calgary, Alberta, Canada) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 587-591. Research supported by the Alberta Oil Sands Environmental Research Program. refs

Characteristics of a program for satellite remote sensing for long-period environmental monitoring are examined, noting that establishing early mapping surveys of areas of concern aids in detection of stressful environmental conditions. The process is described with an example from IR and color photography of a 30,000 sq km area in the Athabasca Oil Sands, with the photography carried out from aircraft and satellite. The IR data was gathered between 8-14 microns and the photographs were taken at a 1:11,000 scale. Water-related disturbances detected included turbidity which indicated the possible presence of oil, and higher thermal emission near a tailings pond which also suggested an oil source. The presence of surface aquatic vegetation is an indicator of nutrient imbalance in a pond near a sewage pond. Finally, dead trees were observed near improperly installed culverts along new roads.

DETECTING RESIDENTIAL LAND-USE DEVELOPMENT AT THE URBAN FRINGE

J. R. JENSEN (South Carolina, University, Columbia, SC) and D. L. TOLL (NASA, Goddard Space Flight Center, Greenbelt, MD) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 629-643. refs

Problems associated with the use of Landsat multispectral scanner (MSS) imagery for the detection of urban growth and land use patterns are discussed. The presence of vegetation, either original or added between scanning periods, has been found to dramatically effect the range of signatures in a given area. Different land use developmental stages have been successfully identified by means of 1:50,000 scale panchromatic aerial photography, a resolution only considered possible by spaceborne instrumentation with the advent of the Landsat D satellite. Textural information generated through the grey-tone spatial-dependency matrix for the Landsat band 5 data is compared for different years and a change detection algorithm is described. It is found that the addition of vegetation during development after the removal of natural vegetation resulted in error of omission in the single band data, which must therefore only be used in concert with other data sources.

AIRCRAFT MONITORING OF SURFACE CARBON DIOXIDE EXCHANGE

R. L. DESJARDINS, E. J. BRACH (Agriculture Canada, Ottawa, Canada), P. ALVO, and P. H. SCHUEPP (McGill University, Sainte Anne de Bellevue, Quebec, Canada) Science, vol. 216, May 14, 1982, p. 733-735. Research supported by Agriculture Canada and National Research Council. refs

Aircraft-mounted sensors were used to measure the exchange of carbon dioxide above a cornfield, a forest, and a lake under midday conditions. Mean absorption values of 3400, 1200, and 100 milligrams of carbon dioxide per square meter per hour, respectively, are consistent with reported ground-based observations of carbon dioxide flux. Such information, gathered by aircraft, could be used to provide a quantitative evaluation of source and sink distributions of carbon dioxide in the biosphere, to establish a correlation between satellite data and near-surface measurements, and to monitor crop performance. PROBLEMS OF THE INTERPRETATION OF AERIAL AND SATELLITE IMAGES OF INDUSTRIAL SMOKE [PROBLEMY INTERPRETACJI LOTNICZYCH I SATELITARNYCH ZDJEC DYMOW PRZEMYSLOWYCH]

T. Z. DWORAK (Instytut Meteorologii i Gospodarki Wodnej, Krakow, Poland) Przeglad Geofizyczny, vol. 25, no. 1, 1980, p. 33-38. In Polish. refs

Methods for the interpretation of aerial and satellite photographs of industrial smoke emissions are considered, with particular attention given to the difficulties of the qualitative interpretation of such images. Conditions that should be taken into account in an approximate solution of the radiative-transfer equations are examined. Recommendations on the practical solution of a specific satellite remote-sensing problem are presented. B.J.

A82-31295#

DETECTION OF VOLCANIC SMOKE AND ASH-FALL AREA AT VOLCANO ASO, FROM LANDSAT MSS DATA

Y. TANAKA (Meteorological Research Institute, Isukuba, Ibaraki, Japan), K. TSUCHIYA, and Y. YAMAURA (National Space Development Agency of Japan, Tokyo, Japan) Papers in Meteorology and Geophysics, vol. 32, Dec. 1981, p. 275-290. refs

Landsat imagery is employed to determine the extent of volcanic smoke and ashfall associated with the eruptions of the volcano ASO in 1979 and 1980, and a comparison is made with nearby meteorological data. Pictures from four bands 0.5-0.6, 0.6-0.7, 0.7-0.8, and 0.8-1.1 micron, are analyzed for information on volcanic smoke, polluted sea water, vegetation, clouds, and visibility over urban areas. The imagery comprises natural, false, and Ektachrome colors, taken from multispectral band scanners on Landsats 2 and 3. A qualitative analysis of volcanic smoke is developed, and a comparison of topographic data with the Landsat images showed that the Landsat pictures are useful and sufficiently accurate for detecting terrain changes due to the volcanic activity, including the forms of caldera. Assessment of the volcanic state, smoke, and ashfall were also possible using the Landsat imagery. M.S.K.

SYSTEM ALBEDO AS SENSED BY SATELLITES - ITS DEFINITION AND VARIABILITY

N. A. HUGHES (Liverpool, University, Liverpool, England) and A. HENDERSON-SELLERS (NASA, Goddard Institute for Space Studies, New York, NY; Liverpool, University, Liverpool, England) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 1-11. Natural Environment Research Council refs
(Contract NERC-GR3/3941)

System albedo, an important climatological and environmental parameter, is considered. Some of the problems and assumptions involved in evaluating albedo from satellite data are discussed. Clear-sky and cloud albedos over the United Kingdom and parts of northwest Europe are treated. Consideration is given to the spectral, temporal, and spatial variations and the effect of averaging. The implications of these results for those using and archiving albedo values and for future monitoring of system albedo are discussed. Normalization is of especial importance since this correction alters many albedo values. The pronounced difference in spectral albedo of the two visible channels reemphasizes the problem of attempting to calculate integrated albedo values from meteorological satellite data. The assumption of isotropic reflection is seen to be invalid, hindering the computation of accurate albedo values. C.R.

REMOTE SENSING OF TORNADIC STORMS FROM GEOSYNCHRONOUS SATELLITE INFRARED DIGITAL DATA

R. J. HUNG (Alabama, University, Huntsville, AL) and R. E. SMITH (NASA, Marshall Space Flight Center, Huntsville, AL) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 69-81. refs
(Contract NAS8-33726)

Two cases of GOES digital infrared data were analyzed during the three-hour period immediately prior to the tornado touchdown times. Clouds associated with tornadoes were compared to those without tornadoes using a combination of satellite infrared and rawinsonde data. On the basis of this limited data sample, it appears as if the altitude to which the overshooting cloud top penetrated above the tropopause is the factor which determines whether or not a tornado is formed. In these cases, the overshooting cloud top collapsed about 15 to 30 min before the tornado touchdown. (Author)

RESOURCE INVENTORY TECHNIQUES USED IN THE CALIFORNIA DESERT CONSERVATION AREA

R. G. MCLEOD (California Institute of Technology, Jet Propulsion Laboratory Image Processing Laboratory, Pasadena, CA) and H. B. JOHNSON (U.S. Department of Agriculture, Grassland Soil and Water Research Laboratory, Temple, TX) In: Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 2-16. refs
(Contract NAS7-100)

A variety of conventional and remotely sensed data for the 25 million acre California Desert Conservation Area (CDCA) have been integrated and analyzed to estimate range carrying capacity. Multispectral classification was performed on a digital mosaic of ten Landsat frames. Multispectral classes were correlated with low level aerial photography, quantified and aggregated by grazing allotment, land ownership, and slope. (Author)

A82-32711

SAMPLE DESIGN FOR ESTIMATING CHANGE IN LAND USE AND LAND COVER

G. H. ROSENFIELD (U.S. Geological Survey, Reston, VA) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 793-801. refs

The tasks of the field of applied statistics known as sample design are enumerated as: (1) sampling within a specified population; (2) consideration of sampling distribution; (3) determination of sample size; (4) determination of sample selection procedure; and (5) estimation of population means, totals, variances and confidence limits from the sample information. This methodology, which is used in the estimation of land use and land cover change, is sufficiently general to extend to the determination of change in any type of time-variant thematic mapping. An opportunity is presented for the determination of land use and land cover change in the state of Pennsylvania over a 20-year period. O.C.

A82-32899

IMPACTS OF REMOTE SENSING ON U.S. GEOGRAPHY

J. E. ESTES, D. S. SIMONETT (California, University, Santa Barbara, CA), and J. R. JENSEN (Georgia, University, Athens, GA) Remote Sensing of Environment, vol. 10, Aug. 1980, p. 43-80. refs

Attention is called to the fact that few senior academic geographers are doing research in remote sensing and that few economic geographers have even considered the possibilities opened up by this technique. This dearth of research is even more pronounced among regional geographers with interests in less-developed countries. Programs of study in remote sensing are considered vital because remote sensing can provide the geographer with significant improvements in the quantity, quality, and timeliness of data. C.R.

A82-32901

EFFECT OF ATMOSPHERIC CONDITIONS ON REMOTE SENSING OF VEGETATION PARAMETERS

J. V. DAVE (IBM Scientific Center, Palo Alto, CA) Remote Sensing of Environment, vol. 10, Sept. 1980, p. 87-99. refs

The effects of atmospheric and observational conditions on the remote sensing of vegetation parameters are studied in simulations of the ratios of radiances in the 0.76-0.90 micron and 0.52-0.60 micron bands (Landsat Thematic Mapper bands 4 and 2, respectively) as a function of leaf water content in blue grama grass. The simulations were performed based on spectral flux reflectance and canopy data for 35 plots with different leaf water levels and three different models of the cloud-free midlatitude summer atmosphere with no, moderate and high aerosol contents at solar zenith angles from 0 to 80 deg, heights from the top to the bottom of the atmosphere, nadir angles from 0 to 75 deg and azimuth angles from 0 to 180 deg. Selected results demonstrate that the slope and intercept of the straight line expressing the dependence of radiance ratio on leaf water content can be significantly affected by atmospheric conditions and viewing geometry. SOUFRIERE VOLCANO, ST. VINCENT - OBSERVATIONS OF ITS 1979 ERUPTION FROM THE GROUND, AIRCRAFT, AND SATELLITES

R. S. FISKE (Smithsonian Institution, Washington, DC) and H. SIGURDSSON (Rhode Island, University, Kingston, RI) Science, vol. 216, June 4, 1982, p. 1105, 1106. refs

The 1979 eruption of Soufriere Volcano, St. Vincent, is described. The initial vulcanian explosive phase from April 13 to 26 was a series of discrete vertical explosions, blasting a new vent through the 1971-1972 lava island in the middle of the 1-km-wide crater lake. The second phase was characterized by the quiet extrusion of viscous basaltic andesite lava, resulting in the growth of a dome over the vent. The importance of the geologic, seismic and ground-deformation data gathered prior to the eruption is discussed. D.L.G.

SKIRT CLOUDS ASSOCIATED WITH THE SOUFRIERE ERUPTION OF 17 APRIL 1979

S. BARR (Los Alamos National Laboratory, Los Alamos, NM) Science, vol. 216, June 4, 1982, p. 1111, 1112.

A fortuitous and dramatic photograph of the Soufriere eruption column of April 17, 1979 displays a series of highly structured skirt clouds. The gentle distortion of thin, quasi-horizontal layers of moist air has been documented in meteorological situations. It is proposed that at St. Vincent subhorizontal layers of moist air were intensely deformed by the rapidly rising eruption column and were carried to higher altitudes, where they condensed to form the skirt clouds. AIRBORNE LIDAR MEASUREMENTS OF THE SOUFRIERE ERUPTION OF 17 APRIL 1979

W. H. FULLER, JR., S. SOKOL (NASA, Langley Research Center, Hampton, VA), and W. H. HUNT (Wyle Laboratories, Hampton, VA) Science, vol. 216, June 4, 1982, p. 1113-1115. refs

At the time of the Soufriere, St. Vincent, volcanic eruption of April 17, 1979, a NASA P-3 aircraft with an uplooking lidar (light detection and ranging) system onboard was airborne 130 kilometers east of the island. Lidar measurements of the fresh volcanic ash were made approximately 2 hours after the eruption, 120 kilometers to the northeast and east. On the evening of April 18, the airborne lidar, on a southerly flight track, detected significant amounts of stratospheric material in layers at 16, 17, 18, and 19.5 kilometers. These data, and measurements to the north on April 19, indicate that the volcanic plume penetrated the stratosphere to an altitude of about 20 kilometers and moved south during the first 48 hours after the eruption. FINE PARTICLES IN THE SOUFRIERE ERUPTION PLUME

D. C. WOODS (NASA, Langley Research Center, Hampton, VA) and R. L. CHUAN (Brunswick Corp., Costa Mesa, CA) Science, vol. 216, June 4, 1982, p. 1118, 1119. refs

The size distributions of fine particles measured at tropospheric altitudes in the periphery of the eruption plume formed during the April 17, 1979 eruption of Soufriere Volcano and in the low-level effluents on May 15, 1979 were found to be bimodal, having peak concentrations at geometric mean diameters of 1.1 and 0.23 micrometers. Scanning electron microscopy and energy-dispersive

X-ray analysis of the samples revealed an abundance of aluminum and silicon and traces of sodium, magnesium, chlorine, potassium, calcium, and iron in the large-particle mode. The submicrometer-sized particles were covered with liquid containing sulfur, assumed to be in the form of liquid sulfuric acid. (Author)

EPA'S NEW BUBBLE AND BANKING POLICIES
M. R. DELAND (U.S. Environmental Protection Agency, Environmental Monitoring Systems Laboratory, Las Vegas, NV) Environmental Science and Technology, vol. 16, June 1982, p. 338A-346A. refs

The uses of multispectral scanning (MSS), laser technology, and aerial photography in remote sensing programs to monitor potential and existing environmental problems are examined. Airborne MSS applications involve the detection of visible and IR emissions from the earth's surface for electronic cleaning of the imagery and reproduction of the sensed scene. Spectroscopic coding of the images allows identification of pollutants, the health of vegetative cover, and the state of observable water quality. Airborne laser sensing of chlorophyll-a in water bodies has allowed association of dissolved organic nutrients, due mainly to sewage discharges, with increases in the population of the algae. Lidar measurements permit digitized air quality measurements from aircraft. The development of a differential absorption lidar (DIAL) system, using two lasers close in frequency output, is paving the way for specific species labeling. M.S.K.

THE USE OF LANDSAT-3 THERMAL DATA TO HELP DIFFERENTIATE LAND COVERS
J. P. ORMSBY (NASA, Goddard Space Flight Center, Earth Survey Applications Div., Greenbelt, MD) Remote Sensing of Environment, vol. 12, May 1982, p. 97-105. refs

Landsat-3 Multispectral Scanner Subsystem (MSS) digital data of the Baltimore, Maryland area gathered on May 24, 1978, are examined to show the usefulness of thermal data in providing better discrimination between agricultural and residential areas, certain types of urban/industrial areas and water, cloud shadows and water, and bare-extractive areas and bright urban cover types. High altitude aircraft imagery taken on May 3, 1978, provides ground truth and training site verification. Two classifications are made for each training site: the initial one using bands 4, 5, and 7 and a second in which the thermal data are included with the visible and near infrared data. This permits a direct comparison of areas spectrally similar with and without the inclusion of the thermal data. Commission errors determined from selected subsets of the data show reductions of 95% for the urban/industrial versus water themes, 84% for the residential versus agriculture themes, 64.0% for the bare-extractive versus bright urban themes, and 24% for the cloud shadow versus water themes when the thermal data are included in the signature. SITE SELECTION AND ENGINEERING ISSUES FOR A MAJOR INDUSTRIAL COMPLEX - APPLICATION OF IMAGE AND MAP INTERPRETATION
D. S. WAY (Harvard University, Cambridge, MA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 164-169.

A major port and industrial complex is being developed in Indonesia near Singapore. Little existing data is available facilitating application of remote sensing techniques for site evaluation and planning. Over eight hundred square kilometers of area was analyzed. Landsat images, aerial photographs, and topographic maps where interpreted for geology, geomorphology, soils, hydrology, and visual resources. Evaluations were made for both environmental and development/engineering issues culminating in a phased master plan. The data contributed by remote sensing represented a significant savings in site reconnaissance, design and construction. (Author)

A NEW APPROACH TO MULTIRESOURCE INVENTORIES USING REMOTE SENSING AND GEOGRAPHIC INFORMATION SYSTEMS TECHNOLOGIES
J. VAN ROESSEL, P. G. LANGLEY, C. SHEFFIELD, and M. C. PLACE (Earth Satellite Corp., Berkeley, CA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 499-510. refs

The design for a new multiresource inventory system is presented. Two geographic information systems are employed in concert to support a sampling system which can provide estimates for multiple resource parameters. One GIS (the upper level) is cell- and tape- oriented and incorporates various types of Landsat processing. The other (the lower level) is a disk-based polygon system that holds high resolution sample maps. The two systems are connected through a linear regression model. The results of a pilot test of a prototype system in South Carolina are presented. (Author)

IMPROVED LAND USE CLASSIFICATION FROM LANDSAT AND SEASAT SATELLITE IMAGERY REGISTERED TO A COMMON MAP BASE
J. CLARK (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 591-599. refs
(Contract NAS7-100)

In the case of Landsat Multispectral Scanner System (MSS) data, ambiguities in spectral signature can arise in urban areas. A study was initiated in the belief that Seasat digital SAR could help provide the spectral separability needed for a more accurate urban land use classification. A description is presented of the results of land use classifications performed on Landsat and preprocessed Seasat imagery that were registered to a common map base. The process of registering imagery and training site boundary coordinates to a common map has been reported by Clark (1980). It is found that preprocessed Seasat imagery provides signatures for urban land uses which are spectrally separable from Landsat signatures. This development appears to significantly improve land use classifications in an urban setting for class 12 (Commercial and Services), class 13 (Industrial), and class 14 (Transportation, Communications, and Utilities). LONGWAVE INFRARED OBSERVATION OF URBAN LANDSCAPES
S. N. GOWARD (NASA, Goddard Institute for Space Studies; Columbia University, New York, NY) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 600-609. Research supported by the Indiana Academy of Science and Indiana State University. refs

An investigation is conducted regarding the feasibility to develop improved methods for the identification and analysis of urban landscapes on the basis of a utilization of longwave infrared observations. Attention is given to landscape thermal behavior, urban thermal properties, modeled thermal behavior of pavements and buildings, and observed urban landscape thermal emissions. The differential thermal behavior of buildings, pavements, and natural areas within urban landscapes is found to suggest that integrated multispectral solar radiant reflectance and terrestrial radiant emissions data will significantly increase potentials for analyzing urban landscapes. In particular, daytime satellite observations of the considered type should permit better identification of urban areas and an analysis of the density of buildings and pavements within urban areas. This capability should enhance the utility of satellite remote sensor data in urban applications. G.R.

OBSERVED MAGNETIC SUBSTORM SIGNATURES AT SYNCHRONOUS ALTITUDE
T. NAGAI Journal of Geophysical Research, vol. 87, June 1, 1982, p. 4405-4417. refs

Magnetic field data from the geostationary satellites GOES 2 and GOES 3 are examined to study the development of substorm activity in the near-earth nightside magnetosphere (around a radial distance of 6.6 earth radii). Substorm events are those in which a well-defined single onset is seen at low latitudes on the ground. The field configuration change from more taillike to more dipolelike starts initially in a longitudinally localized region in association with the ground onset, and it develops westward and eastward, even when the simultaneous onset of the low-latitude positive bay is recorded in a wide longitudinal region on the ground. It is also found that the variation caused by the field-aligned current starts at the ground onset and reaches a peak at the time of the field change. The present results are consistent with the view that a substorm is associated with a disruption and subsequent conversion of the cross-tail current to the field-aligned current connected with the polar ionosphere. It is indicated that the cross-tail current near synchronous orbit and its disruption are important in producing the field configuration change at synchronous orbit. (Author)

GENERATION OF THE AURORAL KILOMETRIC RADIATION
C. S. WU, H. K. WONG (Maryland, University, College Park, MD), D. J. GORNEY (Aerospace Corp., Space Sciences Laboratory, El Segundo, CA), and L. C. LEE (Alaska, University, Fairbanks, AK) Journal of Geophysical Research, vol. 87, June 1, 1982, p. 4476-4487. refs
(Contract F04701-80-C-0081; NSF ATM-81-16045; NGL-21-002-005)

Data collected from the S3-3 spacecraft in the auroral kilometric radiation (AKR) source region are employed to form a stability theory from which numerical results are obtained and discussed. The distribution function was found to be isotropic outside the auroral atmospheric loss-cone region, which was partially filled with upcoming electrons. A parallel electric field was observed to be modifying the loss-cone distribution. A model distribution function is formulated, along with a magnetic field model expressed in terms of the electron cyclotron frequency. Models for the parallel electric field are also introduced, the first with the field distributed over a broad altitude range, while the second assumes a potential drop only above 4000 km. The presence of the field is found to enhance the growth rate of the AKR. At higher altitudes, the cutoff frequency of the X mode is affected by the rising energetic electrons. Finally, the folding distances of spatial amplification are calculated. M.S.K.

OBSERVATION OF THE DIURNAL VARIATION OF ATMOSPHERIC OZONE
J. L. LEAN (Adelaide, University, Adelaide, Australia) Journal of Geophysical Research, vol. 87, June 20, 1982, p. 4973-4980. Research supported by the World Meteorological Organization. refs

Ozone densities in the stratosphere and mesosphere have been derived from broad-band photometer measurements of Hartley band absorption of middle ultraviolet radiation. Seven rockets were launched during October-November 1979 from Wallops Island. Six rockets, each carrying one detector comprising two UV photometers, were launched at different times of the day. A seventh rocket, with three similar detectors each having three UV photometers, was launched at the time of a full moon and provided estimates of the nighttime ozone densities. Results from these rocket flights form a basis for investigating ozone diurnal variations. The number of flights provide greater statistical reliability for the ozone profiles than is generally afforded from in situ measurements with a single rocket. During the night, an enhancement in ozone densities occurred at altitudes above about 50 km. At 70 km, for example, the nighttime ozone was determined to be a factor of 6.4 greater than at sunset. In addition, these experiments suggest that near 40 km the magnitude of the ozone density at noon may be greater by 10-15% than the nighttime concentration. (Author)

TOTAL OZONE VARIATIONS 1970-74 USING BACKSCATTERED ULTRAVIOLET /BUV/ AND GROUND-BASED OBSERVATIONS
A. J. MILLER, R. M. NAGATANI, T. G. ROGERS (NOAA, National Meteorological Center, Washington, DC), A. J. FLEIG, and D. F. HEATH (NASA, Goddard Space Flight Center, Greenbelt, MD) Journal of Applied Meteorology, vol. 21, May 1982, p. 621-630. NASA-supported research. refs

The most long-lived satellite set of ozone observations, to date, is that derived from the Backscatter Ultraviolet (BUV) ozone sensor on Nimbus 4 and extends from April 1970 through 1976. Unfortunately, this experiment suffered spacecraft power limitations which limited the spatial and temporal coverage and also appears to have suffered from long-term drifts which may be associated with changes in the instrument characteristics or the incident solar flux. Techniques have been developed to account for these problems, and this paper presents results of the BUV total ozone variations and compares them with those from ground-based observations, specifically the computations of Angell and Korshover (1978). After adjustments for the spatial gaps and comparison with concurrent Dobson ground-based observations, no significant trend was found in the BUV data over the years 1970-74. This finding is in contrast to a general decrease of about 2% during the same period appearing in the data of Angell and Korshover. The difference in these results is discussed in terms of the geographic sampling and the methods of hemispheric integration. (Author)

AIRCRAFT MEASUREMENTS OF NO/X/ IN THE LOWER TROPOSPHERE ABOVE THE COAST OF JAPAN
Y. KONDO, M. TAKAGI, Y. MORITA, and A. IWATA Nagoya University, Research Institute of Atmospherics, Proceedings, vol. 29, Mar. 1982, p. 85-91. Research supported by the Nissan Science Foundation. refs

Concentrations of NO(x) in altitude regions of 0.5-3.0 km above the coastal area of Japan were measured. The measured mixing ratios range from 1 to 30 ppb depending on the altitude, location and time of the observations. From the measured mixing ratio, it can be said that relatively large amounts of NO(x) emitted at ground level are often transported at least as far as 3 km vertically and 200 km horizontally. (Author)

CHARACTERISTICS OF FIELD-ALIGNED E-REGION IRREGULARITIES OVER IIOKA /36 N/, JAPAN. I
T. TANAKA and S. V. VENKATESWARAN (California, University, Los Angeles, CA) Journal of Atmospheric and Terrestrial Physics, vol. 44, May 1982, p. 381-393, 395-397, 399-406. refs
(Contract NSF ATM-77-24843)

Measurements with a 25-MHz radar over Iioka, Japan, reveal that field-aligned E-region irregularities occur mainly at night in association with sporadic E (Es) layers at an altitude range of about 100-110 km and that they drift predominantly westward with speeds of the order of 60 m/s. It is shown that these observed characteristics of the irregularities are in reasonable agreement with quantitative predictions of the gradient drift instability theory. The predictions are based on appropriate models for neutral air densities and temperatures, ionic composition and ionospheric electric field, and available observations of electron density profiles of the E and Es layers. Observations of multifrequency (4-64 MHz) echoes with an oblique incidence ionosonde and of Doppler spectra with a fixed frequency (25 MHz) radar are then presented and discussed. It is shown that the ionosonde observations are capable of being explained in terms of the linear theory of cross-field or gradient-drift instability, which is presumed to generate the field-aligned irregularities. TROPOSPHERIC CO MEASUREMENT EXPERIMENT FROM THE SECOND SPACE SHUTTLE FLIGHT

H. G. REICHLE, JR. (NASA, Langley Research Center, Hampton, VA) American Meteorological Society, American Geophysical Union, and NASA, Symposium on the Composition of the Nonurban Troposphere, 2nd, Williamsburg, VA, May 25-28, 1982, Paper. 4 p. refs

The MAPS experiment was designed to remotely measure the mixing ratio of carbon monoxide in the middle and upper troposphere using a gas filter radiometer as the sensing instrument. The asymmetrical worldwide distribution of CO is discussed as background, and the experimental scientific and technical objectives are briefly stated. The gas filter radiometer is described in detail, and the second Shuttle mission is summarized. Auxiliary and correlative data were obtained in order to evaluate the performance of the measurement system, to assess the effect of stratospheric ozone on the radiometer signals, and to determine the effect of the underlying surface. The experiment acquired about 32 hours of data between 38 deg N and 38 deg S, signal-to-noise ratios were as predicted and the instrument achieved satisfactory stability in spite of large temperature variations. Data reduction is in progress. C.D.

AMMONIA AND THE NOX BUDGET OF THE TROPOSPHERE

J. S. LEVINE, T. R. AUGUSTSSON, and J. M. HOELL (NASA, Langley Research Center, Hampton, VA) American Meteorological Society, American Geophysical Union, and NASA, Symposium on the Composition of the Nonurban Troposphere, 2nd, Williamsburg, VA, May 25-28, 1982, Paper. 3 p. refs

Liu et al. (1980) suggested that NOx transported from the stratosphere, as opposed to the anthropogenic source of NOx, may be the dominant source that controls the distribution of NOx in the global troposphere. These ideas require a reinvestigation, and, in particular, an assessment of the role of the oxidation of ammonia as a source of NOx. Attention is given to the results of an ammonia measurement program, in which the vertical distribution of ammonia in the troposphere and lower stratosphere could be studied with the aid of the Infrared Heterodyne Radiometer (IHR), a solar-viewing remote sensor. A one-dimensional photochemical model of the troposphere reported by Levine et al. (1980) was employed to study the chemical and physical processes that control the loss of ammonia in the troposphere. The results of the considered investigation suggest that the oxidation of ammonia may indeed be a significant source of NOx in the troposphere. G.R.

ATMOSPHERIC OZONE DETERMINATION BY SOLAR OCCULTATION USING THE UV SPECTROMETER ON THE SOLAR MAXIMUM MISSION

A. C. AIKIN, B. WOODGATE (NASA, Goddard Space Flight Center, Greenbelt, MD), and H. J. P. SMITH (Visidyne, Inc., Burlington, MA) Applied Optics, vol. 21, July 1, 1982, p. 2421-2424. refs

The UV spectrometer polarimeter instrument on the Solar Maximum Mission spacecraft has been used to measure ozone in the 53-75 km altitude interval by the technique of solar occultation. A 1 x 180 arcsec entrance aperture spectrometer with 0.04-A spectral resolution was employed. Resulting high-quality data are reduced by expressing measured UV attenuation as a Volterra integral equation. Solution of the equation is accomplished by expressing the integral in terms of a series representing the sum of ozone densities contained in concentric shells through tangent points separated by specified altitude increments. Sample ozone vs altitude profiles are presented for the equatorial region. These data show reproducibility to better than 10%. The density at 60 km is 7.3 + or - 0.15 x 10 to the 9th/cu cm for 2.5 deg latitude and longitudes between 81 and 105 deg west in September 1980. Density vs altitude profile exhibits changes in slope between 50 and 75 km. (Author)

SENSITIVITY OF DOBSON TOTAL OZONE ESTIMATIONS TO WAVELENGTH BAND CALIBRATION UNCERTAINTIES

R. E. BASHER (New Zealand Meteorological Service, Wellington, New Zealand) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 33-36. refs

It is pointed out that calibration uncertainties in the center wavelength, bandwidth, and shape of the Dobson instrument's bands propagate uncertainty into extraterrestrial constants, ozone absorption coefficients, standard lamp calibrations, and total ozone estimations. Detailed calculations of these uncertainties have been conducted for a wide range of conditions of calibration and operation. It is emphasized that all of the considered calculations refer to the defined 'well calibrated', 'well operated' instrument. It is found that the percent standard errors in total ozone are very dependent on airmass and ozone amount. The errors are greatest at low airmass and low ozone, especially for the D and CD band combinations. The AD combination generally has the least error of the double wavelength pairs, and for the directly intercompared instruments has a standard error of 1.1% or less. G.R.

THE EFFECT OF THE SPECTRAL ATTENUATION OF UV RADIATION BY AEROSOL ON THE TOTAL OZONE MEASUREMENTS

A. DZIEWULSKA-LOSIOWA (Polska Akademia Nauk, Instytut Geofizyki, Warsaw, Poland) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 38-45. U.S. Environmental Protection Agency refs

(Contract EPA-5-536-4)

The effect of aerosol in the atmosphere on ozone measurements is considered. Shah (1976) had concluded that changes in aerosol concentration and particle size distribution affect the measurement results only slightly. DeLuisi (1975), on the other hand, had found that substantial differences exist between values for ozone content obtained by taking into account scattering, and values calculated without regard to scattering effects. Instrumental errors are analyzed and the statistical relationship between measurements at different wavelengths are investigated. It is found that differences between the results of measurements related to different wavelength pairs are greater than instrumental errors. It is shown that these results are connected with the spectral extinction of the atmospheric aerosol. G.R.

APPLICATION OF INFRARED TECHNIQUES TO THE STUDY OF ATMOSPHERIC OZONE [APPLICATION DES TECHNIQUES INFRAROUGES A L'ETUDE DE L'OZONE ATMOSPHERIQUE]

C. SECROUN, A. BARBE, P. MARCHE, and P. JOUVE (Reims, Universite, Reims, France) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 108-113. In French. refs

The present investigation is concerned with the utilization of the infrared wavelength region for the study of the ozone in the atmosphere, taking into account three atmospheric windows including the wavelength ranges near 10, 5, and 3 micrometers. More than 3200 spectral lines could be assigned to different bands of the ozone spectrum. Laboratory studies formed one part of the investigation. Spectral frequencies, absorption line intensities, and linewidths were determined for ozone. Some of the obtained results were employed in connection with data provided by the radiometric probe LIMS on board the Nimbus-7 satellite. The second part of the investigation involved a study of the atmosphere. The same spectrometer as in the laboratory study was utilized, and the sun was employed as radiation source. The obtained results were compared with data provided by a Dobson spectrophotometer. Attention is also given to vertical concentration profiles. It is concluded that infrared absorption spectroscopy represents a suitable technique for studies of atmospheric ozone. G.R.

A82-36415*# Jet Propulsion Lab., California Inst. of Tech., Pasadena.

MICROWAVE MEASUREMENT OF STRATOSPHERIC AND MESOSPHERIC OZONE

J. W. WATERS (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 114-121. refs

It is pointed out that ozone has a rich rotational spectrum with many lines at millimeter wavelengths. Measurement of these lines can provide a means of remotely sensing stratospheric and mesospheric ozone. Technology has recently advanced to the state where it is reasonable to consider monitoring upper atmospheric O3 on a global scale by microwave radiometers in earth orbit. An investigation indicates that approximately 1% accuracy and approximately 2 km vertical resolution O3 mixing ratio measurements are reasonable goals for limb-viewing microwave radiometers in earth orbit. Mesospheric ozone can also be measured by the considered techniques using stronger (but more temperature-sensitive) O3 lines. A balloon-borne microwave limb sounder has recently been constructed to test the practical limitations on the measurement concepts. Also under study is a microwave limb sounder for operation in earth orbit. G.R.

TOTAL OZONE RETRIEVAL FROM SATELLITE METEOR 28 FOURIER SPECTROMETER MEASUREMENTS

U. FEISTER and D. SPAENKUCH (Meteorologisches Hauptobservatorium, Potsdam, East Germany) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 168-175. refs

The efficiency and accuracy of four different algorithms for deriving total ozone from IR radiance measurements made with Fourier spectrometers are assessed. For a total of more than 1,100 spectrometer-interferometer spectra measured between July and September 1977, 40 corresponding Dobson ozone values are found with a maximum spatial distance between the subsatellite point and the Dobson station of 300 km and an average distance of 175 km; 35 values here are from midlatitudes of the Northern Hemisphere. The Dobson ozone values are used in determining a different number of coefficients for each method applying the least square method. With these coefficients, ozone values are calculated. The original number of spectral channels is then reduced to two intervals. It is found that a radiometer with one or two channels in the 9.6/micron band in the window and in the 15/micron band is sufficient for the total ozone determination. A highly significant positive correlation is found between spectrometer-interferometer ozone and calculated relative topographies of the lower stratosphere. This correlation holds even if the latitudinal dependence and autocorrelation of ozone values and relative topographies are eliminated. C.R.

A82-36428#

OPTICAL STOP AND FOCUSSING EFFECTS IN THE DOBSON INSTRUMENT

R. E. BASHER (New Zealand Meteorological Service, Wellington, New Zealand) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 216-218.

The present investigation shows that the 'directional effect' observed in connection with the photoelectric spectrometer designed by Dobson (1931) is caused by defects in optical stopping and focusing. The considered effect consists of two parts, related to different field-of-view boundaries for the two wavelength bands being measured, and varying relative sensitivity across the field of view for the two bands. The stop problem is readily tested for and corrected, and it may affect only a limited number of instruments. The focussing problem, however, affects all but the earliest instruments, and its solution will require a careful consideration of the involved aspects. G.R.

A82-36431#

DOBSON SPECTROPHOTOMETER CALIBRATIONS, POSSIBLE ERRORS IN OZONE ABSORPTION COEFFICIENTS, AND ERRORS DUE TO INTERFERING POLLUTANT GASES

W. D. KOMHYR, R. D. GRASS (NOAA, Air Resources Laboratories, Boulder, CO), R. D. EVANS, and R. K. LEONARD (Cooperative Institute for Research in Environmental Sciences, Boulder, CO) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 230-235. Research supported by the World Meteorological Organization; U.S. Department of Transportation refs
(Contract DOT-FA78WAI-850)

In connection with the employment of Dobson spectrophotometers as standard instruments for measurements of total ozone, it is imperative that the accuracy of the total ozone measurements be properly assessed. Research within the Geophysical Monitoring for Climatic Change program into the accuracy of ozone observations is currently focussed on possible variations of the Dobson instrument extraterrestrial constants. Attention is given to spectrophotometer calibrations, the systematic ozone measurement error, and interfering trace gas pollutants. It is pointed out that ozone produced photochemically in polluted air near ground level can also be considered an interferer since it renders unreliable background measurements of total ozone. G.R.

ROBLE (National Center for Atmospheric Research, Boulder, CO) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 1. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 572-579. refs

Solar occultation data gathered by the French ultraviolet spectrophotometer telescope on the NASA Orbiting Solar Observatory, scanning between about 50 deg N and 50 deg S between June 1975 and June 1976, are presented. The occultation profiles, observed near 2800 A, contain information on the ozone concentration at altitudes between about 52 and 75 km. Results obtained between June 5 and August 4, 1975 are discussed, longitudinal and latitudinal variations are demonstrated, and comparisons with published ozone density profiles are shown. C.D.

THE SEASONAL VARIATIONS OF OZONE AND TEMPERATURE IN THE MIDDLE AND THE UPPER STRATOSPHERE
S. CHANDRA (NASA, Goddard Space Flight Center, Laboratory for Planetary Atmospheres, Greenbelt, MD) In: Quadrennial International Ozone Symposium, Boulder, CO, August 4-9, 1980, Proceedings. Volume 2. Boulder, CO, International Association of Meteorology and Atmospheric Physics, 1981, p. 1083-1090. refs

The seasonal variations in ozone and temperature inferred from the Nimbus-4 BUV (Backscatter Ultraviolet Spectrometer) and the SCR (Selective Chopper Radiometer) experiments are compared with predictions based on a simplified radiative photochemical model. It is shown that the observations, in agreement with the model calculations, show a systematic phase shift from a summer maximum at 10 mb to a winter maximum at 1 mb with equinoctial maxima at intermediate heights. In contrast, the temperature between these pressure levels shows no appreciable phase shift and the summer maximum prevails at all heights. The observed phase differences in ozone and temperature are shown to be a manifestation of the radiative feedback on the photochemistry of the upper stratosphere. (Author)

A82-36741
ON THE APPLICATION OF A MODEL OF BOUNDARY-LAYER FLOW OVER LOW HILLS TO REAL TERRAIN
J. L. WALMSLEY, J. R. SALMON, and P. A. TAYLOR (Department of the Environment, Atmospheric Environment Service, Downsview, Ontario, Canada) Boundary-Layer Meteorology, vol. 23, May 1982, p. 17-46. Research supported by the National Research Council of Canada. refs

Attempts to apply a computer model (Walmsley et al., 1980) to neutrally-stratified, boundary-layer flow over an isolated hill of moderate slope (Kettles Hill, Alberta) lead to velocity perturbation fields which probably overemphasize the impact of small-scale topographic features. Some numerical smoothing of the digitized terrain input field is found to be helpful in reducing this effect, although such a procedure is somewhat arbitrary. An extension of the original theory results in an improved representation of the effect of small-scale terrain components. These modifications are described and some results of an application of the extended model to Kettles Hill are presented (Author)

SOFT X-RAYS FROM THE SUNLIT EARTH'S ATMOSPHERE
D. L. MCKENZIE, H. R. RUGGE (Aerospace Corp., Space Sciences Laboratory, El Segundo, CA), and P. A. CHARLES (California, University, Berkeley, CA) Journal of Atmospheric and Terrestrial Physics, vol. 44, June 1982, p. 499-508. Research supported by the Aerospace Corp. refs
(Contract NAS8-33235; NASW-3338; CIT-44-727600; NAS5-23315 ; F04701-79-C-0080)

Observations of soft X-ray emission from the sunlit earth atmosphere are presented and compared with the predictions of an earth albedo X-ray theory. The exact theory accounts for the flux of Thomson scattered solar X rays and fluorescently excited K X rays that arise following the absorption of incident X rays as a function of observing geometry. Observations were made at widely separated geometries with the two low-energy detectors of the A-2 experiment on the HEAO-1 satellite. Fitting of the model to the observed spectra results in values for the solar coronal temperature and emission measure that are in good agreement with expected values for the nonflaring sun, indicating that X-ray observations of the sunlit atmosphere may be a useful monitor of solar activity for satellites unable to view the sun directly. The total measured fluorescent line flux is also in agreement with calculations, although the N/O line ratio is not. X-ray fluorescence measurements from the sunlit atmosphere will thus be useful in monitoring atmospheric composition only to the extent that the total line counting rates depend upon the composition. SPATIAL RESOLUTION REQUIREMENTS FOR URBAN STUDIES
R. WELCH (Georgia, University, Athens, GA) International Journal of Remote Sensing, vol. 3, Apr.-June 1982, p. 139-146. refs

Remote sensor data with spatial resolutions corresponding to 0.5-10 m IFOV are required to define adequately the high frequency detail which characterizes the urban scene. Effective analyses of the small parcels, compact structures and narrow street patterns typical of Asian environments will necessitate data of much higher resolution than are required for Western countries. Consequently it is unlikely that satellite image data expected for the 1980s will replace aerial photographs as a primary source of information about urban areas. (Author)

STREAMLINING AND ENSURING MINERAL DEVELOPMENT MUST BEGIN AT LOCAL LAND MANAGEMENT LEVELS Report to the Chairman, Committee on Energy and Commerce, House of Representatives
4 Dec. 1981 24 p refs
(EMD-82-10; B-205344) Avail: SOD

A study of the use of Federal lands, particularily military lands, concluded that success in streamling and accelerating mineral development on Federal lands depends on the Bureau of Land Management state offices ultimately responsible for the implementation of Department of Interior minerals policies. It was found the eastern States Office of the Bureau of Land Management did not effectively deal with potential Federal mineral trespass in the East, and was unable to issue mineral leases and permits on a timely basis. Moreover, it was unable to effectively deal with new areas of mineral interest because of Department actions. Recommendations to improve the mineral trespass program help relieve lease and permit backlogs, maintain dedicated staff, and improve headquarters communications with State offices were made. R.J.F.

COMPARISON OF SATELLITE DERIVED RADIATION BUDGET MEASUREMENTS OVER MONEX DURING 1979 TO 1980
P. K. RAO IN WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 7 p Apr. 1981
Avail: NTIS MF A01; HC WMO

Earth atmosphere radiation budgets derived from polar orbiting satellite radiometers are compared for May to August 1979 and 1980. The data are the differences in outgoing fluxes and albedos between 1980 and 1979. The low values in outgoing longwave radiation are associated with high and thick clouds which are relatively cold. High albedo values over this region are associated with clouds and snow over the mountains; moderately high values are observed over Saudi Arabia. Author (ESA)

COMPARISON OF STORM-TIME CHANGES OF GEOMAGNETIC FIELD AT GROUND AND AT MAGSAT ALTITUDES, PART 2
N. DEJESUSPARADA, Principal Investigator, R. P. KANE, and N. B. TRIVEDI Apr. 1982 42 p Sponsored by NASA ERTS
(E82-10325; NASA-CR-168904; NAS 1.26:168904;
INPE-2367-RA/161-PT-2) Avail: NTIS HC A03/MF A01 CSCL 08N

Geomagnetic field variations were studied by considering the parameter delta H which indicated H(observed) minus H(model), where H = (X squared + Y squared) (1/2) where X, Y, and Z are the components actually observed. Quiet time base values for 5 deg longitude belts were estimated. After subtracting these from the observed values, the residual delta H (dawn) and delta H (dusk) were studied for the two major storms. It was noticed that the dusk values attained larger (negative) values for a longer time, than the dawn value. Some changes in delta Y and delta Z were also noticed, indicating possibilities of either meridional currents and/or noncoincidence of the central plane of the ring current with the equatorial plane of the Earth. Other details are described. M.G.

(NASA-TM-84471; NAS 1.15:84471) Avail: NTIS HC A03/MF A01 CSCL 13B

Several sets of in situ ozone (O3) measurements were made by a NASA aircraft in support of the laser absorption spectrometer (LAS) remote sensor. These measurements were designed to provide comparative O3 data for the LAS sensor. The LAS, which was flown on a second aircraft, remotely measured the vertical burden of O3 from the aircraft to the surface. In situ results of the air quality (O3 and B sub scat) and meteorological (temperature and dewpoint) parameters for three correlative missions are presented. The aircraft flight plans, in situ concentration profiles and vertical burdens, and measurement errors are summarized. B.W.

A COLOR-RATIO MAP OF MERCURY
B. HAPKE, C. CHRISTMAN, B. RAVA (Pittsburgh, University, Pittsburgh, PA), and J. MOSHER (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Lunar and Planetary Science Conference, 11th, Houston, TX, March 17-21, 1980, Proceedings. Volume 1. New York, Pergamon Press, 1980, p. 817-821. refs

Orange and UV frames are used to construct a color-ratio map of the portion of Mercury imaged by Mariner 10, with at least two independent color-ratio images being used for each region in order to prevent spurious, blemish-induced color. Color differences appear to be smaller than those of the moon, and many apparently fresh craters and their ray systems tend to be bluer than their surroundings. Regions of interesting color contrast are noted, and it is concluded that there is little evident correlation of color with either geology or topography. O.C.

PREFLARE INCREASES IN SOLAR COSMIC RAYS RELEVANT TO THE MODE OF ENERGY ACCUMULATION IN THE ACTIVE REGIONS ASSOCIATED WITH LARGE FLARES
G. M. BLOKH, O. P. GRIGORIAN, and B. M. KUZEVSKII (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 77-80. refs

Evidence of preflare increases in the electron and proton solar cosmic ray components is analyzed to develop a model of the processes involved. Data from the Prognoz-6 and Helios-1 and -2 satellites are cited as proof of a temporal form of particle arrival similar to a flare-produced event. The electron data indicates a set of individual events of acceleration up to 5 MeV and proton data shows the same process up to tens of MeV, implying a quasicontinuous generation of particles. The low-energy particle increase has been observed to occur several days in advance of a flare, with the particle acceleration happening in subregions of an imminent flare event. It is suggested that Coulomb interactions in the two-component plasma are responsible for the accelerations, which do not culminate in a flare until the ionization energy loss on the electrons and protons becomes insignificant compared to the acceleration rate. M.S.K.

A82-22596
COMPARISON OF SOLAR PROTON ACTIVITY IN 1967 AND 1969 WITH THAT IN 1978 AND 1979 AS MEASURED ONBOARD VENERA 4, 6, 11, 12 SPACE PROBES
S. I. ERMAKOV, N. N. KONTOR, G. P. LIUBIMOV, N. V. PERESLEGINA, and T. G. KHOTILOVSKAIA (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 81-84.

A comparison of the proton activity in 1967 and 1969 with that in 1978-1979 shows that proton activity in 1967 was much below the level of 1978-1979 owing to the high solar activity during the rise phase of the 21st cycle. It is also found that the activity in 1969 was much above the level of 1978-1979, although the smoothed sunspot number was approximately 110. This is seen as indicating that proton activity is weakly correlated with the smoothed sunspot number and is determined largely by the phase of the solar cycle. The greatest proton activity was observed in phases of maximum solar activity and solar activity decay. C.R.

SPACECRAFT DETERMINATION OF ENERGETIC PARTICLE PROPAGATION PARAMETERS - THE 1 JANUARY 1978 SOLAR EVENT
K. KECSKEMETY, T. I. GOMBOSI, A. J. SOMOGYI, A. SZENTGALI (Magyar Tudomanyos Akademia, Kozponti Fizikai Kutato Intezet, Budapest, Hungary), G. WIBBERENZ, G. GREEN, H. KUNOW, V. STEFFENS (Kiel, Neue Universitaet, Kiel, West Germany), V. G. KURT, and IU. I. LOGACHEV (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 89-92. refs

Intensity-time profiles in similar energy intervals measured by the longitudinally separated Helios 1/2 and Prognoz 6 spacecraft are used in studying coronal injection and interplanetary propagation. The scattering mean free path for the interplanetary propagation turns out to be in essence the same for the three locations. If the coronal propagation is described by a Reid-Axford type diffusion model, the diffusion coefficient is approximately constant below 200 MeV (about 0.1 AU); above this rigidity it exhibits a power law increase. C.R.

A82-22614
THE MODEL OF THE COSMIC RAY ENRICHMENT BY HELIUM-3
L. G. KOCHAROV (Leningradskii Politekhnicheskii Institut, Leningrad, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 175-178. refs

A model of He(3) enrichment is used to demonstrate that a stratified electron shock front propagating through the upper chromosphere may produce the He(3) enrichment in solar cosmic rays. The model also shows that bursts of hard X-rays, microwaves and UV radiation are produced. An analysis of available data shows that He(3) rich events are accompanied by hard X-rays, whose fluxes are in good agreement with theoretical estimations by Kocharov et al. (1980). D.L.G.

Finnish Geodetic Institute research work and research capabilities relevant to Blue Road Geotraverse studies are described. Institute activities cover precise levelling, high-precision gravimetry on land uplift gravity lines, earth tide observations, gravity mapping, geoid calculations, satellite geodesy, VLBI techniques, and geometric geodesy. O.C.

A82-30314
MAGNETIC ANOMALIES AS A REFERENCE FOR GROUND-SPEED AND MAP-MATCHING NAVIGATION
C. TYREN Journal of Navigation, vol. 35, May 1982, p. 242-254.

The use of the earth's magnetic field for ground referenced motion and position measurements is discussed. A magnetic terrain-navigation concept is set forth, and its sensor configuration, data processing and data storage unit, and navigation data interface unit are discussed. The navigational accuracy of the system is assessed; one particular advantage of terrain navigation systems is that ground-speed accuracy is independent of vehicle speed until speeds are reached at which the sensors and/or computer operations are too slow to track the vehicle path. The system is therefore excellent at low speeds and can advantageously be used for hovering operations. The results of field tests indicate that the feasibility of both ground-speed and map-matching methods is indeed promising. C.D.

A82-30778
MAGNETIC CHARTS OF CANADA DERIVED FROM MAGSAT DATA
L. R. NEWITT, E. DAWSON, R. L. COLES, and A. NANDI (Department of Energy, Mines, and Resources, Div. of Geomagnetism, Ottawa, Canada) Geophysical Research Letters, vol. 9, Apr. 1982, p. 246-249. refs

The feasibility of regional magnetic chart production by means of Magsat scalar and vector data is assessed through comparisons of Magsat north, east, vertical and total field charts with Canadian aeromagnetic data. After reducing all satellite and aeromagnetic data to sea-level, gridding at 1-deg intervals of longitude and latitude, and contouring the charts, it was determined that good agreement exists between the two data sets, with an overall rms difference of 150 nT. In all components, the greatest discrepancies between data sets occur in the northern U.S. and along the east coast of Canada. O.C.

INITIAL SCALAR MAGNETIC ANOMALY MAP FROM MAGSAT
R. A. LANGEL (NASA, Goddard Space Flight Center, Greenbelt, MD), J. D. PHILLIPS (U.S. Geological Survey, Reston, VA), and R. J. HORNER (Computer Sciences Corp., Silver Spring, MD) Geophysical Research Letters, vol. 9, Apr. 1982, p. 269-272. refs

Magsat data acquired during the November 1979-June 1980 mission was used to derive a scalar magnetic anomaly map covering +50 to -50 deg geographic latitude, and the separation of anomaly fields from core and external fields was accomplished by techniques developed for POGO satellite data. Except in the Atlantic and Pacific at latitudes south of -15 deg, comparison of the Magsat map with its POGO data-derived counterpart shows basic anomaly patterns to be reproducible, and higher resolution due to Magsat's lower measurement altitude. Color-coded scalar anomaly maps are presented for both satellites. O.C.

INITIAL VECTOR MAGNETIC ANOMALY MAP FROM MAGSAT
R. A. LANGEL, C. C. SCHNETZLER (NASA, Goddard Space Flight Center, Greenbelt, MD), J. D. PHILLIPS (U.S. Geological Survey, Reston, VA), and R. J. HORNER (Computer Sciences Corp., Silver Spring, MD) Geophysical Research Letters, vol. 9, Apr. 1982, p. 273-276. refs

Global magnetic component anomaly field maps have been derived from the Magsat vector magnetometer data obtained from November 1979 through May 1980. The amplitude of variations of the components over the maps are between 10 and 15 nT, well above the noise in the data. Averaged data, in 2-by-2 deg blocks, exhibit standard errors of the mean of about 1 nT over most of the X and Z maps, and about 2 nT over most of the Y maps. Errors rise to about twice these amounts near the auroral belts. Most of the anomalies in the component data are consistent with a crustal magnetization model which incorporates dipoles aligned only in the direction of the main field. However, there appear to be some regions which require dipoles aligned in some other direction i.e., remanent magnetization. (Author)

A SATELLITE MAGNETIC MODEL OF NORTHEASTERN SOUTH AMERICAN AULACOGENS

M. B. LONGACRE, W. J. HINZE, and R. R. B. VON FRESE (Purdue University, West Lafayette, IN) Geophysical Research Letters, vol. 9, Apr. 1982, p. 318-321. refs
(Contract NAS5-25030)

Magnetic modeling of the Amazon River and Takatu Aulacogens in northeastern South America illustrate the utility of satellite magnetic data in characterizing the properties and structure of the lithosphere. Specifically, reduction of preliminary Magsat scalar magnetic anomaly data to an equivalent condition of vertical polarization shows a general correlation between magnetic anomaly minima and the Amazon River and Takatu Aulacogens. Surface gravity data demonstrate a correlative positive anomaly. Spherical earth modeling of the magnetic data indicates a less magnetic crust associated with the aulacogens which is compatible with previous studies over the Mississippi River Aulacogen and Rio Grande Rift in North America. ALBEDO AND ANGULAR CHARACTERISTICS OF THE REFLECTANCE OF THE UNDERLYING SURFACE AND CLOUDS [AL'BEDO I UGLOVYE KHARAKTERISTIKI OTRAZHENIIA PODSTILAIUSHCHEI POVERKHNOSTI I OBLAKOV]

K. IA. KONDRATEV, V. I. BINENKO, L. N. DIACHENKO, V. I. KORZOV, and V. V. MUKHENBERG Leningrad, Gidrometeoizdat, 1981. 232 p. In Russian. refs

Information on the reflectance in the short-wave region of the spectrum of clouds and of the system comprising the earth's surface and atmosphere is discussed. Data are presented on the total albedo of the underlying surface and on the geographical distribution of albedo. Attention is given to the principles determining the spectral distribution of the albedo. Also considered are the laws governing the angular distribution of the reflectance of various types of natural formations. C.R.

THE RECOGNITION OF EXTENDED TARGETS - SAR IMAGES FOR LEVEL AND HILLY TERRAIN

J. A. STILES, V. S. FROST, J. C. HOLTZMAN, and K. S. SHANMUGAM (University of Kansas Center for Research, Inc., Lawrence, KS) IEEE Transactions on Geoscience and Remote Sensing, vol. GE-20, Apr. 1982, p. 205-211. Research supported by the California Institute of Technology refs
(Contract NAS7-100)

Radar image simulation techniques are used to determine the character of SAR images of area-extensive targets, for the cases of flat underlying terrain and of moderate relief, with a view to the severity of elevation change effects on the detection and recognition of boundaries and shapes. The experiment, which demonstrated these effects on shapes and boundaries, was performed in order to establish Seasat-A SAR performance. Attention is given to the geometry/propagation effects in range perspective imaging that must be known for information extraction. O.C.

ESTABLISHMENT OF TERRESTRIAL REFERENCE FRAMES BY NEW OBSERVATIONAL TECHNIQUES

P. L. BENDER (Joint Institute for Laboratory Astrophysics; National Bureau of Standards, Quantum Physics Div., Boulder, CO) In: Reference coordinate systems for earth dynamics; Proceedings of the Fifty-sixth Colloquium, Warsaw, Poland, September 8-12, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 23-36. NBS-supported research refs
(Contract NASA ORDER S-65000-B)

It is anticipated that terrestrial reference systems for geodynamics studies which include adopted plate motion models will be introduced for the analysis of both LAGEOS satellite and very long baseline interferometry ranging data. One of the possible approaches involves adjustment of ground station coordinates in conjunction with solutions for Universal Time 1 (UT1) and polar motions as functions of time. Another method uses principal value decomposition to reduce the number of degrees of freedom being solved for by three. In a third alternative, the values of UT1 and polar motion derived from the available data by means of the initial set of coordinates are kept fixed, and an appropriate block of data is reanalyzed using the previously determined values of UT1 and polar motion so that a new set of station coordinates can be derived. O.C.

THE DEFINITION OF THE TERRESTRIAL COORDINATE FRAME BY LONG BASELINE INTERFEROMETRY

W. H. CANNON (York University, Toronto, Canada) and M. G. ROCHESTER (Newfoundland, Memorial University, St. John's, Canada) In: Reference coordinate systems for earth dynamics; Proceedings of the Fifty-sixth Colloquium, Warsaw, Poland, September 8-12, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 111-118. refs

This paper examines the question of the definition of the celestial and terrestrial coordinate frames by the technique of long baseline interferometry. It demonstrates how the celestial coordinate frame may be usefully defined in terms of basis l-forms associated with the advancing phase fronts of the radiation fields from compact radio sources using only interferometer observables. The paper then proceeds to show how the terrestrial coordinate frame could be usefully defined, incorporating fully the effects of plate tectonics and secular motion of the observatories, by an application of the theory of continuum mechanics to interferometer observations. ORIGIN AND SCALE OF COORDINATE SYSTEMS IN SATELLITE GEODESY

J. B. ZIELINSKI (Polska Akademia Nauk, Centrum Badan Kosmicznych, Warsaw, Poland) In: Reference coordinate systems for earth dynamics; Proceedings of the Fifty-sixth Colloquium, Warsaw, Poland, September 8-12, 1980. Dordrecht, D. Reidel Publishing Co., 1981, p. 239-250. refs

The center of mass of the earth is commonly taken as origin for the coordinate systems used in satellite geodesy. In this paper the notion of the 'geocenter' is discussed from the point of view of mechanics and geophysics. It is shown that processes in and above the crust have practically no impact on the position of the geocenter. It is possible however that motions of the inner core may cause variations of the geocenter of the order of 1 m. Nevertheless the geocenter is the best point for the origin of a coordinate system. Mather's method of monitoring geocenter motion is discussed, and some other possibilities are mentioned. Concerning the scale problem, the role of the constant GM and time measurements in satellite net determinations are briefly discussed. (Author)

GEOID HEIGHT-AGE RELATION FROM SEASAT ALTIMETER PROFILES ACROSS THE MENDOCINO FRACTURE ZONE

D. T. SANDWELL and G. SCHUBERT (California, University, Los Angeles, CA) Journal of Geophysical Research, vol. 87, May 10, 1982, p. 3949-3958. refs

(Contract NAG5-152)

Twenty-eight Seasat altimeter profiles crossing the Mendocino Fracture Zone are used together with seafloor ages determined from magnetic lineations to estimate the change in oceanic geoid height with age, between ages of 15 and 135 m.y. An unbiased estimate of the overall geoid offset along each profile is determined from a least-squares fit of the along-track derivative of the geoid to the geoid slope predicted from a simple two-layer gravitational edge effect model. Uncertainties based upon the statistical properties of each profile are also determined. A geoid slope-age relation is constructed by normalizing the geoid offsets and uncertainties by the age offsets. The results are in agreement with geoid slope-age relations determined from symmetrically spreading ridges (Sandwell and Schubert, 1980). However, the fracture zone estimates have smaller uncertainties and show less scatter. A comparison of these results with the geoid slope-age prediction of the boundary layer cooling model shows that the thermal structure begins to deviate from this model at an early age (20-40 m.y.). A plate cooling model with a thickness of 125 km is most compatible with the geoid slope-age estimates, although significant deviations occur; these may indicate that the lithospheric thermal structure is not entirely age dependent. (Author)

ESTABLISHING GEODETIC-GEODYNAMIC PARAMETERS USING LUNAR LASER RANGE MEASUREMENTS [DIE BESTIMMUNG GEODAETISCH-GEODYNAMISCHER PARAMETER MIT HILFE VON LASERDISTANZMESSUNGEN ZUM MOND]

L. BALLANI (Deutsche Akademie der Wissenschaften, Zentralinstitut fuer Physik der Erde, Potsdam, East Germany) Gerlands Beitraege zur Geophysik, vol. 91, no. 2, 1982, p. 121-140. In German. refs

The state of the art of lunar laser range measurements is reviewed. The transit time of the signals is simulated to determine if the effects of the final signal speed should be taken into account, and modeling of the signal time delay is treated in the frame of earth-moon dynamics. Results concerning coordinates and distances of laser stations in the United States, USSR and Austria, and essential UTO and UT1 analyses are presented. Conditions for establishing the geodetic-geodynamic parameters are determined, and preliminary estimations are made. (Author)

COMPARING LINEAMENTS INTERPRETED FROM LANDSAT IMAGERY AND TOPOGRAPHIC MAPS WITH REPORTED FAULTS IN SOUTHWEST MONTANA

R. C. HOWE and D. M. THOMPSON (Indiana State University, Terre Haute, IN) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 237-246. refs

Poor resolution has usually prevented detection of features smaller than 60 by 80 meters on Landsat imagery. However, features previously not known to be related have been shown to be continuous or semicontinuous over large distances as a result of the synoptic view provided by satellites. In particular, numerous authors have noted the usefulness of Landsat imagery for lineament interpretations. The present investigation has the objective to compare the results of the lineament interpretation from Landsat imagery and topographic maps with reported faults in a portion of southwest Montana. The 1:1,000,000 color composite Landsat image was found to be clearly superior to 1:250,000 topographic maps for detecting lineaments. Almost twice as many lineaments were visible on the image as could be interpreted from the maps. However, the number of reported faults matching lineaments interpreted from each of these two data bases was similar. G.R.

The results of modeling satellite-elevation magnetic and gravity data using the constraints imposed by near surface data and seismic evidence shows that the magnetic minimum can be accounted for by either an intracrustal lithologic variation or by an upwarp of the Curie point isotherm. The long wavelength anomalies of the NOO's-vector magnetic survey of the conterminous U.S. were contoured and processed by various frequency filters to enhance particular characteristics. A preliminary inversion of the data was completed and the anomaly field calculated at 450 km from the equivalent magnet sources to compare with the POGO satellite data. Considerable progress was made in studing the satellite magnetic data of South America and adjacent marine areas. Preliminary versions of the 1 deg free-air gravity anomaly map (20 m gal contour interval) and the high cut (lambda approximately 8 deg) filtered anomaly maps are included. A.R.H.

GEODETIC MONITORING OF TECTONIC INFORMATION. TOWARD A STRATEGY
1981 118 p refs
Avail: NTIS HC A06/MF A01 CSCL 08G

The time scale and time lapse over which crustal movements are traditionally monitored by geodesy and seismology was studied. Efforts are made to bridge this gap through increasing the frequency of geodetic measurements in the regions of particular interests, establishment of a global network of long and ultralong period seismometers, and development of geophysical and geodetic intrumentation that should be capable of measuring rates of crustal deformation over arbitrary time scales. The following measurements were undertaken: (1) on a global scale; (2) deformation near active plate boundaries; (3) deformation within plate interiors and other neotectonic motion; and (4) instrumentation for measuring tectonic deformation. Programs are being adapted to the UNIVAC 1000 computer and others are being developed for immediate utilization in processing MAGSAT data. The magnetization intensity, susceptability, Koeningsberger ratio, NMR stbility against alternated fields and temperature, and the Curie temperature were determined for some rock formations with mineralogical compositions stable to the intermediate for lower continental crust and to upper manele conditions. Attempts to residuate crustal anomalies from one selected profile passing through western mediterranean using procedures commonly used at NASA yielded dubious results because of uncertainties in the adoption of coefficients in the expression accounting for the effect of equatorial ring currents and the empirical approach used for other corrections. Instead, filtering techniques are to be applied to each profile once invesigator B tapes relative to the whole planet are received. A.R.H.

The anomalous potential of gravity and magnetic fields and their spatial derivatives on a spherical Earth for an arbitrary body represented by an equivalent point source distribution of gravity poles or magnetic dipoles were calculated. The distribution of equivalent point sources was determined directly from the coordinate limits of the source volume. Variable integration limits for an arbitrarily shaped body are derived from interpolation of points which approximate the body's surface envelope. The versatility of the method is enhanced by the ability to treat physical property variations within the source volume and to consider variable magnetic fields over the source and observation surface. A number of examples verify and illustrate the capabilities of the technique, including preliminary modeling of potential field signatures for Mississippi embayment crustal structure at satellite elevations. Preliminary results of MAGSAT data analysis are described. Regional anomaly maps (deviations from the MGST model field) for X,Y,Z, and F in the area of 115 to 155 deg E and 20 to 60 deg N were obtained. A similar map for the geomagnetic total force anomaly in the vicinity of Japan showed that the observed anomaly can be explained by the difference in crustal magnetization between the Japan Sea and the Japan Island, which reflects a difference of 25 km in the thickness of the magnetized layer. The MAGSAT record of a sudden comencement of a magnetic storm above the South Atlantic Ocean showed a reverse impulse particularly in the D-component. Results relating to toroidal currents in the ionosphere, transverse and parallel perturbations over the polar regions, the relationship between field aligned currents and precipitating electrons, and the calculation of the subsatellite electric field are also discussed. M.G

MAGSAT Investigator-B tapes were preprocessed by (1) removing all data points with obvious erroneous values and location errors; (2) removing smaller spikes (typically 15 nT or more), and deleting data tracks with fewer than 20 points; and (3) removing a linear trend from each track. The remaining data were recorded on tape for use by the equivalent source mapping (ESMAP) program which uses a least squares algorithm to fit the magnetization parameter of the grid of equivalent source dipoles in the crust to satellite data acquired at different times and locations. ESMAP was implemented on the TASC computing system and modified to read preprocessed MAGSAT tapes and interface with TASC plotting software. Some verification of the software was accomplished. Gridded 1-degree mean values of gravity anomaly and sea surface undulation computed from SEASAT radar altimeter were obtained and brought on line. A.R.H.

INVESTIGATION OF ANTARCTIC CRUST AND UPPER MANTLE USING MAGSAT AND OTHER GEOPHYSICAL DATA Quarterly Status Technical Progress Report
C. R. BENTLEY, Principal Investigator 16 Apr. 1982 1 p ERTS
(Contract NAS5-25977)
(E82-10309; NASA-CR-168884; NAS 1.26:168884; QSTPR-9)
Avail: NTIS HC A02/MF A01 CSCL 08G

Plans to create an improved version of the MAGSAT magnetic anomaly map by more carefully scrutinizing the accepted data for field-aligned current effects are discussed. Data are continued to a 300 km surface for the compilation of a final map. Based on this set of data, vector anomaly maps over Antarctica are planned. A high-pass anomaly map with a cut-off wavelength of approximately 1500 km is also envisioned. It is suspected that longer-wavelength features have their origin outside the crust.

INVESTIGATION OF GEOMAGNETIC FIELD FORECASTING AND FLUID DYNAMICS OF THE CORE Quarterly Progress Report, 1 Jan. - 31 Mar. 1982
E. R. BENTON, Principal Investigator 1 Apr. 1982 7 p refs ERTS
(Contract NAS5-25957)
(E82-10310; NASA-CR-168885; NAS 1.26:168885; QPR-9) Avail: NTIS HC A02/MF A01 CSCL 08G

It was established that the total absolute magnetic flux crossing the core- mantle boundary has been a constant of the core motion for the last 50 years. This provides a scalar constraint that could be added to the geometric modelling procedure. The GSFC 8 8/80 model is being evaluated. The absolute magnetic flux linking the CMB to that model was plotted as a function of time during the span covered by the data, and increasing truncation level. The inclusion of the standard error of each Gauss coefficient derived from the statistics of fit in the GSFC 9/80 model is useful. The magnitude and sense (upwelling or downe welling) of vertical fluid motion adjacent to the core-mantle boundary was calculated using the model. Standard errors were found to be sufficiently small at all but one or two of the 40 or more critical points of B sub r. They do not nearly overlap the value gamma u/gamma r = 0. It is concluded that the core is upwelling and downwelling at an observationally detectable level. A.R.H.

(E82-10312; NASA-CR-168888; NAS 1.26:168888) Avail: NTIS HC A02/MF A01 CSCL 05B

The cleaning and magnetic tape storage of spherical Earth processing programs are reported. These programs include: NVERTSM which inverts total or vector magnetic anomaly data on a distribution of point dipoles in spherical coordinates; SMFLD which utilizes output from NVERTSM to compute total or vector magnetic anomaly fields for a distribution of point dipoles in spherical coordinates; NVERTG; and GFLD. Abstracts are presented for papers dealing with the mapping and modeling of magnetic and gravity anomalies, and with the verification of crustal components in satellite data. T.M.

IMPROVED DEFINITION OF CRUSTAL MAGNETIC ANOMALIES FOR MAGSAT DATA Final Report
R. D. BROWN, J. F. FRAWLEY, W. M. DAVIS, R. D. RAY, E. DIDWALL, and R. D. REGAN, Principal Investigators 15 Mar. 1982 23 p refs ERTS
(Contract NAS5-25882)
(E82-10314; NASA-CR-168889; NAS 1.26:168889) Avail: NTIS HC A02/MF A01 CSCL 08G

The routine correction of MAGSAT vector magnetometer data for external field effects such as the ring current and the daily variation by filtering long wavelength harmonics from the data is described. Separation of fields due to low altitude sources from those caused by high altitude sources is affected by means of dual harmonic expansions in the solution of Dirichlet's problem. This regression/harmonic filter procedure is applied on an orbit by orbit basis, and initial tests on MAGSAT data from orbit 1176 show reduction in external field residuals by 24.33 nT RMS in the horizontal component, and 10.95 nT RMS in the radial component. Accomplishments with regard to the mapping and analysis of MAGSAT data for the investigation of correlations between the magnetic field characteristics of South American and African shields are reported. Significant results in the interpretation of the global total-field anomalies and the anomaly patterns of Africa and South America are discussed. The central position of the Brazilian shield tends to form a negative total-field anomaly, consistent with findings for shields in equatorial Africa. Sedimentary sequences in the Amazon basin and in the Rio de Janeiro-Sao Paolo areas exhibit positive anomalies, also consistent with equatorial Africa. Results for the Caribbean Sea and Guyana regions are also described.

Several possible causes for the east-west striping of the MAGSAT anomaly maps are listed and discussed including: (1) the inadequacy of the field model used for core-crustal separation of geomagnetic anomalies; (2) external field noise remaining in the available maps; (3) east-west trends of crustal uplift and depression; (4) east-west trends to convection patterns in the mantle; (5) bands of crustal materials of similar metamorphic grade; (6) variations in the depth of the Curie isotherm; and (7) the data processing techniques used to overcome the absence of tie lines and orbital path of MAGSAT.

The problems associated with the use of an interactive magnetic modeling program are reported and a publication summarizing the MAGSAT anomaly results for Africa and the possible tectonic associations of these anomalies is provided. An overview of the MAGSAT scalar anomaly map for Africa suggested a correlation of MAGSAT anomalies with major crustal blocks of uplift or depression and different degrees of regional metamorphism. The strongest MAGSAT anomalies in Africa are closely correlated spatially with major tectonic features. Results indicate that the Bangui anomaly may be caused by a central old Precambrian shield, flanked to the north and south by two relatively young sedimentary basins.

MAGSAT ANOMALY MAP AND CONTINENTAL DRIFT Progress Report

J. L. LEMOUEL, Principal Investigator, A. GALDEANO, and J. DUCRUIX 1 Dec. 1981 5 p refs Sponsored by NASA ERTS
(E82-10326; NASA-CR-168905; NAS 1.26:168905) Avail: NTIS HC A02/MF A01 CSCL 08G

Anomaly maps of high quality are needed to display unambiguously the so called long wave length anomalies. The anomalies were analyzed in terms of continental drift and the nature of their sources is discussed. The map presented confirms the thinness of the oceanic magnetized layer. Continental magnetic anomalies are characterized by elongated structures generally of east-west trend. Paleomagnetic reconstruction shows that the anomalies found in India, Australia, and Antarctic exhibit a fair consistency with the African anomalies. It is also shown that anomalies are locked under the continents and have a fixed geometry.

INVESTIGATIONS OF MEDIUM WAVELENGTH MAGNETIC ANOMALIES IN THE EASTERN PACIFIC USING MAGSAT DATA Interim Report, Oct. - Dec. 1981

C. G. A. HARRISON, Principal Investigator Feb. 1982 3 p ERTS
(E82-10330; NASA-CR-168909; NAS 1.26:168909) Avail: NTIS HC A02/MF A01 CSCL 08G

Efforts concerning spherical harmonic modeling of the Earth's magnetic field and the use of such models in removing core produced magnetic fields from magnetic fields of crustal origin are discussed. Results indicate that the terms of a spherical harmonic expansion do not uniquely determine a given wavelength of signal as the terms in a Fourier series do. Addition of terms of higher degree and order to a spherical harmonic expansion tend to fine tune the amplitude of the terms of lower degree and order. As a result, removal of such a model from a regional data set will not remove long wavelengths completely.

COMPUTER-PROCESSED GEOPHYSICAL ATLAS OF DIGITAL DATA FOR THE EAST COAST MARGIN OF THE UNITED STATES FROM SURFACE AND SPACECRAFT DATA
C. BOWIN, J. MILLIGAN, and K. DUNKLE Dec. 1981 36 p refs Sponsored in part by Joint Oceanograph Inst., Inc.
(Contract N00014-82-C-0019)
(AD-A111388; WHOI-81-104) Avail: NTIS HC A03/MF A01 CSCL 08J

This atlas comprises maps for the East Coast margin of the United States of free-air gravity anomaly, geoid anomaly, regional geoid anomaly, residual geoid anomaly, magnetic crustal anomaly, and bathymetry. Data from surface measurements, GEOS-III and MAGSAT Satellites, GEM-9 spherical harmonic coefficients, and SYNBAPS bathymetry profiling systems were utilized. Estimated error maps for the geoid data are not included because for the marine areas, these data are uniformly of very low error. The data are presented in three sets of maps of northern, central, and southern portions of the margin. Author (GRA)

A COMPARISON OF POLE POSITIONS DERIVED FROM GPS SATELLITE AND NAVY NAVIGATION SATELLITE OBSERVATIONS
W. H. WOODEN, II 6 Jan. 1982 18 p refs Presented at the 3rd Intern. Geodetic Symp. on Satellite Doppler Positioning
(AD-A110765) Avail: NTIS HC A02/MF A01 CSCL 17G

The observation of the motion of the Earth's spin axis with respect to the crust has been done continuously since the latter part of 1899 by the International Service. With the advent of new technologies, new determinations of polar motion have been possible. Doppler tracking of the Navy Navigation Satellites has provided estimates of the polar motion on a permanent basis since 1969. Currently, these estimates are done at the Defense Mapping Agency and are distributed to several agencies including the Bureau International de l'Heure (BIH), which has the responsibility of centralizing polar motion data. The NAVSTAR Global Positioning System (GPS) is a new navigation satellite system which will eventually replace the existing Navy Navigation Satellite System. As a byproduct of the orbit estimation process for the GPS satellites, values for the position of the pole are determined. In this paper the two different methods for computing the pole's position from satellite observations are described. The most recent results from each method are compared to each other and to the standard BIH values. Author (GRA)

SEISMIC AND GEODETIC STUDIES OF THE IMPERIAL VALLEY, CALIFORNIA Final Technical Report
D. D. JACKSON (UCLA) 1 May 1981 50 p refs
(Contract W-7405-ENG-48)
(DE82-001686; UCRL-15382) Avail: NTIS HC A03/MF A01

Patterns of gravitational and thermal anomalies, strike slip faulting, volcanism in the Imperial Valley were investigated. These patterns suggest that the continental crust may still be spreading. In recent years, the United States Geological Survey and Caltech have added new seismic stations into a dense network in the Imperial Valley to study in detail the relationship between geothermal areas and earthquakes, and to understand the tectonic processes taking place there. The following areas were examined: (1) crustal structure data on P wave arrival times of local earthquakes; (2) leveling data for evidence of tectonic subsidence or uplift; and (3) correlations between seismicity, seismic velocity, geodetic motion, geothermal activity, and local geology. FIELD MEASUREMENTS IN SUPPORT OF DISPERSION MODELING IN COMPLEX TERRAIN (1980) Annual Report
W. EBERHARD Jul. 1981 26 p refs
(PB82-148644; NOAA-81102005) Avail: NTIS HC A03/MF A01 CSCL 13B

The EPA is engaged in a concerted effort to develop models for prediction of air quality in complex terrain. Remote sensors and an instrumented aircraft from the Wave Propagation Laboratory and other elements of NOAA's Environmental Research Laboratory are participating with EPA in a series of field experiments that are necessary for development and validation of such models. A calibrated particulate mapping lidar with multiwavelength capability is the principal remote sensor. NOAA's accomplishments during the first year (February 1980 - January 1981) under the EPA-NOAA Interagency Agreement for Energy and Environment are participation by lidar and other sensors in EPA's Small Hill Impaction Study No. 1 studying plume impingement or elevated terrain; preliminary experiment by instrumented aircraft on power plant plumes near Farmington, New Mexico; lidar participation in DOE's 1980 ASCOT experiment investigating nocturnal drainage flows in mountainous terrain; and improvements to the lidar for plume mapping applications. THE EARTH'S GRAVITY FIELD TO DEGREE AND ORDER 180 USING SEASAT ALTIMETER DATA, TERRESTRIAL GRAVITY DATA AND OTHER DATA
R. H. RAPP Hanscom AFB, Mass. AFGL Dec. 1981 58 p refs
(Contract F19628-79-C-0027; AF PROJ. 2309)
(AD-A113098; DGS-322; SCIENTIFIC-12; AFGL-TR-82-0019)
Avail: NTIS HCA04/MF A01 CSCL 08N

The spherical harmonic expansion of the Earth's gravitational field has been obtained to degree 180 by combining several sources of data. The first data set was an a priori set of potential coefficients to degree 36 based on number of recent solutions including a substantial of resonance terms. A second data set was a 1 x 1 deg anomaly field derived from the SEASAT data set, while the third data set was an updated 1 x 1 deg terrestrial field. The last two fields were combined into one set containing 56761 1 x 1 deg values. The remaining values were computed from the a priori potential coefficients. A rigorous combination solution was not carried out. Instead all anomalies were weighted in such a way that the normal equations were diagonal. The results of the adjustment were 64800 1 x 1 deg anomalies that were expanded into spherical harmonics using the optimum quadrature procedure developed by Colombo. Accuracy estimates for each coefficient were obtained considering noise propagation and sampling error caused by the finite block size in which the anomalies are given. The percentage error of the solution reaches 100% near degree 120. The coefficients and their accuracy to degree 50 are listed in an appendix. GRA

EXTRAGALACTIC COSMIC RAYS, THEIR SOURCES AND SPECTRUM
R. SILBERBERG and M. M. SHAPIRO (U.S. Navy, Naval Research Laboratory, Washington, DC) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 356-359. refs

Studies of air showers, particularly by Watson et al. (1980), have shown that cosmic rays at energies above 10 to the 19th eV are likely to be extragalactic in origin. The energy density above 10 to the 19th eV is 3 x 10 to the -8th eV/cu cm, and the exponent of the integral energy spectrum is -1.4 plus or minus 0.1. For estimating the energy density of relativistic protons (E greater than GeV) in metagalactic space an energy input rate W sub p into protons similar to that for relativistic electrons (W sub e) in active galactic nuclei is assumed. For cosmic rays in the supercluster, W sub p is found to be 10 to the -4th (plus or minus 1) eV/cu cm. This estimate for W sub p is supported by the following internal consistency argument: this spectrum at 10 to the 9th eV, when extended with an exponent -1.4, smoothly joins the extragalactic spectrum at 10 to the 19th eV, having a similar spectral slope. (The exponent -1.4 also is that of galactic cosmic rays when corrected for rigidity-dependent leakage from the Galaxy.) (Author)

THE APPROXIMATE 1 GEV SOLAR COSMIC RAYS IN THE FORBUSH-EFFECT OF FEBRUARY 15, 1978
G. P. LIUBIMOV, V. I. TULUPOV, and E. A. CHUCHKOV (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 121-123. refs

Differences in the behavior of the galactic cosmic-ray intensity are studied using the data from the Alert and Deep River neutron monitors from February 14 to 17, 1978. The behavior of the intensity at Alert and Deep River is normalized to the initial stage of February 14, before the Forbush effect, and the additional differential flux reaches 15 percent. The observed anomalous differences are explained by an additional particle flux of about 1 GeV of solar origin in the Forbush effect. D.L.G.

(Contract NAS5-20062; BMFT-RV14-B8/74;
BMFT-01-OI-017-ZA/WF/WRK-1754 ; NGR-21-002-224;
NGR-21-002-316)

The ionization states and spectra of 0.3 to 2.4 MeV/nuc He, C, O and Fe are measured in a survey of ten solar flare particle events. He(plus) is found to be present in all events, which indicates the common presence of energetic He(plus) in the source material from which solar particles are accelerated. The distribution functions of He(plus), He(plus plus) and heavier elements are represented by simple exponentials of the particle speed times its rigidity to a power n, where n is between 0 and 1, and equal e-folding values. Results are consistent with a model where ions are accelerated in the corona by multi-dimensional shocks out of a population taken from both hot and cold coronal regions. D.L.G.

ON THE ANTICORRELATION BETWEEN THE HE/3//HE/4/ RATIO AND PROTON INTENSITY IN HE/3/ RICH FLARES
M. E. PESSES (Maryland, University, College Park, MD) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 171-174. refs
(Contract NAS5-20062)

A model is presented to explain the observed anticorrelation between the size of the He(3)/He(4) abundance ratio at not less than about 10 MeV/nuc and the peak intensity of about 10 MeV protons in the He(3) rich events. The anticorrelation is shown to be a natural consequence of producing abundance enhancement by a two step acceleration process, where He(3) is preaccelerated with respect to He(4) prior to the main ion acceleration phase, which has an effective injection cutoff varying from flare to flare. D.L.G.

A82-30304

REGIONAL GEOLOGICAL, TECTONIC AND GEOPHYSICAL FEATURES OF NORDLAND, NORWAY

R. H. GABRIELSEN, I. B. RAMBERG (Oslo, Universitetet, Oslo, Norway), M. B. E. MORK (Universitets Minelarogisk Geologiske Museum, Oslo, Norway), and B. TVEITEN (BP Petroleum Development of Norway, A/S, Stavanger, Norway) Earth Evolution Sciences, vol. 1, Mar. 1981, p. 14-26. Research supported by the Norges Almenvitenskapelige Forskningsrad, Committee for Geophysics and Geology and Norges Teknisk-Naturvitenskapelige Forskningsrad refs
(Contract NTNF PROJECT 18108075)

Foliation and lineament patterns from Landsat imagery, gravity and magnetic data mapping of Nordland, Norway shows a high degree of correlation with known tectonostratigraphic units and suggests other, previously unidentified tectonic units. Attention is given to regionally important lineament systems, one striking approximately ENE-WSW, and a younger one N-S. It is indicated by the large-scale residual gravity lows along the Norway-Sweden border, which are associated with basement domes, and by magnetic data and lineament patterns, that the eastern basement windows represent large-scale culminations. By contrast, the western domes represent smaller, perhaps granitic cores of recumbent fold nappes. A positive correlation is found between the seismotectonic coastal zones of Nordland and the area's Bouguer gravity anomally maximum gradient. O.C.

A82-30305

SATELLITE IMAGE INTERPRETATION OF THE EASTERN CALEDONIAN PART OF THE BLUE ROAD GEOTRAVERSE AND ITS GEOLOGICAL IMPLICATIONS /NORDLAND, VASTERBOTTEN, SCANDINAVIA/

R. GREILING (Mainz, Universitaet, Mainz, West Germany) Earth Evolution Sciences, vol. 1, Mar. 1981, p. 27-30. refs

An 80% coincidence of known geological features with the lineaments interpreted in the satellite image presented by Ehrenborg (1977) is found through the quantitative study of Landsat interpretations for the case of a Precambrian area in southeastern Sweden. Because of its probable connection with the quaternary glacial erosion, the distribution of joints and faults may be interpreted as (1) E-W-striking lineaments locally correlated with faults affecting Caledonian low-angle thrusts and folliations, (2) NW-SE lineaments locally correlated with leucocratic dikes, and (3) NNW-SSW lineaments generally parallel to the present coast which, by contrast to the region farther west, is of minor importance. O.C.

MAGSAT SCALAR ANOMALY DISTRIBUTION - THE GLOBAL PERSPECTIVE

H. FREY (NASA, Goddard Space Flight Center, Geophysics Branch, Greenbelt, MD) Geophysical Research Letters, vol. 9, Apr. 1982, p. 277-280. refs

It is established that geographic coincidences exist between high-altitude Magsat scalar anomalies and major geologic and tectonic structures, with oceanic abyssal plains overlain by negative anomalies agreeing well in spatial extent and position and submarine platforms lying beneath positive scalar anomalies. In addition, geographic coincidence is found in the continents between many high-latitude positive anomalies and shields and cratons in North America, Eurasia and Australia. While these correlations are qualitative, they serve to identify regions for detailed study. The global distribution of anomalies provides a basis for comparative study which will be enhanced when reduced-to-pole versions of the Magsat data become available. O.C.

SPECTROSCOPIC REMOTE SENSING FOR GEOLOGICAL APPLICATIONS

A. F. H. GOETZ (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) In: Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 17-21. refs
(Contract NAS7-100)

Remote sensing is being used with increasing frequency in the development of geologic maps and in the exploration process. Spectral data from airborne and spaceborne multispectral scanners provide information on rock type and vegetation stress, important in geologic applications. Emphasis is now being placed on direct identification of materials rather than discrimination among geologic units. To do this, higher spectral resolution systems with wider spectral coverage than currently available are required. Imaging spectroscopy in the 0.4 - 14 microns region appears to be the answer. POSSIBLE FAULT DETECTION IN COTTONBALL BASIN, CALIFORNIA AN APPLICATION OF RADAR REMOTE SENSING

G. L. BERLIN, G. G. SCHABER, and K. C. HORSTMAN (U.S. Geological Survey, Flagstaff, AZ) Remote Sensing of Environment, vol. 10, Aug. 1980, p. 33-42. refs

An analysis of a 3-cm wavelength radar image of Cottonball Basin in Death Valley National Monument has revealed the existence of two suspect fault traces in evaporite deposits that are less than 2000-yr old. The traces are well defined on the image because the radar system was able to differentiate surface roughness variations at the centimeter scale. The features are not recognizable on data sets recorded ,in the visible and near-infrared spectral bands. Results indicate the potential of radar images as a tool to help locate recent breaks along a fault when the disturbed zone is represented by a somewhat rougher surface than is found in immediately adjacent areas. AEROGEOPHYSICAL METHODS OF FINDING URANIUM DEPOSITS [AEROGEOFIZICHESKIE METODY PROGNOZIROVANIIA MESTOROZHDENII URANA]

A. I. KRASNOV, E. B. VYSOKOOSTROVSKAIA, V. A. SMIRNOV, IU. B. NOVIKOV, E. I. ZUBOV, G. B. MUKAREVA, L. V. DIORDIENKO, and V. G. ZAITSEV Moscow, Atomizdat, 1980. 132 p. In Russian. refs

Geophysical prospecting for uranium with the aid of a large-scale, comprehensive gamma-spectrometric, aeromagnetic, and aeroelectric survey is considered. The development in the USSR and in other countries of aerogeophysical prospecting for uranium is surveyed. Features of geophysical fields that are characteristic of regions containing endogenous and exogenous deposits of uranium are analyzed. Direct and indirect radiogeochemical, magnetogeophysical, and electrogeophysical indicators of uranium-bearing structures are described. The methods described here rely on a comprehensive interpretation of aerogeophysical, geological, and other types of data. C.R.

LANDSAT IN THE SEARCH FOR APPALACHIAN HYDROCARBONS
H. W. BLODGET (NASA, Goddard Space Flight Center, Eastern Regional Remote Sensing Applications Center, Greenbelt, MD) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 259-262. refs

A study has been conducted to determine the applicability of enhanced Landsat imagery for oil and gas exploration in Appalachia. Attention was given to the feasibility to employ lineaments identified on Landsat imagery as a tool in petroleum exploration. Lineaments, as defined in this connection, are linear or sublinear traces seen on Landsat imagery. They frequently reflect subsurface geological structures. The investigation was conducted in two stages. The first was designed to identify the specific Landsat imagery enhancement best suited for displaying lineaments. The second stage consisted of plotting lineaments and conducting an analysis of the lineament trends with regard to both local geological structure and regional tectonics. A close relationship was observed between lineaments identified on Landsat imagery and known oil and gas reservoirs. This result suggests that lineaments can be related to the structural control of oil and gas reservoirs throughout Appalachia. G.R.

INFLUENCE OF CO2 ON MELTING OF MODEL GRANULITE FACIES ASSEMBLAGES - A MODEL FOR THE GENESIS OF CHARNOCKITES
R. F. WENDLANDT (Lunar and Planetary Institute, Houston, TX) American Mineralogist, vol. 66, 1981, 1164-1174. refs
(Contract NASW-3389)

A model is described for the melting of a simple granulite assemblage, in the presence of CO2-rich fluid phases, which can occur between 750 and 1000 C at crustal pressures and is therefore within the range estimated for such regional metamorphism as that of the Adirondacks. For melting which occurs at about 750 C in the presence of both H2O and CO2, pressures corresponding to the deep crust are required to generate a melt enriched in pyroxene and feldspar components, while melting the precense of pure CO2 at about 1000 C generates analogous melt compositions at lower pressures. These experimental reactions are in keeping with observations constraining charnockite occurrences: (1) pressure and temperature constraints; (2) mineralogical constraints; and (3) constraints on the compositions of volatiles associated with peak conditions of charnockite formation. O.C.

SIGNIFICANCE OF TECTONICS IN LINEAR FEATURE DETECTION AND INTERPRETATION ON SATELLITE IMAGES
F. CSILLAG (Eotvos Lorand Tudomanyegyetem, Budapest, Hungary) Remote Sensing of Environment, vol. 12, July 1982, p. 235-245. refs

There are two main concepts of linear feature evaluation based on satellite images. One puts emphasis on finding equivalence between the image and the field data, in the other, the basic aim is to correlate them after their more or less separate interpretation. A comparative study of the two methods has been carried out on a test field in Southwest Hungary using several kinds of geological and geophysical data as reference. Combining the statistical and deterministic approach a block-faulting mechanism can be recognized and described with ENE-WSW main axis. Correlation of satellite and reference data proved the tectonic difference of the northern and southern parts of the test field. This led to the conclusion that one can derive textural information on tectonics from a Landsat image concerning especially short lines. This implies that not only the present surface expression of faults and tectonics is detectable but the determination of the latest tectonically active surface is also possible. (Author)

(E82-10190; NASA-CR-168618; NAS 1.26:168618; REPT-80-SGN-848-GEO-REPT-3) Avail: NTIS HC A05/MF A01 CSCL 08G

Thermal zones delimited on HCMM images, by visual interpretation only, were correlated with geological units and carbonated rocks, granitic, and volcanic rocks were individualized rock signature is evolutive parameter and some distinctions were made by addition of day, night and seasonal thermal image interpretation. This analysis also demonstrated that forest cover does not mask the underlying rocks thermal signature. Thermal linears are associated with known tectonics but the observed thermal variations from day to night and from one to another represent a promising concept to be studied in function of neotectonics and hydrogeology. The thermal anomalies discovered represent a potential interest which is to be evaluated. Significant results were obtained in the Mont Dore area and additional geological targets were defined in the Paris Basin and the Montmarault granite. Author

OVERSEAS GEOLOGY AND MINERAL RESOURCES NUMBER 56: A GEOLOGICAL INTERPRETATION OF LANDSAT IMAGERY AND AIR PHOTOGRAPHY OF BOTSWANA
D. I. J. MALLICK, F. HABGOOD, and A. C. SKINNER 1981 41 p refs Original contains color maps Original contains color illustrations
(OGMR-56; ISBN-0-11-884138-6) Avail: NTIS HC A03/MF A01; HMSO 5

A 1:1 million geological map compiled from LANDSAT and air photography of Botswana and border areas is presented. The distribution of 22 geological units of Karoo and Precambrian age is shown together with the post-Karoo deposits, differentiated into 7 units, based on geomorphological criteria. The data help distinguish volcanics of the Kanye Group from those of the Ventersdorp Group, and the Transvaal Supergroup from those of the Waterberg Group at localities far from their better exposed outcrop areas in the southeast of the country. Eolian, lacustrine and alluvial components of Kalahari desert superficial deposits are differentiated. The fracture and lineament pattern is only partly evident from the photographs. Author (ESA)

CHARACTERIZATION OF THE STRUCTURE AND TECTONIC OF SOUTH AMERICA Quarterly Report, 1 Mar. - 30 Jun. 1981
G. R. KELLER and E. G. LIDIAK, Principal Investigators 30 Jun. 1981 4 p ERTS
(Contract NAS5-26326)
(E82-10196; NASA-CR-168623; NAS 1.26:168623) Avail: NTIS HC A02/MF A01 CSCL 08G

Geologic studies of the South American plate were undertaken. The Guayana shield is reasonably well studied, and although data are sparce, the central Brazilian shield appears similar. Both the Amazon and Parnaiba basins seem to be related to an aulocogen structure. The collection of crustal structure information and the generation of measurement of surface wave dispersion in the shield areascontinues. Long period seismograms are digitized and analyzed. Exisiting crusted and upper mantle studies were indexed. Both MAGSAT scaler and vector magnetic anomaly data were used with regional gravity anomaly data to investigate the regional tectonic features of the South American plate. E.A.K.

APPLICATION OF HCMM DATA TO REGIONAL GEOLOGIC ANALYSIS FOR MINERAL AND ENERGY RESOURCE EVALUATION Progress Report, Sep. - Nov. 1981
K. WATSON, Principal Investigator and S. H. MILLER Nov. 1981 4 p Sponsored by NASA HCMM
(E82-10153; NASA-CR-168538; NAS 1.26:168538) Avail: NTIS HC A02/MF A01 CSCL 08G

A more accurate algorithm was developed to compute thermal inertia from temperature difference and albedo information. The error of this algorithm is about 1/3 of the measurement error in HCMM as opposed to the current algorithm which can have an error 5 times larger. A northeast trending lineament was discovered in southewestern Arizona on enhanced thermal inertia images. Author

APPLICATION OF HCMM DATA TO REGIONAL GEOLOGIC ANALYSIS FOR MINERAL AND ENERGY RESOURCE EVALUATION Progress Report, Mar. - May 1981
K. WATSON, Principal Investigator and S. H. MILLER May 1981 4 p Sponsored by NASA HCMM
(E82-10243; NASA-CR-168824; NAS 1.26:168824) Avail: NTIS HC A02/MF A01 CSCL 08G

The effects of topographic elevation and slope on thermal images were examined using representative field obstructions of the solar and sky radiation and a simple linearized thermal model. The forms are easily adapted for analysis of HCMM images using the DMA digital terrain data. From a representative set of field observations, it was found that flux variations with elevation can cause changes in the mean diurnal temperature gradient from -4 deg to -14 deg per km evaluated at 2000 m. Changes in the temperature difference gradient of 1 to 2 C per km are also produced which is equivalent to an effective thermal inertia gradient of 100 W s to the 1/2 power/sq m K/1 per km. Exposed bedrock on topographic ridges will appear to have a lower thermal inertia due to the additional effect. E.A.K.

THE MINERALOGY OF GLOBAL MAGNETIC ANOMALIES Progress Report, Sep. 1981 - Jan. 1982
S. E. HAGGERTY, Principal Investigator 15 Feb. 1982 31 p refs ERTS
(Contract NAS5-26414)
(E82-10305; NASA-CR-168880; NAS 1.26:168880) Avail: NTIS HC A03/MF A01 CSCL 08G

Problems with the Curie balance, which severely hindered the acquisition of data, were rectified. Chemical analytical activities are proceeding satisfactorily. The magnetization characteristics of metamorphic suites were analyzed and susceptibility data for a wide range of metamorphic and igneous rocks. These rock magnetic signatures are discussed as well as the relationships between geology, gravity and MAGSAT anomalies of West Africa. A.R.H.

USE OF MAGSAT ANOMALY DATA FOR CRUSTAL STRUCTURE AND MINERAL RESOURCES IN THE US MIDCONTINENT Quarterly Report, period ending 31 Dec. 1981
R. S. CARMICHAEL, Principal Investigator 31 Dec. 1981 31 p refs ERTS
(Contract NAS5-26425)
(E82-10323; NASA-CR-168902; NAS 1.26:168902; QR-4) Avail: NTIS HC A03/MF A01 CSCL 08G

The analysis and preliminary interpretation of investigator-B MAGSAT data are addressed. The data processing included: (1) removal of spurious data points; (2) statistical smoothing along individual data tracks, to reduce the effect of geomagnetic transient disturbances; (3) comparison of data profiles spatially coincident in track location but acquired at different times; (4) reduction of data by weighted averaging to a grid with 1 deg xl deg latitude/longitude spacing, and with elevations interpolated and weighted to a common datum of 400 km; (5) wavelength filtering; and (6) reduction of the anomaly map to the magnetic pole. Agreement was found between a magnitude data anomaly map and a reduce-to-the-pole map supporting the general assumption that, on a large scale (long wavelength), it is induced crustal magnetization which is responsible for major anamalies. Anomalous features are identified and explanations are suggested with regard to crustal structure, petrologic characteristics, and Curie temperature isotherms. M.G.

THE INFLUENCE OF AUTOCORRELATION IN SIGNATURE EXTRACTION: AN EXAMPLE FROM A GEOBOTANICAL INVESTIGATION OF COTTER BASIN, MONTANA
M. L. LABOVITZ and E. J. MASUOKA, Principal Investigators Dec. 1981 28 p refs Submitted for publication ERTS
(E82-10341; NASA-TM-83871; NAS 1.15:83871) Avail: NTIS HC A03/MF A01 CSCL 05B

The presence of positive serial correlation (autocorrelation) in remotely sensed data results in an underestimate of the variance-covariance matrix when calculated using contiguous pixels. This underestimate produces an inflation in F statistics. For a set of Thematic Mapper Simulator data (TMS), used to test the ability to discriminate a known geobotanical anomaly from its background, the inflation in F statistics related to serial correlation is between 7 and 70 times. This means that significance tests of means of the spectral bands initially appear to suggest that the anomalous site is very different in spectral reflectance and emittance from its background sites. However, this difference often disappears and is always dramatically reduced when compared to frequency distributions of test statistics produced by the comparison of simulated training sets possessing equal means, but which are composed of autocorrelated observations. AIRBORNE GAMMA-RAY SPECTROMETER AND MAGNETOMETER SURVEY: SIOUX FALLS QUADRANGLE, SOUTH DAKOTA, VOLUME 1 Final Report

May 1981 99 p refs Sponsored in part by Bendix Field Engineering Corp. 2 Vol.
(Contract DE-AC13-76GJ-01664)
(DE82-005533; GJBX-389-81-VOL-1) Avail: NTIS HC A05/MF A01

Computer printer maps of the magnetic total intensity and the six radiometric parameters were prepared in addition to the radiometric anomaly maps for this area. The magnetic total intensity map displays a rather subdued response pattern of broad low amplitude anomalies over much of the area with an average magnetic intensity of approximately 58,900 gammas. The radiometric response over much of the area is relatively low. Equivalent concentrations of uranium, thorium and potassium only rarely exceed 3.2 ppM, 7.5 ppM and 1.4% respectively. A number of these zones of increased concentrations show corresponding anomalous responses on the uranium/potassium and/or uranium/thorium pseudo-contour maps. Based on this set of computer printer maps alone however, it is, at times, difficult to discern the contribution of coinciding local decreases in the potassium and thorium parameters to these ratio anomalies. Based on the criteria stated in the general section on interpretation, a total of seven uranium and seven thorium anomalies were outlined on the interpretation map. DOE

EVALUATION AND COMBINED GEOPHYSICAL INTERPRETATIONS OF NURE AND RELATED GEOSCIENCE DATA IN THE VAN HORN, PECOS, MARFA, FORT STOCKTON, PRESIDIDO, AND EMORY PEAK QUADRANGLES, TEXAS, VOLUME 1 Final Report

G. R. KELLER, W. J. HINZE, C. L. V. AIKEN, P. C. GOODELL, R. F. ROY, and N. E. PINGITORE Sep. 1981 451 p refs 2 Vol.
(Contract DE-AC13-76GJ-01664)
(DE82-005554; GJBX-365-81) Avail: NTIS HC A20/MF A01

The six Trans-Pecos Texas quadrangles (Van Horn, Pecos, Marfa, Port Stockton, Presidio, and Emory Park) were surveyed. The aeromagnetic gravity and geochemical data, their processing, and their analysis are discussed. The geologic history and setting of the Trans-Pecos are discussed along with the uranium potential of the region. Uranium anomalies and occurrences are present in the study area, and information is presented on 33 drill holes into these targets. A folio of maps reduced to a scale of 1:500,000. Geologic maps for each of the six quadrangles are included and the geophysical maps have been prepared to be overlays for the geologic maps. Residual aeromagnetic anomaly, complete Bougner gravity anomaly, flight line index, gravity station index, and anomaly interpretative maps were prepared for each quadrangle. A large suite of digitally processed maps of gravity and aeromagnetic are included. DOE

LABORATORY STUDIES OF ACTINIDE METAL-SILICATE FRACTIONATION
J. H. JONES and D. S. BURNETT (California Institute of Technology, Pasadena, CA) In: Lunar and Planetary Science Conference, 11th, Houston, TX, March 17-21, 1980, Proceedings. Volume 2. New York, Pergamon Press, 1980, p. 995-1001. refs
(Contract NSG-7202)

Actinide and Sm partition coefficients between silicate melt and several metallic phases have been measured. Under reducing conditions Si, Th, U and Pu can be reduced to metals from silicate melts and alloyed with a platinum-gold alloy. U and Pu enter a molten Pt-Si alloy with roughly equal affinity but U strongly partitions into the solid Pt. Th behaves qualitatively the same as Pu but is much less readily reduced than U, and Sm appears to remain unreduced. Experiments with Fe metal have shown that the partition coefficients of the actinides between Fe and silicate liquid are extremely low, suggesting a very low actinide concentration in planetary cores. Experiments show that platinum metals can efficiently fractionate actinides and fractionate actinides from lanthanides and this process may be relevant to the condensation behavior of these elements from the solar nebula. Pt-metal grains in Allende Ca-Al-rich inclusions appear to be U-poor, although the sub-class of Zr-bearing Pt metals may have high U contents. (Author)

FEATURES OF COSMIC RAY VARIATIONS DUE TO VARIATIONS IN THE TOTAL MAGNETIC FIELD OF THE SUN
A. N. CHARAKHCHIAN (Akademiia Nauk SSSR, Fizicheskii Institut, Moscow, USSR) and T. N. CHARAKHCHIAN (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 202-205. refs

The characteristics of the large-scale variations in cosmic ray intensity associated with variations in the total solar magnetic field are discussed. Particular attention is given to cosmic ray effects connected with solar magnetic field inversion and the presence in the stratosphere of short-range particles during periods of increasing total solar magnetic field, and to zonal cosmic ray modulation in the primary energy range 5-20 GeV which is due largely to magnetic field variations at the periphery of the heliosphere. The Seasat project, which demonstrated the feasibility of microwave oceanographic remote sensing, was sponsored by the National Aeronautics and Space Administration and managed by the Jet Propulsion Laboratory. The evaluation of the measurement system (elements of the satellite, the sensors, the data handling, and data processing subsystems) was a key activity of the Seasat project. This paper summarizes the primary achievements and highlights the generic limitations of the evaluation process. Other papers in this issue present details of the geophysical evaluation process carried out under the auspices of the Seasat project. (Author)

TIDAL AND GEODETIC OBSERVATIONS FOR THE SEASAT ALTIMETER CALIBRATION EXPERIMENT
J. M. DIAMANTE, B. C. DOUGLAS, D. L. PORTER, and R. P. MASTERSON, JR. (NOAA, National Ocean Survey, Rockville, MD) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3199-3206. refs

As part of the Seasat calibration activities of September and October 1978, a tide gage was installed by the National Ocean Survey at an open coastal location on Bermuda to provide instantaneous sea surface height determinations during Seasat overflights of the island. Because the tide gage was geodetically tied to the laser tracking station on Bermuda, the satellite's position relative to the sea surface could be determined independently for comparison with altimeter measurements. A root sum square error of 4.0 cm in the laser's vertical position determination, relative to the sea surface, has been estimated apart from possible errors arising from the present lack of precise information on the elevation of the Bermuda geoid. O.C.

AN EMPIRICAL DETERMINATION OF THE EFFECTS OF SEA STATE BIAS ON SEASAT ALTIMETRY

G. H. BORN, M. A. RICHARDS (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), and G. W. ROSBOROUGH (Texas, University, Austin, TX) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3221-3226. NASA-supported research. refs

A linear empirical model has been developed for the correction of sea state bias effects, in Seasat altimetry data altitude measurements, that are due to (1) electromagnetic bias caused by the fact that ocean wave troughs reflect the altimeter signal more strongly than the crests, shifting the apparent mean sea level toward the wave troughs, and (2) an independent instrument-related bias resulting from the inability of height corrections applied in the ground processor to compensate for simplifying assumptions made for the processor aboard Seasat. After applying appropriate corrections to the altimetry data, an empirical model for the sea state bias is obtained by differencing significant wave height and height measurements from coincident ground tracks. Height differences are minimized by solving for the coefficient of a linear relationship between height differences and wave height differences that minimize the height differences. In more than 50% of the 36 cases examined, 7% of the value of significant wave height should be subtracted for sea state bias correction. O.C.

SEA-STATE-RELATED ALTITUDE ERRORS IN THE SEASAT RADAR ALTIMETER

G. S. HAYNE and D. W. HANCOCK, III (NASA, Wallops Flight Center, Wallops Island, VA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3227-3231. refs

A significant waveheight-dependent bias is identified in Seasat-measured surface heights which cannot be neglected when using Seasat data at accuracies within 10 cm. Ten-second averages of the data from 63 waveform sampling rates in the Seasat radar altimeter were least squares fitted with a six-parameter model, the time-origin parameter of which provides a measure of the position of the actual mean radar waveform relative to the sampling rate and therefore provides altitude measurement corrections. Attention is given to actual altimeter point target response function, waveform sampler noise baseline, waveform sampler gain calibration, attitude angle and sea surface skewness, as effects not accounted for in Seasat altimeter measurements and standard data processing. O.C.

SEASAT ALTIMETER TIMING BIAS ESTIMATION

J. G. MARSH (NASA, Goddard Space Flight Center, Geodynamics Branch, Greenbelt, MD) and R. G. WILLIAMSON (EG & G Washington Analytical Services Center, Inc., Riverdale, MD) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3232-3238. refs

A technique developed for the solution of time lag bias based on the analysis of sea surface height discrepancies at ground track intersections, prompted by the presence of a time calibration bias in Seasat altimeter data that produced measurement errors in excess of 1 m, is shown to yield a separation of the dominant, once-per-revolution ephemeris error amounting to about 1.5 m rms from the timing error signature. The technique does not depend on precise geoid data, and in application to a global Seasat altimeter data set covering July 28-August 9, 1978, has yielded a time lag value of -81.0 + or - 2 msec. This corroborates the -79.4 msec revised value derived from a reexamination of internal instrument time delays. O.C.

EVALUATION OF THE SEASAT ALTIMETER TIME TAG BIAS

B. E. SCHUTZ, B. D. TAPLEY, and C. SHUM (Texas, University, Austin, TX) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3239-3245. refs

(Contract NOAA-MO-A01-78-00-4325; JPL-954703)

Two methods were used in analyses of Seasat altimeter data, aimed at the corroboration of an inherent altimeter microprocessor delay compensation value of -79.4 msec, which benefited from a global data distribution in the oceanic areas: (1) the crossover method, using altimeter data differenced at points where the Seasat ground track intersected with itself, and (2) the direct use of the altimeter data. Because the former method is independent of errors in the geoid model, it is considered the more reliable. For all crossover method results, the adopted value of -79.4 msec is within the bounds of the standard deviation associated with the estimates, of which -78.1 + or - 2.0 msec is considered the best representative. O.C.

WAVEHEIGHT AND WIND SPEED MEASUREMENTS FROM THE SEASAT RADAR ALTIMETER

L. S. FEDOR (NOAA, Wave Propagation Laboratory, Boulder, CO) and G. S. BROWN (Applied Science Associates, Inc., Apex, NC) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3254-3260. refs

(Contract NOAA-NA-79SAC00723)

A similarity to the results of earlier comparisons with the GEOS-3 radar altimeter data is noted, in the mean difference of -0.25 m/sec and standard deviation of 1.56 m/sec found upon comparison of Seasat radar altimeter-derived winds with buoy-recorded winds in the 1-10 m/sec range. It has therefore been demonstrated by means of two different radars and data sets that radar altimetry can provide accurate estimates of ocean surface wind speeds. Although the altimeter cannot provide the large-swath coverage provided by the Seasat scatterometer, its ability to produce accurate, simultaneous estimates of wind speed and waveheight may be important to future oceanographic research O.C.

SEASAT ALTIMETER DETERMINATION OF OCEAN CURRENT VARIABILITY

R. L. BERNSTEIN, R. H. WHRITNER (California, University, La Jolla, CA), and G. H. BORN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3261-3268. refs

(Contract NAS7-100)

An experiment conducted in the Kuroshio Current, east of Japan, has confirmed the ability of radar altimeters of precision on the order of 10 cm, such as that of the Seasat satellite, to measure the small oceanic height variations associated with geostrophic ocean currents. Changes in surface dynamic height were inferred from data gathered by air-expendable barithermographs, which had been dropped to coincide with the Seasat subtrack, for the periods between the flights of September 25 and October 5 and 13, 1978. The changes registered generally agreed to within + or - 10 cm of the height changes observed in the altimeter data. O.C.

THE SEASAT ALTIMETER MEAN SEA SURFACE MODEL
J. G. MARSH (NASA, Goddard Space Flight Center, Geodynamics Branch, Greenbelt, MD) and T. V. MARTIN (EG & G Washington Analytical Services Center, Inc., Riverdale, MD) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3269-3280. refs

Gridding techniques are used to combine an 18-day set of Seasat altimeter data and two precisely-computed Seasat ephemerides, in order to arrive at global contour maps of the mean sea surface topography. The altimeter data have an rms agreement of 111 cm with the SS3 mean sea surface computed by means of the PGS-S3 ephemerides, and of 70 cm with the SS4 mean surface derived from the PGS-S4 ephemerides. While comparisons with the GEM 10B 1 x 1 deg gravimetric geoid have yielded rms differences of 2.8 m, those with a global mean sea surface derived from GEOS 3 altimeter data show rms differences of 1.3 m and 1.1 m for the cases of the SS3 and SS4 surfaces, respectively. An SS4 mean sea surface topograph is featured among the study findings presented. Further improvements in the representation of mean sea surface topography are expected with the development of more accurate gravity models for orbit computation. O.C.

WENTZ (Remote Sensing Systems, Inc., Sausalito, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3297-3317. refs

A description is given of the algorithm used to convert Seasat-A satellite microwave scatterometer measurements of ocean normalized radar cross section to the neutral stability vector wind at 19.5 m height, as well as to compare these winds with high-quality surface observations. The wind vector algorithm used an empirical normalized radar cross section model function to describe the ocean normalized radar cross section's dependence on the 19.5-m neutral stability wind vector. In addition, two model functions were evaluated by means of an independent set of in situ surface wind observations from the Joint Air Sea Interaction experiment (JASIN). Better results were produced by these comparisons than the stipulated Seasat wind speed and direction accuracy specifications of + or - 2 m/sec and + or - 20 deg, respectively, over the 0-16 m/sec range of winds observed during JASIN. O.C.

THE RELATIONSHIP BETWEEN WIND VECTOR AND NORMALIZED RADAR CROSS SECTION USED TO DERIVE SEASAT-A SATELLITE SCATTEROMETER WINDS
L. C. SCHROEDER, W. L. JONES (NASA, Langley Research Center, Hampton, VA), D. H. BOGGS, I. M. HALBERSTAM (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), G. DOME (University of Kansas Center for Research, Inc., Lawrence, KS), W. J. PIERSON (New York, City University, New York, NY), and F. J. WENTZ (Remote Sensing Systems, Inc., Sausalito, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3318-3336. refs

The Seasat-A Satellite Scatterometer (SASS) ocean normalized radar cross section (NRCS) dependence on the 19.5-m neutral stability wind vector may be specified as a function of radar incidence angle, the angle between wind direction and radar azimuth, and the neutral stability wind speed expressed in m/sec at a height of 19.5 m. An account is given of the development of models both expressing this relationship and providing the basis of inversion of NRCS to SASS winds, from initially aircraft scatterometer measurement-based forms to three Seasat field-validation experiments which furnish model NRCS versus surface windspeed data for comparison with SASS data. O.C.

EVALUATION OF ATMOSPHERIC ATTENUATION FROM SMMR BRIGHTNESS TEMPERATURE FOR THE SEASAT SATELLITE SCATTEROMETER
R. K. MOORE, I. J. BIRRER (University of Kansas Center for Research, Inc., Lawrence, KS), E. M. BRACALENTE (NASA, Langley Research Center, Hampton, VA), G. J. DOME (Bell Telephone Laboratories, Inc., Holmdel, NJ), and F. J. WENTZ (Remote Sensing Systems, Inc., Sausalito, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3337-3354. refs

The effect of attenuation in precipitation regions of the sea, which must be considered in order to measure the radar backscatter from the ocean with sufficient accuracy to allow determination of the wind vector, can be ascertained from a knowledge of the brightness temperature observed by a microwave radiometer such as the Seasat multifrequency scanning radiometer. Two algorithms relating radiometric measurements and attenuation, and thereby correcting measured scattering coefficient values, were compared with wind vectors reported by surface observers and those determined by the Seasat scatterometer measurements with and without correction for atmospheric attenuation. Although the attenuation correction yields some improvements, it is constrained by both radiometer footprint differences and different scan patterns. O.C.

HAWKINS (NOAA, National Hurricane and Experimental Meteorology Laboratory, Bay Saint Louis, MS), J. E. OVERLAND (NOAA, Pacific Marine Environment Laboratory, Seattle, WA), W. J. PIERSON (City College, New York, NY), S. PETEHERYCH (Department of the Environment, Atmospheric Environment Service, Downsview, Ontario, Canada), J. C. WILKERSON (NOAA, Camp Springs, MD), P. M. WOICESHYN (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), and M. WURTELE (California, University, Los Angeles, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3355-3364. refs

During the 99 days of Seasat operation, two large-scale experiments were conducted which established the satellite sensors' wind measuring capabilities: (1) the Gulf of Alaska Experiment (GOASEX), and (2) the Joint Air Sea Interaction Experiment (JASIN), which unlike GOASEX was independent of the Seasat program and undertook comprehensive air and sea investigations which furnished excellent comparison data for Seasat. Qualitative comparison windfields were also provided by several storms. The point measurements in GOASEX and JASIN were averaged in conjunction with Seasat scatterometer regions and, on the basis of comparisons between several anemometers on buoys and meteorological ships and the calculation of various averaging times, a 20-min average yields a scatterometer scale windfield accuracy of up to + or 1 m/sec and + or - 10 deg in well-behaved windfields. O.C.

INTERCOMPARISON OF WIND SPEEDS INFERRED BY THE SASS, ALTIMETER, AND SMMR

F. J. WENTZ (Remote Sensing Systems, Inc., Sausalito, CA), V. J. CARDONE (Oceanweather, Inc., White Plains, NY), and L. S. FEDOR (NOAA, Wave Propagation Laboratory, Boulder, CO) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3378-3384. refs

(Contract NAS1-16032; NAS7-100)

The operational theory, control algorithms, and comparisons with surface-determined wind speeds for the scatterometer (SASS), altimeter (ALT), and passive microwave radiometer (SMMR) on board the Seasat satellite are presented. Radiative scattering combining specular reflections and Bragg resonance scattering are noted to occur at tilting waves and sea foam, two conditions highly correlated with wind speed. SASS scans swaths of 70, 200, and 700 km from nadir, the SMMR covers a 150 km strip. Normalized radar sections are derived from the SASS and ALT telemetry, and brightness temperature from the SMMR. ALT winds were found to be biased about 3 m/sec low, while intercomparison between the SMMR and SASS data showed a mean difference of 0.3 m/sec with a standard deviation from measured winds of 1.7 m/sec or less. The effects of land thermal emissions, rain, and sun glint are discussed, and good viewing conditions are concluded to result in 2 m/sec accuracy. M.S.K.

DESCRIPTION OF SEASAT RADIOMETER STATUS AND RESULTS

R. G. LIPES (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3385-3395. refs

(Contract NAS7-100)

Improved geophysical algorithms are shown to be able to determine sea surface temperature (SST) to an accuracy of 1 C (1 sigma) under favorable surface and atmospheric conditions over an SST range of 10-30 C. Under similar conditions, the radiometer wind retrievals track the scatterometer winds within a scatter of 2 m/s (1 sigma) over a wind speed range of 0-25 m/s. These conditions require that contamination from land, rain, sun glint, and radio frequency interference be avoided. What is more, water vapor determinations in the midlatitudes and in the tropical Pacific are found to agree with estimates of precipitable water from radiosondes to within 10%. C.R.

THE OBSERVATION OF OCEAN SURFACE PHENOMENA USING IMAGERY FROM THE SEASAT SYNTHETIC APERTURE RADAR - AN ASSESSMENT

J. F. VESECKY (Stanford University, Stanford, CA) and R. H. STEWART (California Institute of Technology, Jet Propulsion Laboratory, Pasadena; California, University, La Jolla, CA) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3397-3430. refs

(Contract N00014-75-C-0356; NOAA-MO-A01-78-00-4318)

The principles governing synthetic aperture radar (SAR) and its use on the Seasat spacecraft are reviewed. The way in which wind stress, surface currents, long gravity waves, and surface films modulate the scattering properties of resonant (approximately 30-cm-wavelength) waves is discussed, with particular emphasis placed on the mechanisms that could produce images of long gravity waves. Doppler effects by ocean motion are also described. Measurements of long (wavelength more than about 100 m) gravity waves made using Seasat SAR imagery are compared with surface measurements during several experiments. Combining these results, it is found that dominant wavelength and direction are measured by Seasat SAR within + or - 12% and + or - 15 deg, respectively. It is noted, however, that ocean waves are not always visible in SAR images, and detection criteria are discussed in terms of wave height, length, and direction. C.R.

SEASAT WIND AND WAVE OBSERVATIONS OF NORTHEAST PACIFIC HURRICANE IVA, AUGUST 13, 1978

F. I. GONZALEZ (NOAA, Pacific Marine Environmental Laboratory, Seattle, WA), T. W. THOMPSON (Science Applications, Inc., Planetary Science Institute, Pasadena, CA), W. E. BROWN, JR. (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA), and D. E. WEISSMAN (Hofstra University, Hempstead, NY) Journal of Geophysical Research, vol. 87, Apr. 30, 1982, p. 3431-3438. NOAA-supported research refs

(Contract NAS7-100)

The paper examines Seasat wind and wave observations collected in the eye of hurricane Iva on August 13, 1978 in the northeast Pacific. A maximum wind speed of 25-30 m/s is observed, along with a banana-shape high-wind-speed distribution. Two-dimensional Fourier transforms of selected SAR scenes show a dominant wavefield characterized by wavelengths of 166-211 m, with a fanlike distribution of propagation directions. A simple geometric model is proposed to explain the dominant wave field in terms of prior storm intensity and location, which is combined with the Ross parametric hurricane wave model and Seasat wind and wave data to estimate a value of 43 km for the effective radial distance from the storm center to the region of maximum winds. A STUDY OF THE EARTH'S RADIATION BUDGET USING A GENERAL CIRCULATION MODEL

J. M. SLINGO (Meteorological Office, Bracknell, Berks., England) Royal Meteorological Society, Quarterly Journal, vol. 108, Apr. 1982, p. 379-405. refs

A model clarifying the roles played by clouds and the surface in determining the seasonal variations in the radiation budget is described. The model employs an interactive radiation scheme with seasonally varying climatological sea surface temperatures, incoming solar radiation, and zonal mean climatological cloud amounts. Since its simulation of the various components of the earth's radiation compares favorably with results from satellites, its results are used in explaining certain aspects of the observed budgets. The model results are also used to estimate the earth's annual mean total energy budget and, in particular, the poleward flux of heat by the oceans. The oceanic heat flux implied by the model compares favorably with estimates based on observations, the main differences being at the equator and near the North Pole. C.R.

EMISSIVITY AND REFLECTANCE OF THE MODEL SEA SURFACE FOR THE USE OF AVHRR DATA OF NOAA SATELLITES

T. TAKASHIMA and Y. TAKAYAMA (Meteorological Research Institute, Tsukuba, Ibaraki, Japan) Papers in Meteorology and Geophysics, vol. 32, Dec. 1981, p. 267-274.

The emissivity and reflectance of the sea surface, modeled from AVHRR advanced radiometer sensing from the NOAA-6 satellites, are derived as a function of the incident and emergent directions of radiation. The sea surface is modeled numerically with slope components varying according to a gaussian distribution, including isotropy if independent of the wind direction, and anisotropy if dependent on the wind direction. The geometry of the slope with changing incident and reflecting angles is formulated in terms of spherical trigonometry. Treatment of the surface as a specular reflector is found to be acceptable except for visible light, where the reflection depends on the surface characteristics and a bivariate gaussian analysis is necessary. Additional influences due to oil slicks are considered, particularly for reflectance reduction. M.S.K.

LASER-INDUCED BIOLUMINESCENCE

G. D. HICKMAN (Applied Science Technology, Inc., Arlington, VA) and R. V. LYNCH, III (U.S. Navy, Naval Research Laboratory, Washington, DC) In: Los Alamos Conference on Optics '81, 2nd, Los Alamos, NM, April 7-10, 1981, Proceedings. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p 263-268. refs

(Contract N00014-80-C-0673)

A project has been initiated to determine the feasibility of developing a complete airborne remote sensing system for rapidly mapping high concentration patches of bioluminescent organisms in the world's oceans. Conceptually, this system would be composed of a laser illuminator to induce bioluminescence and a low light level image intensifier for detection of light. Initial laboratory measurements consisted of using a 2-J flash lamp pulsed optical dye laser to excite bioluminescence in the marine dinoflagellate Pyrocustis lunula at ambient temperature using Rhodamine 6G as the lasing dye (585 nm) and a laser pulse width of 1 microsec. After a latency period of 15-20 msec, the bioluminescence maximum occurred in the blue (480 nm is the wavelength maximum for most dinoflagellate bioluminescence) with the peaking occurring approximately 65 msec after the laser pulse. Planned experiments will investigate the effect of different excitation wavelengths and energies at various temperatures and salinities of the cultures. (Author)

A SHIP AND SATELLITE VIEW OF HYDROGRAPHIC FEATURES IN THE WESTERN GULF OF MEXICO

D. A. BROOKS (Texas A & M University, College Station, TX) and R. V. LEGECKIS (Texas A & M University, College Station, TX; NOAA National Earth Satellite Service, Washington, DC) Journal of Geophysical Research, vol. 87, May 20, 1982, p. 4195-4206. refs

(Contract NSF OCE-79-24606; NSF OCE-78-22481)

In April 1980, nearly synoptic hydrographic observations were obtained in the western Gulf of Mexico by satellite and ship. A meandering surface thermal front which turned northeastward from the Mexican coast near 23 deg N was prominent in the satellite infrared observations. The front separated a southern anticyclone and a northern cyclone, both of which had horizontal scales of several 100 km and were prominent in the subsurface hydrographic observations. The eastward geostrophic volume transport in the confluent leg of the two features was roughly equal to that of the Florida Current. A shallow layer of fresh, cool water from the Texas shelf region extended about 300 km seaward into the cyclone along the northern side of the front. Remnant Subtropical Underwater in the core of the April anticyclone indicates its origin in the eastern Gulf Loop Current. (Author)

ON THE SYNTHETIC APERTURE RADAR IMAGING OF OCEAN SURFACE WAVES

A. V. IVANOV (Akademiia Nauk SSSR, Institut Radiotekhniki i Elektroniki, Moscow, USSR) IEEE Journal of Oceanic Engineering, vol. OE-7, Apr. 1982, p. 96-103. refs

A process of synthetic aperture radar imaging of ocean surface waves is considered on the basis of the two-scale model of microwave scattering by a disturbed sea surface. Analytical expressions are obtained to relate characteristics of a large-scale wave image, averaged over an ensemble of realizations of the small-scale ripple, with the wave, radar, and viewing scheme as parameters. It is shown that the wave image would be defocused as an image of a target moving in the along-track direction with a speed equal to a half of the wave phase speed projection on the line of flight. The defocusing magnitude was measured experimentally for the ocean swells images, obtained with an airborne S-band radar, and the results are found to be in satisfactory agreement with the model prediction. (Author)

INFRARED SENSING OF SEA SURFACE TEMPERATURE FROM SPACE

M. SIDRAN (Bernard Baruch College, New York, NY) Remote Sensing of Environment, vol. 10, Sept. 1980, p. 101-114. refs

The retrieval of sea surface temperature information from the infrared signals received by remote sensing satellites is examined. Factors influencing the received signal are evaluated, including surface emissivity, spectral radiance, atmospheric transmittance, and sources of error in lengthy computer retrievals based on the integration of the radiative transfer equation related to imperfections in atmospheric transmittance models, uncertainties in the vertical profiles of atmospheric pressure, temperature and humidity profiles, temperature discontinuities at the air-sea interface, differences between surface and bulk water temperatures and the neglect of surface emissivity and reflectance are pointed out. The simple retrieval scheme of Prabhakara et al. (1974), which makes use of three spectral bands to achieve an rms error of + or - 1.1 K, is then reviewed, and a simplified version of this scheme based on only two bands is presented which reduces the rms error to + or - 1.0 K. A.L.W.

NEARSHORE CURRENT PATTERN OFF SOUTH TEXAS - AN INTERPRETATION FROM AERIAL PHOTOGRAPHS

R. E. HUNTER and G. W. HILL (U.S. Geological Survey, Menlo Park, CA) Remote Sensing of Environment, vol. 10, Sept. 1980, p. 115-134. refs

Turbidity patterns seen on aerial photographs of nearshore waters are analyzed to derive the current patterns in a 4-km wide zone along the south Texas coast. Series of color aerial photographs were taken vertically from an altitude of 3700 m on December 23, 1968, following the passage of a cold front accompanied by strong northwesterly to northeasterly winds. Examination of photographs taken from 6 to 80 min apart indicate the presence of southward currents nearly parallel to the shore, with velocities increasing from about 17 cm/sec off shore to about 40 cm/sec at the line of breaking waves. Rip-current plumes were observed to drift with the longshore current and be deformed by the horizontal shear. The turbidity by which these currents were traced originated in Aransas pass, a tidal inlet connecting several estuarine bays to the Gulf of Mexico, and a preceding ebb-tidal plume from the same inlet. A linear pattern of turbid and less turbid bands also suggests the development of Langmuir circulation with cell axes parallel to the shelf current. A.L.W.

MEASURING SEA SURFACE TEMPERATURE FROM SATELLITES - A GROUND TRUTH APPROACH
D. C. MCCONAGHY (NOAA, Southwest Fisheries Center, La Jolla, CA) Remote Sensing of Environment, vol. 10, Dec. 1980, p. 307-310.

Determining the correction for atmospheric attenuation is a major problem in processing thermal infrared digital data from very high resolution radiometers aboard NOAA Polar Orbiting Satellites. An empirical equation for estimating this correction is developed. The coefficients of the equation are determined by using regression techniques and comparing satellite observations to sea surface temperature measurements. Although there is not sufficient data to fully evaluate this procedure, initial satellite measurements are within 0.5 C of independent sea surface temperature measurements. (Author)

CHARACTERISTICS OF 13.9 GHZ RADAR SCATTERING FROM OIL FILMS ON THE SEA SURFACE
J. W. JOHNSON and W. F. CROSWELL (NASA, Langley Research Center, Hampton, VA) Radio Science, vol. 17, May-June 1982, p. 611-617. refs

Aircraft microwave scatterometer measurements are presented, which were made in 1979 as part of a project to study the response of a number of active and passive microwave and optical remote sensors to an oil-covered sea surface conducted by NASA Langley Research Center. A 13.9-GHz Doppler scatterometer with a fan beam antenna and coherent detection was used to measure radar backscatter as a function of incidence angle. The radar scattering signature of the clear surface and signatures of the surface covered with various crude oil films are compared. Reductions in Ku band microwave backscatter up to 14 dB are observed for both treated and untreated LaRosa and Murban crude oil films deposited on the sea surface. Maximum Ku band sensitivity to the effects of the oil in terms of differential scatter is observed in the 25-35 deg incidence angle region. D.L.G.

SATELLITE OBSERVATIONS OF SEA SURFACE TEMPERATURE AROUND THE BRITISH ISLES
R. W. SAUNDERS, N. R. WARD, C. F. ENGLAND, and G. E. HUNT (University College, London, England) American Meteorological Society, Bulletin, vol. 63, Mar. 1982, p. 267-272. Research supported by the European Space Agency, Natural Environmental Research Council, and Science and Engineering Research Council. refs

TIROS-N Advanced Very High Resolution Radiometer (AVHRR) imagery has been used to study the temperature structure of the sea surface around the British Isles. The satellite imagery from both TIROS-N, METEOSAT and conventional synoptic data are combined to obtain a calibration for both 11-micron infrared channels, which gave sea surface temperatures accurate to + or - 1 K. The changes in the sea surface temperature around the British Isles for July 12, 1979 are shown well by the satellite data. In particular, a study is made of an anomalously warm patch in the North Sea that appeared at local noon over an area where the surface winds were weak, inhibiting surface mixing. (Author)

A82-34219
COASTAL ENVIRONMENT CHANGE ANALYSIS BY LANDSAT MSS DATA
J.-K. HONG (Tokyo University of Agriculture and Technology, Tokyo, Japan) and J. IISAKA (IBM Japan, Ltd., Tokyo, Japan) Remote Sensing of Environment, vol. 12, May 1982, p. 107-116. refs

A case study of coastal environmental change is conducted using computer-assisted analysis of Landsat scenes for three different years. The Kanto area in Japan is divided into three study areas on the basis of social and geographical factors. Land use changes along the bay from November 26, 1972, to November 11, 1980, are studied and the results are interpreted by referring to the ground truth data. The results show a continuous decrease in the area of shallow water along the bay and changes in land use in the coastal areas. The changes are recognized as being closely related to the bay area changes; they are found to correspond well to differences in social developments in the study areas. Landsat data are thus shown to provide sufficient information on the environmental changes taking place. C.R.

ESTIMATION OF THE TEMPERATURE OF THE UPPER BOUNDARY OF CLOUD COVER OVER THE WORLD OCEAN [OTSENKA TEMPERATURY VERKHNEI GRANITSY OBLACHNOSTI NAD MIROVYM OKEANOM]
O. AVASTE, O. KIARNER, and S. KEEVALLIK (Akademiia Nauk Estonskoi SSR, Institut Astrofiziki i Fiziki Atmosfery, Tartu, Estonian SSR) Meteorologiia i Gidrologiia, June 1982, p. 54-59. In Russian. refs

The temperature of the upper boundary of cloud cover over the world ocean is estimated on the basis of cloud-amount estimates made by Avaste et al. (1981), climatological means of ocean surface temperature, and mean monthly values of outgoing radiation fluxes. Mean monthly upper-cloud-boundary temperatures over the world ocean are estimated for the 30 deg N to 30 deg S latitude belt. Data from the Nimbus-3 and NOAA meteorological satellites were used in the estimation. B.J.

INTERANNUAL VARIATIONS OF OUTGOING IR ASSOCIATED WITH TROPICAL CIRCULATION CHANGES DURING 1974-1978
B. LIEBMANN and D. L. HARTMANN (Washington, University, Seattle, WA) Journal of the Atmospheric Sciences, vol. 39, May 1982, p. 1153-1162. refs
(Contract NSF 78-07369; NSF 81-06099)

Interannual variability of outgoing IR in the tropical Pacific Ocean is studied using measurements derived from the NOAA scanning radiometer. In addition to the usual mean maps, seasonal anomaly maps are constructed from June, July, August 1974-December 1977, and January, February 1978. Time series representing the equatorial eastern Pacific sea-surface temperature (SST) anomalies and monthly anomalies at various locations are also plotted. During this period a warming event occurs, in which SSTs in the eastern Pacific rapidly become anomalously warm. Dramatic changes in outgoing IR occur simultaneously with this SST increase. The region of convergence over Indonesia shifts eastward and connects to a well-developed intertropical convergence zone (ITCZ). The South Pacific convergence zone (SPCZ) is also connected to the Indonesian convergence zone, but develops more slowly and does not reach its maximum strength until more than a year after the SST increases occur. By this time the ITCZ has returned to its prewarming state. Eastward movement of the SPCZ is also apparent. (Author)

ESTIMATION OF THE PRECIPITABLE WATER FROM THE IR CHANNEL OF THE GEOSTATIONARY SATELLITE

T. AOKI (Meteorological Satellite Center, Kiyose, Tokyo, Japan) and T. INOUE (Meteorological Research Institute, Yatabe, Ibaraki, Japan) Remote Sensing of Environment, vol. 12, July 1982, p. 219-228. refs

It has been shown that over the tropical oceans the total precipitable water can be estimated from the infrared radiometer data (10.5-12.5 microns) of the Geostationary Meteorological Satellite. The satellite derived values are in good agreement with the radiosonde data, with a 0.53 g/sq cm rms difference. The weekly mean distribution of the precipitable water over the tropical ocean of western Pacific has been obtained in both summer and winter seasons. The pattern of this distribution is in reasonable agreement with other authors and climatological data. (Author)

PULSE-TO-PULSE CORRELATION IN SATELLITE RADAR ALTIMETERS

E. J. WALSH (NASA, Wallops Flight Center, Wallops Island, VA) Radio Science, vol. 17, July-Aug. 1982, p. 786-800. refs

Pulse-to-pulse correlation in satellite radar altimeters is examined to determine if range jitter in future altimeters could be reduced by increasing the pulse repetition frequency (PRF). Data from the Skylab radar altimeter is analyzed and compared with rules of thumb and the results of a Monte Carlo simulation. Altimeter range tracker configurations are reviewed and a simple curve is developed for the PRF below which decorrelation is assured. An adaptive PRF for future altimeters is recommended to conserve mission power while optimizing data collection during high-sea states. (Author)

A QUANTITATIVE MULTISPECTRAL ANALYSIS SYSTEM FOR AERIAL PHOTOGRAPHS APPLIED TO COASTAL PLANNING

C. VALERIO (Aix-en-Provence, Centre d'Etudes Techniques de l'Equipement, Les Milles, Bouches-du-Rhone, France) and A. LLEBARIA (CNRS, Laboratoire d'Astronomie Spatiale, Marseille, France) International Journal of Remote Sensing, vol. 3, Apr.-June 1982, p. 181-197. refs

A system that may be used to study the dispersion of effluents in the sea either by means of their color or by using a fluorescent tracer, rhodamine B, is described, and its use is illustrated with the study of the dispersion over one day of a release of rhodamine in seawater. The underlying principle is the adjustment of the data acquisition device to the optical properties of the phenomenon being studied, so that the signal-to-noise ratio is optimized. A very accurate digitizing microdensitometer is used, and the data processing system is adapted to allow for correction of radiometric, spatial, and temporal variations. A simple mathematical representation of the interaction of sunlight with the environments encountered before reaching the negative is employed. An experimental procedure that eliminates the need for sampling from boats is used to follow the evolution of the plume, giving maps showing quantity of rhodamine to an accuracy of about five percent. ANALYSIS OF OCEAN COLOR SCANNER DATA FROM THE SUPERFLUX III EXPERIMENT

C. W. OHLHORST Mar. 1982 30 p refs
(NASA-TM-83290; NAS 1.15:83290) Avail: NTIS HC A03/MF A01 CSCL 08J

The scanner collected data on October 15, 20, and 22, 1980. Single-channel gray-scale data products generated 5 minutes after the scanner were collected and showed details of the Chesapeake plume structure, suggesting that this quick-look capability could have potential use for experiments in real time. The Chesapeake Bay plume extended offshore about 5 nautical miles on October 15, and 7 nautical miles on October 20. Using the October 15 1980, data, a correlation coefficient of r = 0.889 was obtained between chlorophyll 'A' and the ratio of band 7 (664-684 nanometers) to band 9 (746-766 nanometers). This ratio was then used to calculate the average surface chlorophyll 'A' concentration of the water flowing out of the Chesapeak Bay. A ratio from the Ocean Color Scanner bands was created to simulate the ratio that the Multichannel Ocean Color Sensor uses to calculate chlorophyll A concentrations. Using the October 15, 1980, data set, this ratio has a correlation coefficient of r = -0.739 with the log of the chlorophyll 'A' and the ratio of band 2 minus band 4 to band 2 plus band 4 of the Ocean Color Scanner. No correlation is found between the Ocean Color Scanner data and total suspended solid measurements made on October 15, 1980. T.M.

MEAN SEA-LEVEL PRESSURE IN THE SOUTHERN HEMISPHERE DURING THE FGGE PERIOD

W. L. PHYSICK and G. B. TUCKER *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 5 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

Drifting buoy recordings of mean sea level pressure (MSLP) are assessed as a means for investigating climate. Data from FGGE buoys were compared to long term MSLP's computed from daily numerical analyses and MSLP's from nine weather stations. Pressures observed in high latitude oceans during FGGE are lower than average for every month. The maximum difference is 12 mb. The MSLP is significantly different from normal. Mean zonal winds at 500 mb are significantly stronger by up to 50%. Buoys are useful data sources, but because the data is anomalous, they should not be used as reference points. Author (ESA)

REPRESENTATIVENESS OF CLOUD MOTION WINDS DEDUCED FROM GOES INDIAN OCEAN SATELLITE IMAGERY FOR THE DESCRIPTION OF THE INDIAN SUMMER MONSOON

M. DESBOIS *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 5 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

A technique which extracts wind fields from cloud motions is described and data thus produced are compared with cloud winds extracted by standard methods, dropsondes and balloon winds of

the BALSAMINE experiment. A set of successive pictures is presented in loops. Each picture can be moved relative to the others. Pictures are aligned using landmarks and cloud motions are measured by moving the pictures so that the observed cloud appears motionless during the loop. The relative displacement of the pictures and the location of the cloud elements are recorded and the results are processed on a computer that plots them on a map. It takes 4 hr to obtain a field. Results compare well with other methods and indicate that low cloud tracers follow the wind like constant level balloons. Over the Indian Ocean low cloud winds are representative of the 900-850 mb layer. Cloud winds are advocated as a tool for investigating monsoons.

SHORT TERM INFLUENCE RADIUS OF MONSOONAL OVERTURNINGS
J. PAEGLE (Utah Univ.) *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 9 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

The FGGE 3 b analyses and NOAA satellite data are used to delineate periods of intense convective activity over the central and western Pacific Ocean. For periods of stronger convection, the transient kinetic energy is relatively stronger over the deep tropics and into the subtropics than for times of less active tropical overturnings. Regions which are predominantly convective correspond to areas where the balance equation is nonelliptic. For these areas only steady states which are strongly divergent and with small or vanishing absolute vorticity are possible. Correlations of upper level outflows with wind components suggest substantial influence of the tropics upon the subtropics in time scales of 3 days. The need to include tropical processes in numerical weather prediction for tropical and subtropical numerical weather prediction is shown. Author (ESA)

IMPACT OF ADDITIONAL SUMMER MONEX WIND DATA ON THE PREDICTION OF MONSOON DEPRESSIONS DURING JUNE - AUGUST 1979 WITH TWO VERSIONS OF PRIMITIVE EQUATION (PE) BAROTROPIC MODEL
D. R. SIKKA, S. SINHA, S. S. SINGH, P. L. KULKANNI, and A. A. KULKARNI *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 4 p Apr. 1981 refs Sponsored in part by Colorado State Univ.
Avail: NTIS MF A01; HC WMO

The reliability of barotropic prediction and the influence of MONEX data was investigated. Streamlines and isotachs data for 700 mb are analyzed using (1) regular weather station observations and (2) additional data from Monex platforms. Two versions of the P.E. barotropic model, which differ only in the dynamic initialization procedure, are used and it is found that they perform equally well. They perform best on those structures in which the easterly flow is of comparable strength to monsoon westerlies at 700 mb. The impact of additional data is not positive consistently because the easterlies around the depression are weaker than westerlies and the additional data are better defined the westerly maxima. Westward motion of monsoon depression is linked with the convergence ahead of the system and the preferential convection in the forward sector. It is concluded that the P.E. barotropic model is not the best one to study the impact of additional data. Author (ESA)

MONEX OCEANOGRAPHIC OBSERVATIONS ALONG THE EAST AFRICAN COAST
O. B. BROWN and F. SCHOTT *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 16 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

Ship, buoy, and satellite current, temperature and air pressure data were used in order to study the Somali current. Wind field development, near surface circulation and upwelling were noted. Temperature, salinity, and potential density were recorded. The salinity profiles show several layers which deviate by more than 0.1 ppt from the mean. The density profile is smooth. So-called anomalous flow and expected flow often occur in the same year. Results suggest a mesoscale ocean-atmosphere interaction driven by the large horizontal difference in ocean surface temperature along the East African coast. Author (ESA)

ON THE SPACE-TIME VARIABILITY OF OCEAN SURFACE MIXED LAYER CHARACTERISTICS OF CENTRAL AND EASTERN ARABIAN SEA DURING MONSOON-77
R. R. RAO, P. G. K. MURTY, M. G. JOSEPH, and K. V. S. RAMAN *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 8 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

Surface mixed layer deepening and cooling of the Arabian Sea, which occurs in a nonhomogeneous manner during the monsoon season, is described. Ship polygons collected data on mixed layer (MLD) characteristics. Average MLD and vertical temperature gradient below MLD were recorded spatially and temporally. Deepening and cooling rates are higher over the central Arabian Sea than over the eastern Arabian Sea. In the central Arabian sea, deepening is greatest at the northern end. In the eastern Arabian Sea the layer deepening is higher at the southern location. The observed deepening shows good agreement with the computed layer depth, considering convective turnover caused by surface cooling. However, wind induced mixing contributes to the observed layer depth more in Phase-1U than Phase-2U. Vertical flow at the base of the mixed layer is upward, causing entrainment of colder waters from the upper thermocline and leading to mixed layer deepening and cooling. Author (ESA)

ESTIMATES OF SEA SURFACE STRESS FOR SUMMER MONEX FROM CLOUD MOTIONS
B. B. HINTON and D. P. WYLIE *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 5 p Apr. 1981 refs
(Contract NSF ATM-79-13097)
Avail: NTIS MF A01; HC WMO

Numerical modeling of surface wind stress is described. Satellite winds, cloud motions and monthly ship data are analyzed. Cloud motion speed is plotted as a function of the speed measured by a collocated ship. A regression line extrapolates speed from cloud to ship level. Regression relations are exploited for direction changes, e.g. veering. Cloud and ship data are merged in order to produce daily stress maps. Results agree with observed published data. The method is accurate over a wide area, at a 2 deg or more resolution, for several days. Cross correlations indicate that gridded cloud motion measurements error characteristics are compatable with ship wind measurements. Author (ESA)

THE ONSET OF THE AUSTRALIAN NORTHWEST MONSOON DURING WINTER MONEX: BROADSCALE FLOW REVEALED BY AN OBJECTIVE ANALYSIS SCHEME
B. J. MCAVANEY, N. E. DAVIDSON, and J. L. MCBRIDE *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 5 p Apr. 1981
Avail: NTIS MF A01; HC WMO

The structure and time changes of the seasonal movement of the equatorial trough were studied using an univariate, three-dimensional optimum interpolation objective analysis scheme. Wind field and surface pressure are analyzed. Analyses are cycled so that the analysis from 12 hr previous is used as the first guess field. Ships, aircraft, land stations, ocean platforms, satellite and archive data are analyzed. The monsoon onset is a large scale event (10 deg latitude by 30 deg longitude). It is not preceeded by a similar change in the Northern Hemisphere. Forcing comes from changes in the Southern Hemisphere subtropical circulation. These changes are well simulated by numerical prediction models on the 3 to 4 day time scale. Author (ESA)

MARINE BOUNDARY LAYER WIND STRUCTURE OVER THE BAY OF BENGAL DURING MONEX-79

S. SETHURAMAN *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 7 p Apr. 1981 refs Sponsored by NSF
Avail: NTIS MF A01; HC WMO

The role of the atmospheric boundary layer in monsoon formation was investigated through a micrometeorological tower which observed turbulent fluxes of heat and momentum over the ocean, a weather station that continuously recorded mean parameters, and pilot balloon observations to a height of 1 km. Wind profiles and surface/layer fluxes of momentum and heat indicate a change in the direction of the heat flux (in a vertical plane). Surface heat flux is upward with small values for cases with large downward heat fluxes in the upper layers. This occurs when the monsoon trough is far northward causing a break in the monsoon. When the trough moves to its normal position, there is a strong convective boundary layer over the Bay of Bengal. Author (ESA)

ESTIMATES OF THE STATISTICAL STRUCTURE OF THE ATMOSPHERIC PRESSURE FIELD IN SUMMER MONEX-79 AREA

I. A. DUYBKIN, E. A. SOSNINA, and N. A. SHKABURA *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 4 p Apr. 1981 refs
Avail: NTIS MF A01; HC WMO

Atmospheric pressure measurements (P) obtained from ships and three stationary polygons are presented. Diurnal course values, the temporal correlation structural functions, and their 95% confidence intervals were calculated using data with the diurnal course included and excluded. These show that in the northwest Indian Ocean the mean background of pressure oscillates within the limits 1011, 9 + or - 0, 7gPa and the scatter of singular measurements is within 1011, 9 + or - 2, 8gPa in the premonsoon period. During transition to monsoon circulation it is within 1008, 7 + or - 1, 2gPa and 1008, 7 + or - 3, 7gPa. During the monsoon onset it is 1007, 4 + or - 1, 2gPa and 1007, 4 + or - 3, 2gPa. The mean pressure field variability sigma p shows no significant differences for the polygons. It is within 1,4 sigma p 1, 7gPa. Author (ESA)

ANALYSIS OF OCEAN AND ATMOSPHERE THERMODYNAMICAL CHARACTERISTICS DURING THE ONSET OF SOUTHWEST MONSOON OVER THE ARABIAN SEA

P. V. NUZHDIN *In* WMO Intern. Conf. on Early Results of FGGE and Large-Scale Aspects of its Monsoon Expt. 2 p Apr. 1981
Avail: NTIS MF A01; HC WMO

Ship surface and oceanographic data are used to analyze the onset of the Arabian Sea monsoon. Areas of marked heat storage, such as the central Arabian Sea are treated as centers of air sea coupling. A positive enthalpy anomaly is formed in this area from April to June, together with the Somali current, determines monsoon intensity. Enthalpy (H) and potential energy (Ep) were computed for the ocean layers 0 to 100 and 0 to 500 m as well as latent heat and sensible heat fluxes in the surface atmospheric layer over the ocean. The difference between the series of these characteristics for the premonsoon period and the period of the steady enthalpy decrease and heat and moisture flux increase is significant. Monsoon onset can be predicted from the moment when H and Ep stop oscillating drastically and H starts decreasing steadily. Author (ESA)

Of the Nearly 1000 standard infrared photographic images received, 273 images were on computer compatible tape. It proved necessary to digitally enhance the scene contrast to cover only a select few degrees K over the photographic grey scale appropriate to the scene-specific range of sea surface temperature (SST). Some 178 images were so enhanced. Comparison with sea truth show that SST, as seen by satellite, provides a good guide to the ocean currents and eddies off East Australia, both in summer and winter. This is in contrast, particularly in summer, to SST mapped by surface survey, which usually lacks the necessary spatial resolution. Author

THE EFFECT OF SEA-SURFACE SUN GLITTER ON MICROWAVE RADIOMETER MEASUREMENTS

F. J. WENTZ 4 Nov. 1981 58 p refs
(Contract JPL-954958)
(NASA-CR-169083; JPL-9950-652; NAS 1.26:169083; RSS-TR-110481) Avail: NTIS HC A04/MF A01 CSCL 20N

A relatively simple model for the microwave brightness temperature of sea surface Sun glitter is presented. The model is an accurate closeform approximation for the fourfold Sun glitter integral. The model computations indicate that Sun glitter contamination of on orbit radiometer measurements is appreciable over a large swath area. For winds near 20 m/s, Sun glitter affects the retrieval of environmental parameters for Sun angles as large as 20 to 25 deg. The model predicted biases in retrieved wind speed and sea surface temperature due to neglecting Sun glitter are consistent with those experimentally observed in SEASAT SMMR retrievals. A least squares retrieval algorithm that uses a combined sea and Sun model function shows the potential of retrieving accurate environmental parameters in the presence of

Sun glitter so long as the Sun angles and wind speed are above 5 deg and 2 m/s, respectively. Author

(E82-10360; NASA-CR-168981; NAS 1.26:168981; INPE-2284-PRE/060) Avail: NTIS HC A04/MF A01 CSCL 04A

LANDSAT multispectral scanner data of the smoke plumes which originated in eastern Cabo Frio, Brazil and crossed over into the Atlantic Ocean, are analyzed to illustrate how high resolution LANDSAT imagery can aid meteorologists in evaluating specific air pollution events. The eleven LANDSAT images selected are for different months and years. The results show that diffusion is governed primarily by water and air temperature differences. With colder water, low level air is very stable and the vertical diffusion is minimal; but water warmer than the air induces vigorous diffusion. The applicability of three empirical methods for determining the horizontal eddy diffusivity coefficient in the Gaussian plume formula was evaluated with the estimated standard deviation of the crosswind distribution of material in the plume from the LANDSAT imagery. The vertical diffusion coefficient in stable conditions is estimated using Weinstock's formulation. These results form a data base for use in the development and validation of meso scale atmospheric diffusion models. Author

ICE DISTRIBUTION AND WINTER SURFACE CIRCULATION PATTERNS, KACHEMAK BAY, ALASKA
L. W. GATTO Dec. 1981 52 p refs
(AD-A110806; CRREL-81-22) Avail: NTIS HC A04/MF A01 CSCL 08C

Development of the hydropower potential of Bradley Lake, Alaska, would nearly double winter freshwater discharge from the Bradley River into upper Kachemak Bay, and the Corps of Engineers is concerned about possible subsequent increased ice formation and related ice-induced problems. The objectives of this investigation were to describe winter surface circulation in the bay and document ice distribution patterns for predicting where additional ice might be transported if it forms. Fifty-one LANDSAT MSS band 5 and 7 and RBV images with 70% cloud cover or less, taken between 1 November and 30 April each year, were analyzed for the eight winters from 1972 to 1980 with standard photointerpretation techniques. Results of this analysis showed that glacial sediment discharged into Kachemak Bay acts as a natural tracer in the water. Inner Kachemak Bay circulation in the winter is predominantly counterclockwise, with northeasterly nearshore currents along the south shore and southwesterly nearshore currents along the north shore. Most of the ice in the inner bay forms at its northeast end and is discharged by the Fox, Sheep and Bradley Rivers. Some ice becomes shorefast on the tidal flats at the head of the bay, while some moves southwestward along the north shore pushed by winds and currents. When this ice reaches Coal Bay, it accumulates between Homer Spit and the north shore. This buildup extended out to Coal Point at the tip of Homer Spit in February 1976 and 1979; ice was not observed in the nearshore zone along the south shore of the inner bay. GRA

(Contract N00014-80-C-0440)
(AD-A111080; SIO-REF-81-38) Avail: NTIS HC A03/MF A01 CSCL 08J

Early observations in the Central North Pacific indicate a general decrease in temperature and salinity as one moves northward from the equator. The change is not a smooth function of latitude, but rather, superimposed on a steady poleward decrease of temperature and salinity are regions of abrupt change called fronts (Seckel, 1968; Roden 1972). The general strength and location of the mid-ocean fronts are well-known. Near 45 deg. N latitude is the Pacific Subarctic Front. It separates the Pacific Subarctic water mass from the North Pacific Central water mass and is characterized by a change of 4 C per 30km and 0.6% per 30km across the front. In the vicinity of 32 deg. N is the Pacific Subtropical Front. It separates the North Pacific Central water mass from the Pacific Equatorial water mass and is characterized by a change of 2 deg. C per 30km and 0.25% per 30km across the front (Roden, 1975). A schematic map of the Central North Pacific Fronts is shown. Although the general location and strength of the mid-ocean fronts are well documented, little is known about variability associated with frontal strength and position. In December 1979 a large observational program (FRONTS 80) was undertaken to obtain basic scale information on a mid-ocean front. The North Pacific Subtropical Front, near 31 deg. N, 153 deg. W was chosen as the experiment site because of its logistical proximity to the U.S. mainland and Hawaii, and because extensive historical data exists for this region. GRA

TECHNOLOGY AND OCEANOGRAPHY: AN ASSESSMENT OF FEDERAL TECHNOLOGIES FOR OCEANOGRAPHIC RESEARCH AND MONITORING. VOLUME 2: WORKING PAPERS ON FISHERY RESEARCH TECHNOLOGY
Jun. 1981 245 p refs
Avail: NTIS HC A11/MF A01

The existing Federal research programs on ocean fisheries and other living oceanic resources are reviewed. The research technology and the programs provide the needed management information are evaluated and preparation for future demands on that technology and on the programs using it is discussed. The fishery research which is needed by international fishery agreements and by all regional fishery management councils is discussed. The stocks, measuring the abundance of each, and forecasting the effects on them of fishing and of environmental changes are described. E.A.K.

RAPID OCEANOGRAPHIC DATA GATHERING: SOME PROBLEMS IN USING REMOTE SENSING TO DETERMINE THE HORIZONTAL AND VERTICAL THERMAL DISTRIBUTIONS IN THE NORTHEAST PACIFIC OCEAN M.S. Thesis
G. W. LUNDELL Sep. 1981 189 p refs
(AD-A111005; NPS68-81-006) Avail: NTIS HC A09/MF A01 CSCL 08J

NOAA-6 satellite AVHRR data and AXBT data were collected in the Northeast Pacific Ocean in late 1980 as part of the Naval Postgraduate School-sponsored Acoustic Storm Transfer and Response Experiment which was in turn part of the U.S.-Canadian Storm Transfer and Response Experiment (STREX). Some of the problems in transferring AXBT geographical positions to satellite images were solved by designing a computer program with accuracies of less than 2 pixels. Thermal comparisons were made between AXBT, NOAA-6, and GOSSTCOMP data with the result that NOAA-6 data was on the average of 2.9 C colder than AXBT data and 3.2 C colder than GOSSTCOMP data. Linear regression methods reduced to 0.3 C the difference between NOAA-6 and AXBT data. Use of this method over a period of 15 days produced a mean error of 0.5 C. Although NOAA-6 cannot sense directly the subsurface thermal structure, it is excellent for observing surface manifestations of horizontal thermal features. Further investigation into using satellite data as the basis of an empirical relationship between the surface temperature and the subsurface vertical thermal structure is warranted. Author (GRA)

FLUID-SEDIMENT INTERACTIONS ON BEACHES AND SHELVES Progress Report, 1980 - 1981

D. L. INMAN, C. D. WINANT, R. T. GUZA, and R. E. FLICK 11 Sep. 1981 91 p refs

(Contract N00014-75-C-0300)

(AD-A110838; SIO-REF-81-27) Avail: NTIS HC A05/MF A01 CSCL 08C

This research seeks to predict shelf and beach forms and their changes from knowledge of local bathymetry and the driving forces due to winds, waves and currents and their complicated interactions with nearshore sediments. The work falls into three distinct but interdependent areas of research: wave and current dynamics; fluid-sediment interactions; coastal zone remote sensing. The principal area of interest in wave and current dynamics continues to be wind generated, surface gravity waves and the currents and other fluid motions which derive their energy from surface waves. The fluid sediment interaction studies lead to an understanding of the shelf and beach sediment response including the fundamental rheology of granular fluids, the longshore and on-offshore transport of sand and the formation of features like cusps and bars. The coastal zone remote sensing tasks are largely exploratory in nature, with the general objective of determining the extent to which signatures from remote sensors can be used to define the broader spatial characteristics of driving forces, and the larger scale ocean surface patterns that are characteristic of nearshore dynamics. MOVEMENT OF ICE MARKERS MEASURED BY SATELLITE RANGING

P. GUDMANDSEN, C. CARLE, and J. MAALOEE Paris ESA Jun. 1981 82 p refs

(Contract ESA-4634/81)

(R-240; ESA-CR(P)-1547) Avail: NTIS HC A05/MF A01

A method for determining the surface velocity of large ice sheets in Greenland and Antarctica involves measuring the change of distance between fixed markers and those on ice sheets, using ERS-1 for altimetry and radar ranging. An acceptable signal to noise ratio can be obtained with the ERS-1 high gain antenna and a marker, consisting of a square trihedral corner reflector, with side length = 1.5 m, radar cross section 55 dB. The high gain antenna limits the area investigated to an 18 km swath, assuming a 5 deg incidence angle. A Swerling type radar cross section of the corner reflector results in a 62% detection probability for 6-pulse integration. Displacement of markers can only be measured at crossing ground tracks when the satellite is operated in a rigid orbit mode, i.e., a 20 X 20 km area. Accuracy of 78 cm is possible. Author (ESA)

EFFECTIVE ELECTROMAGNETIC SHIELDING IN MULTILAYER PRINTED CIRCUIT BOARDS

K. G. WILES and J. L. MOE (General Dynamics Corp., Fort Worth, TX) In: Digital Avionics Systems Conference, 4th, St. Louis, MO, November 17-19, 1981, Collection of Technical Papers. New York, American Institute of Aeronautics and Astronautics, 1981, p. 593-596.

(AIAA 81-2333)

Multilayer printed circuit boards have proven to be recurrent abettors of electromagnetic coupling problems created by the incessantly faster response times in integrated circuit technologies. Coupling within multilayer boards has not only inhibited meeting certain EMI requirements but has also precipitated 'self-inflicted' malfunctions commonly experienced during development of avionic systems. A recent avionic system, interfacing two asynchronous processors through a fourteen-layer motherboard, permitted coupling through ground plane connector apertures of sufficient amplitude and duration as to cause unintentional intercommunication and system malfunctions. The coupling mechanism and ground plane modifications which reduced this coupling by 40 dB and eliminated the incompatibility are discussed in this paper (Author)

THE MODULATION CHARACTERISTICS OF THE 19TH AND 20TH SOLAR ACTIVITY CYCLES

N. N. KONTOR, G. P. LIUBIMOV, N. V. PERESLEGINA, and T. I. STEPINA (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 179-182. refs

The intensity modulation of galactic cosmic rays at 1 AU from the sun is described in terms of the nonstationary model. The dependencies of the modulation coefficients are found, which characterize the galactic cosmic ray fluxes to and from the sun on the solar activity level, and consideration is given to the dependencies of the modulation parameters on time and cosmic ray energy. Significant variations are observed in the modulation factors, even for the smoothed data, and the transparency coefficient is proportional to the particle energy, while the transfer coefficient is inverse. A SIMULATION STUDY OF SOIL MOISTURE ESTIMATION BY A SPACE SAR

F. T. ULABY, C. DOBSON, J. STILES, R. K. MOORE, and J. HOLTZMAN (University of Kansas Center for Research, Inc., Lawrence, KS) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 645-660. refs

An evaluation of the accuracy of soil moisture estimates available from satellite radar remote sensing is made, along with an assessment of the effects of spatial resolution on the estimation accuracy. Synthetic aperture radar (SAR) images of a 17.7 x 19.3 km test site were generated by image simulation techniques for a space SAR orbiting at 600 km and operating at 4.75 GHz, an HH polarization, and an angle of incidence range between 7-22 deg from nadir. Data bases were constructed of U-2 color IR photographs, 20 m x 20 m pixel soil elements from the USDA totalling 800,000 pixels classified for target class, soil texture, and surface elevation. Three sets of images were generated for four varying soil moisture distributions across the site. Soil moisture in 90% of the 20 m x 20 m pixels were found to be predictable in terms of moisture capacity to within 20%. A 100 m x 100 m resolution was best for very dry soil conditions. M.S.K.

INTERPRETATION OF SURFACE-WATER CIRCULATION, ARANSAS PASS, TEXAS, USING LANDSAT IMAGERY

R. J. FINLEY and R. W. BAUMGARDNER, JR. (Texas, University, Austin, TX) Remote Sensing of Environment, vol. 10, Aug. 1980, p.3-22. refs

(Contract NAS5-20986)

The development of plumes of turbid surface water in the vicinity of Aransas Pass, Texas has been analyzed using Landsat imagery. The shape and extent of plumes present in the Gulf of Mexico is dependent on the wind regime and astronomical tide prior to and at the time of satellite overpass. The best developed plumes are evident when brisk northerly winds resuspend bay-bottom muds and flow through Aransas Pass is increased by wind stress. Seaward diversion of nearshore waters by the inlet jetties was also observed. A knowledge of surface-water circulation through Aransas Pass under various wind conditions is potentially valuable for monitoring suspended and surface pollutants (Author)

THE GROWTH OF SNOW IN WINTER STORMS - AN AIRBORNE OBSERVATIONAL STUDY

K. K. LO and R. E. PASSARELLI, JR. (MIT, Cambridge, MA) Journal of the Atmospheric Sciences, vol. 39, Apr. 1982, p. 697-706. refs

(Contract F19628-80-C-0021)

In studies of precipitation growth, comparisons between theory and observation are difficult because of the problem in obtaining a complete four-dimensional (space and time) description of the kinematic, thermodynamic and microphysical properties of the atmosphere. A new flight plan has been devised which permits one to observe the height evolution of snow-size spectra in a reference frame where the effects of horizontal gradients and temporal changes are minimized. The flight plan, termed the advecting spiral descent (ASD), requires an aircraft to start aloft in a mesoscale precipitation area and then spiral downward in a constant bank angle, descending at approximately the mean fallspeed of snow. Qualitative comparisons between ASD observations and particle growth theory suggest that snow evolves through at least three stages characterized by deposition, aggregation and breakup. The breakup process serves to limit the number of large snow particles and interacts with aggregation to produce a limiting value of the slope of the snow-size spectrum. (Author)

AUTOMATED CLASSIFICATION OF RUNOFF COEFFICIENTS FROM LANDSAT MULTISPECTRAL DATA

F. ASKARI (Ohio State University, Columbus, OH) and N. L. FAUST (Georgia Institute of Technology, Atlanta, GA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 426-439. Research supported by the Ohio State University Research Foundation. refs

Multispectral data from Landsat are used with aircraft color infrared photography to derive the runoff coefficients for watersheds in Mill Creek, Ohio. Regression models are developed from the treatment of the runoff coefficient of each sample site as the dependent variable, and the mean radiance measurements in the four Landsat channels as the independent variables. A comparison of classification results illustrates the spatial and temporal variations of runoff potential for the surface. Single cover test fields and test watersheds are used to verify the model results, and the mean runoff coefficients derived for the test watersheds from the multispectral data analysis technique compare favorably with those obtained from ground truth. D.L.G.

USE OF AERIAL PHOTOGRAPHY IN DETERMINING LAND USE AND STREAMFLOW RELATIONSHIPS ON SMALL DEVELOPING WATERSHEDS

M. OWE (NASA, Goddard Space Flight Center, Hydrological Sciences Branch, Greenbelt, MD) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 466-475. refs

Using aerial photographs dating back to 1937, the historical trends of five land use classes (crop, forest, open field, urban and suburban) are determined. The relationships between these and various flow regime parameters are investigated. Annual runoff is found to be 7.5 inches greater now than in the year 1932. It is also found that growing season runoff increased by 3.5 inches during the same period. This increase is approximately equivalent to 160 area inches of excess runoff during the 45-year period of observation. The increase in runoff is found to be positively correlated with the percent basin area in the urban, suburban and open field land use classes. A negative correlation is established with forest and crop land. Although poor correlations are found with high flow, low flow, flow interval and flow date data, it is thought that a more precise quantification of land use or a smaller basin area may possibly have yielded more positive results for streamflow timing data. C.R.

A82-34745

AERIAL PHOTOGRAPHY VS. LANDSAT FOR DIGITAL LAND-COVER MAPPING IN AN URBAN WATERSHED

B. K. QUIRK and F. L. SCARPACE (Wisconsin, University, Madison, WI) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 610-617. refs

A comparison was made between digital analyses of color infrared film and Landsat to provide land-cover information in an urban watershed. The results were compared to a manual photo interpretation of a black and white infrared photograph. Both the color infrared and Landsat produced similar land-cover acreages and both were similar to the black and white interpretation. However, the color infrared was found to be a better representation. (Author)

PRINCIPLES AND METHODS OF THE STUDY OF THE HYDROLOGICAL CYCLE ON THE BASIS OF AEROSPACE DATA [PRINTSIPY I METODY IZLUCHENIIA GIDROLOGICHESKOGO TSIKLA PO AEROKOSMICHESKOI INFORMATSII]

IU. V. KURILOVA, A. M. GRIN, and P. A. KOLOSOV In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 5-18. In Russian. refs

The paper examines the possibilities and advantages of using satellite data to study various aspects of the hydrological cycle. Methods for evaluating the separate components of the cycle are generalized. In addition, indirect methods for determining slowly and rapidly varying parameters of the cycle on the basis of global TV and IR data acquired by satellites are proposed. Attention is also given to the principles of dynamic regionalization according to types of processes and landscape features on the basis of multispectral data. B.J.

WATER-BALANCE DIFFERENTIATION OF NATURAL COMPLEXES ON THE BASIS OF SATELLITE PHOTOGRAPHS [VODNOBALANSOVAIA DIFFERENTSIATSIIA PRIRODNYKH KOMPLEKSOV NA OSNOVE ISPOL'ZOVANIIA KOSMICHESKIKH SNIMKOV]

A. V. LEBEDEV In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 25-29. In Russian. refs

The paper examines methods for assessing the role of natural complexes, particularly forest complexes, in hydrology. These methods are then used to evaluate techniques of the differentiation and mapping of hydrological parameters on the basis of the structural elements of natural-territorial complexes. As an example, attention is given to the thermal and water-balance characteristics of the natural complexes of the middle and southern taiga of the Ob-Yenisei interfluve as determined from satellite photographs. B.J.

A82-35130

THE POSSIBILITY OF USING REMOTE-SENSING METHODS TO STUDY THE HYDROLOGY OF ELEMENTARY WATERSHEDS [VOZMOZHNOSTI PRIMENENIIA DISTANTSIONNYKH METODOV V OBLASTI GIDROLOGII ELEMENTARNYKH VODOSBOROV]

K. KASPRZHAK and F. SHABELA In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 30-35. In Russian. refs

Theoretical and experimental determinations of the microwave radiation characteristics of wet soils are compared. A survey is then presented of methods for measuring the hydrological regimes of soils in the visible, infrared, and microwave ranges. Particular emphasis is placed on the use of active-radar techniques at wavelengths of 0.3-30 cm and even 100 cm, which make it possible to analyze the hydrological regimes of soils at great depths. B.J.

A82-35131

THE SEASONAL SNOW-LINE WITHIN THE FERGANA BASIN AND THE POSSIBILITY OF USING IT FOR HYDROLOGICAL FORECASTING [SEZONNAIA SNEGOVAIA GRANITSA V PREDELAKH FERGANSKOI KOTLOVINY I VOZMOZHNOSTI EE ISPOL'ZOVANIIA V GIDROPROGNOZAKH]

O. P. SHCHEGLOVA and V. IU. CHERNOV In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 36-41. In Russian. refs

TV data acquired by meteorological satellites during 1969-1978 are used to study snow cover within the mountain region of the Fergana basin. The dynamics of the seasonal snow-line during spring thaw is investigated; and the positions of the seasonal snow-line for individual days in 1969 are given. The data are used to evaluate the possibility of making hydrological forecasts on the basis of relationships between the monthly average water discharge and the height of the snow line at the end of the preceding month. B.J.

METHOD FOR THE ANALYSIS OF THE MELTING OF A FIRN COMPLEX ON THE BASIS OF AEROSPACE PHOTOGRAPHS [METODIKA RASCHETA TAIANIIA KOMPLEKSA SNEZHNIKOV PO AEROKOSMICHESKIM SNIMKAM]

N. I. OSOKIN In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 46-49. In Russian. refs

The characteristics of firn melting are investigated on the basis of field studies performed in the polar Urals, Crimea, and Kamchatka, as well as on the basis of satellite data. It is shown that the intensity of melting is determined by the dimensions and shape of the firn basin. A dimensionless parameter for the shape of a firn basin is proposed which makes it possible to calculate the melting rate of individual firn basins as well as their complexes. Methods of automated processing of satellite photographs are examined, which may be used to determine this parameter in hydrometeorological calculation and forecasting. B.J.

A82-35134

EXPERIENCE WITH THE COMPILATION OF MAPS OF SNOW-COVER MELTING IN THE CENTRAL PART OF THE EUROPEAN USSR ON THE BASIS OF SATELLITE DATA [OPYT SOSTAVLENIIA KART SKHODA SNEZHNOGO POKROVA TSENTRAL'NOI CHASTI ETS PO DANNYM SPUTNIKOVOI INFORMATSII]

M. S. DELEUR, E. I. PANKRATOVA, and L. P. BABKINA In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 50-54. In Russian.

The paper examines techniques for the compilation of snow-cover melting maps from satellite photographs as well as methods for the interpretation of snow-cover features for various territories. Attention is given to the possibility of determining the following features from satellite photographs: the position of snow lines and the velocity of their motion, and the extent of snow in river drainage systems. The accuracy with which snow lines can be depicted on maps is examined. B.J.

A82-35136

EVALUATION OF THE ACCURACY OF WATER-SURFACE TEMPERATURE MEASUREMENT BY MEANS OF AIRBORNE INFRARED RADIOMETERS [OTSENKA TOCHNOSTI IZMERENIIA TEMPERATURY POVERKHNOSTI VODY SAMOLETNYM RADIATSIONNYM TERMOMETROM]

A. M. NIKITIN and S. N. TEMNIKOV In: Study of the hydrological cycle by aerospace methods. Moscow, Izdatel'stvo Radio i Sviaz', 1982, p. 62-64. In Russian.

Two sets of experiments are described whose objective was to evaluate the accuracy of the MIR-3 small-scale infrared radiometer, installed on the Il-14 aircraft, for measuring the surface temperature of natural water bodies. The first set involved measurements of the surface temperature of Lake Issyk-Kul, carried out in July 1977. The second set involved five series of measurements of the surface temperature of the Aral Sea and five series of measurements of the surface temperature of Lake Issyk-Kul. The effect of atmospheric attenuation on the performance of the radiometers was evaluated. B.J.

THE USE OF SPACE PHOTOGRAPHS IN THE MAPPING OF GLACIERS AND WATER BODIES [ISPOL'ZOVANIE KOSMICHESKIKH SNIMKOV PRI KARTOGRAFIROVANII LEDNIKOV V VODNYKH OB'EKTOV]

M. A. ALIMUKHAMEDOV, IU. N. LESNIK, and A. M. TIMOSHENKO Geodeziia i Kartografiia, May 1982, p. 24-30. In Russian. refs

The use of black and white, multispectral, and color space photographs for the investigation of glaciers and water resources in the Middle Asiatic region has made possible the operational monitoring of their state and dynamics. Morphometric indices for the Fedchenko glacier, the Aidaro-Arnasaiskii water complex, and Lake Sarykamysh obtained from the interpretation of space photographs were found to be sufficiently accurate for various practical needs of the economy. B.J.

A82-37501

REMOTE SENSING IN SCOTLAND USING DATA RECEIVED FROM SATELLITES - A STUDY OF THE TAY ESTUARY REGION USING LANDSAT MULTISPECTRAL SCANNING IMAGERY

A. P. CRACKNELL, N. MACFARLANE, K. MCMILLAN, J. A. CHARLTON, J. MCMANUS (Dundee, University, Dundee, Scotland), and K. A. ULBRICHT (Deutsche Forschungsund Versuchsanstalt fuer Luft- und Raumfahrt, Oberpfaffenhofen, West Germany) International Journal of Remote Sensing, vol. 3, Apr.-June 1982, p. 113-137. Research supported by the Carnegie Trust and Science and Engineering Research Council. refs

Multispectral scanning data from Landsat are used to study the sandbanks and tidal flats in the Tay Estuary, and the specialized digital image-processing system used in the study is briefly described. Several examples of Landsat-2 images of the Tay Estuary and its environs are presented as false-color composites and monochrome pictures, and a qualitative interpretation and several quantitative ones are presented. The low-water mark for sandbanks in the upper and lower estuary is determined and the results are compared with existing charts and maps, showing that changes in the positions of sandbanks of the size found in the estuary can be monitored satisfactorily using satellite imagery. The position of an estuarine front is mapped and also observed in situ in the position indicated by this image. An attempt at quantitative bathymetry, using a high tide Landsat image, indicated that depths up to three or four meters can be determined from the satellite data, but the accuracy is rather poor. C.D.

Original imagery may be purchased from NASA Goddard Space Flight Center, (code 601), Greenbelt, Md. 20771. Domestic users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A for Rockets and Satellites'. HCMM (Contract NAS5-24316)

(E82-10191; NASA-CR-168619; NAS 1.26:168619; ERT-P-2061-F) Avail: NTIS HC A06/MF A01 CSCL 08L

The application of HCMM thermal infrared data to snow hydrology and the prediction of snowmelt runoff was evaluated. Data for the Salt Verde watershed in central Arizona and the southern Sierra Nevada in California were analyzed and compared to LANDSAT and NOAA satellite data, U-2 thermal data, and other correlative data. It was determined that HCMM thermal imagery provides data as accurate for snow mapping as does visible imagery, and that in comparison with the reslution of other satellite imagery, it may be the most useful. Data from the HCMM thermal channel, with careful calibration, provides useful snow surface temperature data for hydrological purposes. An approach to an automated method of analysis is presented. BIAS CORRECTION PROCEDURES FOR AIRBORNE LASER HYDROGRAPHY

G. C. GUENTHER and R. W. L. THOMAS Aug. 1981 110 p refs Prepared in cooperation with EG and G Washington Analytical Services Center, Inc., Rockville, Md. sponsored in part by Naval Ocean Research and Development Activity, NSTL Station, Miss.

(PB82-130089; NOAA-TR-OTES-03; NOAA-8110502) Avail: NTIS HC A06/MF A01 CSCL 08J

Depending on the entry nadir angle of the beam and the optical properties of the water, one of two opposing effects, multiple scattering and geometric 'undercutting', will dominate and result in either a deep or shallow depth measurement bias, respectively. The magnitude of this bias can greatly exceed international hydrographic accuracy standards, and hence bias correctors must be calculated and applied to the raw depths in postflight data processing to attain the required accuracy for the overall system. The magnitudes of the bias correctors depend not only on the water and flight parameters, but also on the basic design of the receiver electronics. Several typical systems and procedures required to calculate a set of bias correctors for any given system are described and a cookbook approach for the necessary postflight data processing algorithms are included. A STATISTICAL APPROACH TO RAINFALL ESTIMATION USING SATELLITE AND CONVENTIONAL DATA

L. F. WHITNEY, JR. Apr. 1982 55 p refs

(NOAA-TR-NESS-89) Avail: NTIS HC A04/MF A01

A statistical approach is employed in an attempt to estimate convective rainfall using both satellite and conventional data. A variety of variables derived from both satellite and conventional meteorological sources are presented. From among these variables, a screening regression method selects those which best explain area-averaged rainfall. Among the cases studied, the relationship of each variable to rainfall is weak to poor, particularly as cases are combined. Although multivariate selections improve the relationships, inconsistency of selection develops from one case to another and from one time to another, even in the same meteorological situation. Regression equations are found to estimate the amount inadequately, even when using dependent data. At best, rainfall is not likely to be measured quantitively by such an approach and, at worst, concern is raised about the validity of using the variables investigated to estimate rainfall. B.W.

DYNAMIC STUDY OF THE UPPER SAO FRANCISCO RIVER AND TRES MARIAS RESERVOIR USING MSS/LANDSAT IMAGES M.S. Thesis

N. DEJESUSPARADA, Principal Investigator and T. M. SAUSEN Oct. 1981 272 p refs In PORTUGUESE; ENGLISH summary ERTS

(E82-10291; NASA-CR-168860; NAS 1.26:168860; INPE-2249-TDL/066) Avail: NTIS HC A12/MF A01 CSCL 05B

The relationship between the dispersion and concentration of sediment in the superficial layers of the Tres Marias reservoir and the dynamics of the drainage basins of its tributaries was verified using LANDSAT MSS imagery. The drainage network, dissection patterns, and land use of each watershed were considered in an analysis of multispectral images, corresponding to bands 4,5, and 7, of dry and rainy seasons in 1973, 1975, 1977, and 1978. The superficial layer water layers of the reservoir were also divided according to the grey level pattern of each image. Two field trips were made to collect Secchi depths and in situ water reflectance. It is concluded that it is possible to determine the main factors that act in the dynamics of the drainage basins of a reservoir by simultaneous control of the physical variables and the antropic action of each basin. HCMM HYDROLOGICAL ANALYSIS IN UTAH Quarterly Progress Report

28 Feb. 1982 43 p Sponsored by NASA HCMM

(E82-10328; NASA-CR-168907; NAS 1.26:168907; QPR-3) Avail: NTIS HC A03/MF A01 CSCL 05B

Temperature calibration and groundwater depth location studies were finalized. Distinctions among algae species and among suspended materials (turbidity) using HCMM data were investigated. Field evaluations of algae's effect on evaporation pan readings were completed and related to the lake and HCMM data. Additional correlations among infrared and reflectivity data were made using the color graphics capabilities developed during this project. E.A.K.

FRAGMENTATION OF FE NUCLEI ON CARBON, HYDROGEN AND CH2 TARGETS. I - INDIVIDUAL CHARGE CHANGING AND TOTAL CROSS SECTIONS. II - ISOTOPIC CROSS SECTIONS

D. A. BRAUTIGAM, J. H. CHAPELL, J. C. KISH, G. A. SIMPSON, and W. R. WEBBER (New Hampshire, University, Durham, NH) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 173-180. refs

(Contract NGR-30-002-052)

The fragmentation of Fe nuclei in carbon and CH2 targets at energies of 650, 800, and 950 MeV/nuc has been studied. Direct measurements of the interaction between Fe nuclei and the carbon and CH2 targets were carried out. The Fe to H charge changing cross sections derived for selected nuclei showed a clear energy dependence, consistent with the results of Westfall et al. (1979). Values for the total inelastic cross section Fe to H charge changing were obtained by two methods: the first method involved subtracting the total CH2 and C cross sections (values of 703 plus or minus 9 mb and 65 plus or minus 10 mb at 950 MeV/nuc and 650 MeV/nuc, respectively were obtained). The same cross sections were obtained by adding the individual charge changing cross sections. A cross section for Fe to fragment into lower mass Fe isotopes of 65 plus or minus 5 mb was also observed, giving total inelastic mass changing cross sections of 768 plus or minus 11 mb and 716 plus or minus 12 mb, respectively. In addition, the individual isotopic cross sections for Z equals 16-25 are reported. J.F.

THE CHARGE AND ISOTOPIC COMPOSITION OF Z EQUALS 7-16 COSMIC RAY NUCLEI AT THEIR SOURCE

W. R. WEBBER (New Hampshire, University, Durham, NH) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 261-264. refs

(Contract NGR-30-002-052)

Using the combined data from our 1976 and 1977 balloon flights, the charge and isotopic composition of Z equals 7-16 cosmic ray nuclei have been determined. A low abundance of both N and Ne in the cosmic ray source relative to solar cosmic rays is observed. However, the cosmic ray source ratio, Ne-22/Ne is 2.75 plus or minus 0.42 times the solar ratio. A possible enhancement of the Mg-26/Mg ratio, which is 1.29 plus or minus 0.14 times the solar ratio is also observed. (Author)

A82-22558

COSMIC RAY COMPOSITION FROM ACCELERATION OF THERMAL MATTER

J. PEREZ-PERAZA (Universidad Nacional Autonoma de Mexico, Villa Obregon, Mexico) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 273-276.

The source composition of cosmic rays is thought to be controlled by Coulombian interactions during the acceleration of thermal matter. A given element is representative of the source or depletion depending on whether the predominant ionic state at the temperature of the source is lower than a threshold imposed by Coulombian losses. Coupling this restriction to the theory of ionization equilibrium, the source abundances are calculated. The results corroborate sources of relatively low temperature. C.R.

A82-22568

ACCELERATION OF COSMIC RAYS IN ACCRETION SHOCKS

R. COWSIK (Tata Institute of Fundamental Research, Bombay, India) and M. A. LEE (New Hampshire, University, Durham, NH) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 318-321. refs

Spherically symmetric accretion around condensed astronomical objects like white dwarfs, neutron stars and black holes very often go through a quasi-stationary shock close to the object. The transport of radiation, energetic particles and neutrinos in such flows is studied, and it is found that these are accelerated to high energies very efficiently. The generated spectra are seen to have power-law behavior when the diffusion coefficient is independent of particle momentum. The possibility that the bulk of the galactic cosmic rays are accelerated by approximately 10,000 neutron stars which are surrounded by dense interstellar clouds is briefly discussed. (Author)

THE GALACTIC ORIGIN OF COSMIC RAYS. II

S. A. COLGATE (Los Alamos National Laboratory, Los Alamos; New Mexico Institute of Mining and Technology, Socorro, NM) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 352-355. refs

(CONF-810711-2; LA-UR-81-966)

The cosmic ray pressure limit to cosmic ray acceleration in the interstellar medium (ISM) is considered. It is found that the beta equals 1 Alfven speed streaming limit imposes a new and strong constraint on supernova-ISM shock models of cosmic-ray acceleration. A more detailed analysis is, therefore, required. Ultra-high energy cosmic rays are also discussed, giving attention to sources of cosmic rays inside and outside the Galaxy. In connection with complexities and constraints, one source for all energies within all galaxies is finally considered, taking into account a flattening of the source in slope and the characteristics of spectrum and flux produced by the shock ejection of the envelope of a type I supernova. G.R.

A82-22575

ASTROPHYSICAL SCENARIOS FOR CRITICALLY EVALUATING A ZERO-POINT FIELD ACCELERATION MECHANISM

A. RUEDA (Universidad de los Andes, Bogota, Colombia) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 361-364. refs

If the electromagnetic zero-point field of ordinary quantum theory is considered as a real field that may act on particles in the usual way that random fields act in classical electrodynamics, it is possible to show that electromagnetically interacting particles perform a random walk in velocity space to ever-increasing translational kinetic energies. As the zero-point field has a Lorentz invariant energy density spectrum, it can be shown that, in a very high vacuum an unconfined gas of infinitely many of those particle displays an energy spectrum of the form E to the (-eta) (eta is a parameter) when in equilibrium with the zero-point field. Scenarios are presented in order to critically discuss and evaluate the possible astrophysical relevance of the model as applied to the acceleration of particles in intergalactic space. (Author)

A82-22576

CALCULATION OF PRODUCTION RATES OF COSMOGENIC NUCLIDES BY MONTE CARLO METHOD

S. TOKAR and P. POVINEC (Komenskeho Univerzita, Bratislava, Czechoslovakia) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 374-377. refs

A method is presented for the calculation of production rates of cosmogenic nuclides based on Monte Carlo simulations of hadronic cascade processes in matter. Calculations are carried out for the case of a semi-infinite iron slab with a thickness of 2.5 m, and the hadronic cascade is assumed to consist only of nucleons and pions. The nuclide production is found to exhibit only a weak energy dependence, especially at higher energies. D.L.G.

A82-22577

MEASUREMENT OF COSMOGENIC NUCLIDES USING A MULTI-CRYSTAL GAMMA-RAY COINCIDENCE SPECTROMETER

J. C. BARTON (North London, Polytechnic, London, England) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 378-381.

The activities of Na-22 and Al-26 in a recently fallen meteorite, Mayo Belwa, have been measured using an improved gamma-ray spectrometer. This uses six sodium iodide detectors, arranged symmetrically, so that extended samples can be measured. By recording total rates, 2-fold and 3-fold coincidences simultaneously, it is possible to correct for source absorption and other instrumental effects. The absolute intensity of Al-26 was found to be comparable to that found in other meteorites, but that of Na-22 is anomalously high. (Author)

A82-22578

NUCLEOSYNTHESIS OF LIGHT AND BY-PASSED ISOTOPES IN THE SOLAR SYSTEM MATTER

A. K. LAVRUKHINA and R. I. KUZNETSOVA (Akademiia Nauk SSSR, Institut Geokhimii i Analiticheskoi Khimii, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 382-385. refs

A model of nucleosynthesis of light and by-passed isotopes is proposed, which is based on the idea that a supernova event led simultaneously to nuclei explosion burning, to collective acceleration of particles up to relativistic energies by shock waves, and to spallation reactions. It is shown that solar system matter was formed in two main events of intensive nucleosynthesis. The first event led to the formation of about 99 percent of K-40, V-50, and the by-passed isotopes with A not less than 113. The second event led to the formation of observed abundances of isotopes and about 1 percent of other products of spallation reactions. Proton fluxes, the alpha/p value, the gamma value, irradiation duration, and the sequence of nucleosynthesis processes are obtained. D.L.G.

A82-22579

MAGNETIC MONOPOLE PAIR AND ITS OBSERVATION IN COSMIC RAYS

L. LUO (Nei Monggol University, Hohhot, People's Republic of China) and T. LU (Nanjing University, Nanjing, People's Republic of China) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 388-391.

The bound system of a magnetic monopole and an antimonopole is analyzed. It is pointed out that the angular momentum of the ground state may be 48 or 194. Some unexplained events in cosmic rays may be identified as the monopole pairs with high spin. (Author)

INTERNATIONAL COSMIC RAY CONFERENCE, 17TH, PARIS, FRANCE, JULY 13-25, 1981, CONFERENCE PAPERS. VOLUME 3 [CONFERENCE INTERNATIONALE SUR LE RAYONNEMENT COSMIQUE, 17TH, PARIS, FRANCE, JULY 13-25, 1981, CONFERENCE PAPERS. VOLUME 3]

Conference sponsored by CEA, IUPAP, CESR, et al. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981. 543 p. In French and English.

The sun and heliosphere are examined from satellite data of solar cosmic ray events recorded by satellite and theories of the interplanetary propagation of particles and particle acceleration within the heliosphere. Attention is given to X ray, radio, energetic electron, gamma ray, and nuclear reactions of energetic protons observations of solar activity. Ground-, balloon-, and satellite-based detection of particle events are discussed, along with data relevant to the propagation of particles, especially for He-3 enriched events. Modulation of galactic cosmic rays by the solar cycle is explored, and theories of the interplanetary propagation of particles and of the heliospheric medium are presented. Theoretical models of the acceleration of particles within the heliosphere are investigated, including the effect of planetary magnetospheres on the solar-accelerated particles. M.S.K.

A82-22581

MODEL FOR SOLAR HARD X-RAY BURSTS

M. YOSHIMORI (Rikkyo University, Tokyo, Japan) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 4-7.

Balloon-borne observations of the hard X ray burst event of Sept 19, 1979 are presented as a basis for a description of the temporal behavior of a number of electrons. One NaI(Tl) monitor and four NaI(Tl) counters provided measurements in the energy ranges 30-50, 50-80, 80-120, and 120-200 keV with a counting rate of 1 sec. The energy spectra of the hard X rays were correlated with solar flares and sunspots, and were fitted to power law forms evaluated at the sampling time. A trap-plus-precipitation model describes accelerated electrons as being magnetically trapped and precipitated onto a denser region, leading to hard X ray emission, yielding an electron/X ray ratio calculated to be 1,700,000, in accord with other observations. A thermal model approximated the energy spectrum of hard X-rays by the thermal radiation spectrum from hot plasma, with variations in temperature and emission. M.S.K.

A82-22582

THE DETERMINATION OF DIFFERENTIAL X-RAY SPECTRUM OF THE SOLAR FLARE USING IONOSPHERIC DATA

I. D. KOZIN (Akademiia Nauk Kazakhskoi SSR, Sektor Ionosfery, Alma-Ata, Kazakh SSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 8-10.

The ionization velocity of X rays from a solar flare entering the lower ionosphere is determined by first assuming that the X ray spectrum outside the atmosphere is described by a third degree polynomial. The absorption of monochromatic radiation is modeled as a function of atmospheric density, of the absorption cross-section, and of the path length. The ionosphere is divided into three levels, from which coefficients are calculated from data on ionization from the X ray flux. Substitution of the coefficients into the third degree polynomial equation yields the differential X ray spectrum. M.S.K.

UNUSUAL PROPERTIES OF PARTICLE EVENTS ASSOCIATED WITH SOLAR FLARE GAMMA RAY EVENTS

P. EVENSON, P. MEYER, and S. YANAGITA (Chicago, University, Chicago, IL) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 32-35. refs

(Contract NAS5-20674)

An attempt to establish a link between gamma rays observed at the earth with solar flare areas highly enriched with electrons is presented. Two hour averages of the counting rates of 5-100 MeV electrons and 25-145 MeV protons performed on the ISEE-3 spacecraft were correlated with solar flares with a maximum intensity of 6-11 MeV electrons and 25-44 MeV protons recorded by other observers. The coverage was part of the Solar Maximum Mission, which attained a 50 percent coverage. Gamma ray associated events showed high ratios of electrons to protons, about 0.2, and electrons with energies greater than 80 MeV were observed, which are values high enough to produce the highest gamma rays observed, 40 MeV. The available data for electron, proton, and rare isotope fluxes and the time histories of the fluxes are noted to provide a data base for further information on solar flares and particle acceleration mechanisms. M.S.K.

OBSERVATIONS OF INTERPLANETARY ENERGETIC CHARGED PARTICLES FROM GAMMA-RAY LINE SOLAR FLARES

M. E. PESSES, G. GLOECKLER (Maryland, University, College Park, MD), B. KLECKER, and D. HOVESTADT (Max-Planck-Institut fur extraterrestrische Physik, Garching, West Germany) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 36-39. Bundesministerium fur Forschung und Technologie refs

(Contract BMFT-RV14-B8/74;

BMFT-01-0I-017-ZA/WF/WRK-1754; NAS5-20062)

Results from ISEE-3 experiments on interplanetary energetic charged particles on June 7, June 21, and July 1, 1980 dealing with gamma ray producing solar flares are reported. The data were gathered by the Ultra Low Energy Wide Angle Telescope, which comprises a thin window, flow through proportional counter/solid-state detector composition telescope. Evidence of a specified time delay from an observed flare and the recording of 0.44-1.3 MeV electrons on ISEE-3 combined with quiescent periods of at least two hours before the observations and recording provides a link between the events. The data indicates interplanetary energetic particle enhancement, and a second, similar set of occurrences was also observed. Protons were accelerated up to 10-20 MeV. No enrichment of either He-3 or Fe was found. M.S.K.

A82-22590

AZIMUTHAL PROPAGATION OF FLARE PARTICLES IN THE HELIOSPHERE

J. PEREZ-PERAZA and J. MARTINELL (Universidad Nacional Autonoma de Mexico, Villa Obregon, Mexico) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 55-58. refs

Empirically determined properties of solar coronal particle transport are used to quantitatively describe coronal propagation. A velocity dependence of the transport is formulated based on the diffusive nature of the transport and the observation that a drift motion acts on the particles. Both characteristics are assumed to be applicable outside of the fast propagation region, where convective processes dominate. An evolution of particle density is defined, and time profiles of the distribution are calculated for the two regions just before propagation into outer space. A prediction of prompt particles is made, and is caused by contact between the expanding magnetic bottle and field lines of opposite polarity, which leads to a tearing mode instability and a transfer of energy excess to thermal particles. A calculation of the growth time of the instability shows that particles will be observed before the flare particles appear. M.S.K.

SURFACE TEMPERATURE DETERMINATION FROM AN AMALGAMATION OF GOES AND TIROS-N RADIANCE MEASUREMENTS

J. A. ZANDLO, W. P. MENZEL (Wisconsin, University, Madison, WI), W. L. SMITH, and C. M. HAYDEN (Wisconsin, University; NOAA, National Earth Satellite Service, Madison, WI) Journal of Applied Meteorology, vol. 21, Jan. 1982, p. 44-50.

A technique for exploiting the TIROS-N capability of measuring the earth skin surface temperature and the GOES ability to monitor surface changes with fine temporal and horizontal resolution is described. Atmospheric absorption due to water vapor is assumed to vary slowly in space and time relative to the same scales of the GOES observations, thus allowing a horizontally varying correction field derived from 6-hr TIROS-N data to be used to obtain quasi-continuous surface temperature features from the GOES data. Additionally, a field of temperature differences between the corrected TIROS-N window channel brightness temperatures and uncorrected GOES brightness temperatures are specified. The GOES temperatures are then correctable to within six hours. Two examples are provided of regional temperature assessments with comparison with surface-measured data and accuracy with the satellite data is within 1 K. M.S.K.

DEVELOPMENT OF THREE-DIMENSIONAL SPATIAL DISPLAYS USING A GEOGRAPHICALLY BASED INFORMATION SYSTEM

B. G. JUNKIN (NASA, National Space Technology Laboratories, Earth Resources Laboratory, Bay Saint Louis, MS) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 577-586. refs

Procedures necessary for the development of a generalized three-dimensional perspective software capability in support of graphic, topographic, and color mapping of Landsat data are reviewed. The NASA Earth Resources Laboratory developed the procedures in order to facilitate the processing and analysis of disparate, geographically oriented base maps from aircraft and satellite sensors. Perspective displays are obtained through a translation of the space-viewed object to a vantage point coordinate system, followed by a rotation through two angles for alignment along the vantage line of sight, and finally a perspective transformation to yield two-dimensional displays with no hidden lines. Matrix equations for the transformations are reviewed, including scaling, and block diagrams are provided of the data and perspective software systems. The classification data plane may be mapped onto a topographic elevation data plane. M.S.K.

A82-29328

THE USE OF RESIDUAL IMAGES IN LANDSAT IMAGE ANALYSIS

D. L. B. JUPP and K. K. MAYO (Commonwealth Scientific and Industrial Research Organization, Div. of Land Use Research, Canberra, Australia) Photogrammetric Engineering and Remote Sensing, vol. 48, Apr. 1982, p. 595-604. refs

Methods of classification of Landsat data for interactive image display and analysis are reviewed, and the use of the residual image to improve the postclassification analysis is examined. The mean image is formed from an accumulation of the mean radiance values from four channels, while the residual image is generated in the form of pixels in terms of the difference between the class mean and the actual measured radiance. The residual image facilitates detection of departures from hierarchical classes and patterns. A reference model is developed to standardize residual images, and gains in texture analysis during visual analysis are noted with inclusion of the residual images. Examples are provided of land cover mapping an area in southeast Australia, and spectral class mapping on the northeast coast, where differences between inland and coastal vegetation are made visible using residual imagery. M.S.K.

A82-29409

DESCRIPTION OF GRAY LEVEL PICTURE USING A COLLECTION OF DENSITY CONTOUR LINES

T. AGUI, M. NAKAJIMA, and K. MATSUBARA (Tokyo Institute of Technology, Yokohama, Japan) Institute of Electronics and Communication Engineers of Japan, Transactions, Section E (English), vol. E 65, Jan. 1982, p. 36-43. refs

An extraction method of density contour lines of gray level pictures is described. Two kinds of quads composed of four image pixels and non-image pixels are defined for making the density contour lines simple closed paths. From the resultant density contour lines of simple closed paths, a tree graph is made for executing the recognition of a house included in a monochromatic aerial photo of an urban area. (Author)

EXTRACTION OF LINE SHAPED OBJECTS FROM AERIAL IMAGES USING A SPECIAL OPERATOR TO ANALYZE THE PROFILES OF FUNCTIONS

W.-D. GROCH (Karlsruhe, Universitaet, Karlsruhe, West Germany) Computer Graphics and Image Processing, vol. 18, Apr. 1982, p. 347-358. Research supported by the Bundesministerium fuer Forschung und Technologie and U.S. Army. refs

Line-shaped objects are extracted sequentially by object-guided and object-specific methods with the facility for interactive support. The line following starts at locations which reliably are part of line-shaped objects. Two different object-guided methods may be initialized at these starting points. The methods follow the object by applying special operators to extract line segments. The operator is described that analyzes the function profiles, the detection of starting points, the two methods for line following and the combination of all methods in a system for the extraction of line-shaped objects from discrete gray level pictures. Results of a test are shown. C.D.

DEPENDENT FEATURE TREES FOR DENSITY APPROXIMATION. I - OPTIMAL CONSTRUCTION AND CLASSIFICATION RESULTS

C. B. CHITTINENI (Conoco, Inc., Ponca City, OK) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 31-44. refs

This paper deals with the approximation of probability density functions with dependent feature trees. The optimal dependent feature trees are proposed to be constructed using criteria of mutual information and distance measures. Expressions are derived for the criteria when the distributions of the features are Gaussian. Expressions are developed for the covariances between the features connected by a path in a dependent feature tree. The case when the nodes in a dependent feature tree represent a set of features is also considered. Furthermore, experimental results from the classification of remotely sensed multispectral scanner imagery data are presented. (Author)

EVALUATION OF TEMPORAL REGISTRATION OF LANDSAT SCENES

R. NELSON and G. GREBOWSKY (NASA, Goddard Space Flight Center, Greenbelt, MD) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 45-50. refs

The registration of Landsat images is important for multitemporal classification and for detecting change. Landsat data are now rectified to a ground coordinate system during preprocessing, hence scenes obtained over the same area are registered. The machine responsible for preprocessing the Landsat multispectral scanner data is the master data processor (MDP). This paper describes the rectification approach taken by the MDP, reviews the accuracy standards of the resultant product, and provides an assessment of the accuracy of the scene to scene registration of two Landsat images. (Author)

THE USE OF CONTEXTUAL INFORMATION TO DETECT CUMULUS CLOUDS AND CLOUD SHADOWS IN LANDSAT DATA

C. M. GURNEY (Reading, University, Reading, England) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 51-62. Research supported by the Atomic Energy Research Establishment. refs

The use of contextual information to identify areas of cloud and cloud shadow in digital Landsat data is described. The distance from cloud to shadow is calculated from sun elevation and azimuth, cloud base height and image geometry. Pixels with a gray level above a given threshold are considered to be potential cloud. A 3 x 3 pixel window centered at the calculated shadow position is searched. Pixels in this window with gray levels below a second threshold are classed as cloud shadow. If no shadow pixels are found the potential cloud is rejected. Modifications to allow for overlapping cloud and shadow are included. The detection procedure was found to work well for bands 5, 6, or 7 of Landsat data. (Author)

THE ESTIMATION OF WAVE HEIGHT FROM DIGITALLY PROCESSED SAR IMAGERY

M. H. B. THOMAS (Atomic Energy Research Establishment, Materials Physics Div., Harwell, Oxon, England) International Journal of Remote Sensing, vol. 3, Jan.-Mar. 1982, p. 63-68. Research supported by the Department of Industry. refs

A simple method has been developed for estimating wave height from synthetic aperture radar (SAR) imagery obtained by the Seasat satellite. The method is based on measuring the contrast of the image and the wavelength of the dominant wave. A calculation has been made for two orbits made by the satellite over the North Atlantic in 1978, using digitally processed data supplied by DFVLR in West Germany. Comparison with sea truth measurements shows agreement to within about 20 per cent. (Author)

DIGITALLY ENHANCED VISUAL DISPLAYS FACILITATE THE ANALYSIS OF LANDSAT IMAGERY

R. N. COLWELL (Earth Satellite Corp., Berkeley, CA) In: Display technology II; Proceedings of the Meeting, Los Angeles, CA, February 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 118-126.

There have been efforts during most of the past decade to increase the interpretability of Landsat multispectral scanner (MSS) imagery through the performance of various kinds of image enhancement. Attention is given to research recently conducted for the U.S. Forest Service (USFS) with the objective to develop improved 'multiresource inventory methods' entailing the direct visual analysis of Landsat MSS imagery. The establishment of the resource categories to be identified is discussed along with approaches for producing the digitally enhanced visual displays, the preparation of the image analysis keys, the selection of personnel to evaluate the imagery, and the administration of the image interpretability tests. Preliminary results clearly showed that the studied procedure of enhanced visual display (color composite image in opaque print form) was significantly more interpretable than the conventional Landsat color composite imagery. G.R.

SUBTLETIES IN THE FLAT-FIELDING OF CHARGE-COUPLED DEVICE /CCD/ IMAGES
W. A. BAUM, B. THOMSEN, and T. J. KREIDL (Lowell Observatory, Flagstaff, AZ) In: Solid state imagers for astronomy; Proceedings of the Meeting, Cambridge, MA, June 10, 11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 24-27.
(Contract NAS5-25451; NAS5-25488)

Astronomical photometry with CCDs will often involve relatively low signal levels (less than 1000 charge carriers per pixel), at which nonlinear effects sometimes become significant. These effects will probably play a role in the processing of Space Telescope data. The problem apparently arises because signal charges are not read out equally completely from all columns and all pixels. It is shown that, although a first-order correction can be made by subtracting a low-level flat field from all frames before conventional processing, higher accuracy can be achieved by modeling the response with a nonlinear function. B.J.

COMPUTATION WITH PHYSICAL VALUES FROM LANDSAT DIGITAL DATA
C. J. ROBINOVE (U.S. Geological Survey, Reston, VA) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 781-784.

Although the analysis of Landsat digital images by using the digital numbers for each pixel recorded on a computer-compatible magnetic tape may be adequate when only a single, internally-consistent image is used, incorrect results will be given by the procedure if more than one image is used for analysis, as in mosaics or temporal overlays. The digital numbers for each pixel should in such cases be converted to their dimensionless equivalents, such as (1) radiance, as measured at the satellite, in mW/sq cm per steradian (sr), or (2) reflectance, both of which vary depending on the calibration of satellite MSS, sun angle, atmospheric state, terrain slope and aspect, and surface cover. Equations are given for radiance and reflectance calculations for the cases of five radiometric conditions, neglecting atmospheric correction. O.C.

GEOGRAPHIC LOCATION OF INDIVIDUAL PIXELS
D. C. MCCONAGHY (NOAA, National Marine Fisheries Service, La Jolla, CA) Remote Sensing of Environment, vol. 10, Aug. 1980, p. 81-84. refs

A major problem in processing thermal infrared digital data from very high resolution radiometers aboard NOAA Polar Orbiting Satellites is the geographic placement of digital data fields. Geographic placement is especially difficult over oceanic areas because of the lack of landmarks. Using a series of geometric constructions, an analytical approach can be developed for geographic location of individual data pixels. The errors associated with this method are generally less than 0.1 deg latitude and longitude. (Author)

THE USE OF PRIOR PROBABILITIES IN MAXIMUM LIKELIHOOD CLASSIFICATION OF REMOTELY SENSED DATA
A. H. STRAHLER (California, University, Santa Barbara, CA) Remote Sensing of Environment, vol. 10, Sept. 1980, p. 135-163. refs
(Contract NAS9-15509; NAS7-100; NSG-2377)

Possibilities for the improvement of classification accuracies by the use of prior information about the expected distribution of classes in the maximum likelihood classification of remote sensing data are examined. The modification of the maximum likelihood decision rule to take into account one or several sets of probabilities for the occurrence of classes which probabilities are based on independent knowledge of the area surveyed is demonstrated. It is then shown that the use of prior probabilities is sufficiently versatile so as to allow the prior weighting of output classes based on their anticipated sizes as well as the merging of continuously varying measurements with discrete collateral information data sets and the construction of time-sequential classification systems in which an earlier classification modifies the outcome of a latter one. A.L.W.

TERRAIN ANALYSIS FROM LANDSAT USING A COLOR TV ENHANCEMENT SYSTEM
T. H. L. WILLIAMS (Kansas, University, Lawrence, KS) and J. M. GOODMAN (Oklahoma, University, Norman, OK) Remote Sensing of Environment, vol. 10, Nov. 1980, p. 231-237.

Visual interpretation of Landsat false-color composite imagery was employed to map terrain types on the Navajo Indian Reservation in northeastern Arizona and northwestern New Mexico. Three main difficulties were encountered in the visual analysis: (1) determination of the exact boundary positions; (2) repeatability of the boundary decisions over an area; and (3) discrimination among subtle tone differences associated with certain terrain type groupings. A simple image enhancement technique, based on a color television system was developed to make the visual analysis more accurate. A color TV camera was used to view the image and a color monitor used for the display. Image enhancement was achieved by use of the chroma, hue, contrast, and brightness controls on the monitor. The use of a zoom lens on the camera allowed rapid scale change and facilitated study of small areas of the image. By working directly from a color image, the technique obviated the need for separation positives with their attendant registration problems. (Author)

APPEARANCE OF IRREGULAR TREE CANOPIES IN NIGHTTIME HIGH-RESOLUTION THERMAL INFRARED IMAGERY
L. K. BALICK and S. K. WILSON (Los Alamos National Laboratory, Los Alamos, NM) Remote Sensing of Environment, vol. 10, Dec. 1980, p. 299-305. refs

A82-34225
SEPARATION OF DIFFUSE FROM SHARP-EDGED FEATURES IN DIGITAL IMAGERY
G. F. BYRNE, P. F. CRAPPER, B. G. WILLIAMS, and M. J. GOODSPEED (Commonwealth Scientific and Industrial Research Organization, Div. of Land Use Research, Canberra, Australia) Remote Sensing of Environment, vol. 12, May 1982, p. 181-186. refs

A new classification procedure that removes sharp-edge features from digital imagery and that more clearly reveals any patterns more diffuse in nature that may be present is proposed. The procedure relies on the hypothesis that the sharp edges separate areas of uniform but differing optical density. These differences are frequently sufficiently large to obscure other patterns that are more diffuse ('fuzzy') in nature. The technique is illustrated by application to a Landsat scene where a suspected mosaic arising from soil variability is overlain by agricultural fields. C.R.

A82-34469
EVALUATION OF THE EFFECTIVENESS OF SYSTEMATIC IMAGE DISTORTION COMPENSATION [OTSENKA EFFEKTIVNOSTI KOMPENSATSII SISTEMATICHESKIKH ISKAZHENII IZOBRAZHENIIA]
N. G. BARABANOVA, K. N. GERTSENOVA, and S. S. NEKHIN
Geodeziia i Kartografiia, Apr. 1982, p. 32-36. In Russian.

The improvements in image accuracy afforded by two methods for the compensation of systematic distortions in aerial photographs are studied. The techniques of field calibration, which involves the correction of image coordinates by interpolation from the coordinates of selected calibration points, and polynomial correction using additional reference points, in which the distortion field is approximated by second- and third-degree polynomials, were applied to aerial photographs subject to four different types of distortions. Examination of the errors in the determination of the coordinates of control points and the maximum errors of their mutual positioning indicates field calibration to be more effective for sign-changing point displacements, while polynomial approximation is more effective for regular displacements. A.L.W.

A PRACTICAL STUDY OF GROSS-ERROR DETECTION IN BUNDLE ADJUSTMENT
S. F. EL-HAKIM (National Research Council, Ottawa, Canada) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 1-17. refs

A special bundle adjustment program has been developed with built-in automatic gross-error detector by the data snooping approach. The program computes, in an efficient way, the exact values of the redundancy numbers for each image point. Using actual data, many of the factors affecting the reliability of bundle adjustment and the ability of the technique to detect gross errors are studied. The effects of different block parameters, point type and location, and the use of additional constraints are presented. (Author)

A82-34717
AN INFORMATION-THEORIC SPATIAL TRANSFORM
J. S. POWERS (Mississippi State University, Mississippi State, MS) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 221-225. refs

Significant improvements in the sensitivity of existing computer algorithms for digital remote-sensor image classification may be effected without involving any software modification of these systems. An information-theoric spatial transform may be applied to the raw multispectral data set, and synthetic channels thus created may be utilized in the classification process. The transform is analogous in operation to the transform which occurs in the retina of higher organisms; a processing stage which has been omitted in most existing classification schemes. The transform algorithm is described and preliminary results of the application of the algorithm to the study of forest ecosystems from Landsat MSS image data are discussed. (Author)

BATHYMETRIC IMAGING
P. R. PALUZZI (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) and M. C. MALIN (Arizona State University, Tempe, AZ) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 247-258. refs
(Contract NAS7-100)

Digital topography has, for some years, been formatted and processed into shaded relief images for specific studies involving land use and thermal properties. Application to bathymetry is a new and seemingly fruitful extension of these techniques. Digital terrain models of the earth - combining subaerial topography with an extensive collection of bathymetric soundings - have been processed to yield shaded relief images. These images provide new and exciting insights into submarine geomorphology and portray many aspects of plate tectonic physiography in a manner not previously possible. (Author)

A82-34722
A QUANTITATIVE METHOD TO TEST FOR SIMILARITY BETWEEN PHOTO INTERPRETERS
R. G. CONGALTON and R. A. MEAD (Virginia Polytechnic Institute and State University, Blacksburg, VA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 263-266.

Photo interpretation is the art and science of identifying objects and deducing their significance on aerial photos. The judgment involved is generally qualitative in nature, and, therefore, difficult to evaluate or compare with interpretations made by others. The present investigation is concerned with an approach which makes it possible to quantify photo interpretation results, taking into account a statistical method for comparing these results. The proposed procedure can be employed in tests regarding the degree of similarity between interpreters or the consistency of the same interpreter over time. The procedure is based on the employment of an error matrix and the conduction of a discrete multivariate analysis to test the degree of similarity between the error matrices. G.R.

A82-34723
TERRAIN CLASSIFICATION BY FOURIER ANALYSIS - ACCURACY AND ECONOMY
P. FREDERIKSEN and O. JACOBI (Danmarks Tekniske Hojskole, Lyngby, Denmark) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 267-284. refs

The Fourier transformation is applied to terrain profiles for classification purposes. Areas with different geology are considered, and the power spectra are estimated. The spectrum is used to predict the accuracy of a digital terrain model and to calculate some economic consequences of the relation between type of terrain, accuracy of measurements, point density, and surveying expenses. PRESENT STATUS OF ON-LINE ANALYTICAL TRIANGULATION
V. KRATKY (National Research Council, Ottawa, Canada) Photogrammetria, vol. 38, May 1982, p. 1-12. refs

Basic principles of solutions suitable for analytical aerial triangulation are outlined and analyzed in the context of existing on-line photogrammetric systems. Two basic categories of procedures are considered: those which primarily aim for a quality controlled data acquisition followed by an off-line adjustment, and those which make the adjustment a part of the on-line procedure proper. The discussion covers geometrical as well as numerical considerations and emphasizes practical and methodological aspects which may bring about a higher efficiency of work and a reduction of preparatory operations. (Author)

INFLUENCE OF SKY RADIANCE DISTRIBUTION ON THE RATIO TECHNIQUE FOR ESTIMATING BIDIRECTIONAL REFLECTANCE

J. A. KIRCHNER (NASA, Goddard Space Flight Center, Earth Resources Branch, Greenbelt, MD), S. YOUKHANA, and J. A. SMITH (Colorado State University, Fort Collins, CO) Photogrammetric Engineering and Remote Sensing, vol. 48, June 1982, p. 955-959. refs

(Contract DACW39-77-C-0073; DARG29-79-C-0199)

The technique of ratioing scene radiance to the radiance obtained from standard Lambertian reference panels in order to estimate bidirectional reflectance factors may depend on the angular distribution of the diffuse irradiance field as well as the direct solar irradiance. A simulation study was performed to estimate the magnitude of this effect for differing clear sky irradiance distributions for a variety of vegetated surfaces. For the seven surfaces and wavelengths analyzed, the error induced in the estimation of bidirectional reflectance factors using the standard ratio technique was less than 5 percent for zenith view and sun angles less than 55 degrees. THE METEOROLOGICAL PRODUCT - 'CLOUD-TOP HEIGHT'

R. A. BOWEN (ESA, European Space Operations Centre, Darmstadt, West Germany) ESA Bulletin, no. 30, May 1982, p. 16-20.

The rationale for choices made in the method of presenting Meteosat IR and visual imagery to commercial users for visual analyses are examined. IR, at 11 microns, and water vapor (WV), at 6 microns, channels are noted to produce pictures in 2500 x 2500 pixel grids, while the 0.4-11 micron visible channel yields 5000 x 2500 pixel images. It was found necessary to digitally compress every picture by four in both directions for direct transmission to users. A resolution of 20 km was then available at the subsatellite point. Eight grey levels showed clouds above 12,000 m height in 1500 m steps to the 300 m level. A correction for the semitransparency of clouds is numerically determined, particularly for overlying cirrus formations. User-activated corrections to images from remote terminals is described. A time lag of a little over two hours existed between Meteosat-1 acquisition and dissemination. M.S.K.

SATELLITE RADIATION MEASUREMENTS FOR THE RETRIEVAL OF THE VERTICAL TEMPERATURE PROFILES [PRZETWARZANIE SATELITARNYCH POMIAROW PROMIENIOWANIA NA PIONOWE PROFILE TEMPERATUR]

Z. BUNSCH-MAKAREWICZ, B. BRAUN, and R. GOSS-ZUREK Acta Geophysica Polonica, vol. 29, no. 3, 1981, p. 235-246. In Polish. refs

The physical basis underlying satellite IR determination of vertical temperature profiles in the atmosphere is detailed. The earth is treated as a black-body emitting radiation at temperatures dependent only on the concentration, temperature, and absorption coefficient of the absorbents present in the atmosphere. Consideration is given to regression analysis, the inverse matrix method, and direct retrieval techniques, noting that regression is preferred as the first choice in all cases and is the only method when transmission properties are not known. The level of agreement between derived profiles and measured values is shown to depend on the number of spectral frequency measurements. Good correlations are found, with the in situ data being slightly higher than the satellite figures. Examples are cited from TIROS N and NOAA spacecraft data. M.S.K.

A82-37048

DESIGN GUIDELINES FOR SATELLITE IMAGE DATA DISTRIBUTION SYSTEMS

D. L. HALL, K. H. MILLER, W. T. BISIGNANI, and J. W. VERA (Mitre Corp., McLean, VA) In: EASCON '81; Electronics and Aerospace Systems Conventions, Washington, DC, November 16-19, 1981, Record. New York, Institute of Electrical and Electronics Engineers, Inc., 1981, p. 328-337.

A modular, systems level design for satellite systems which produce images is presented. This is a three-stage, ten-step iterative design technique which applies to the data flow from the sensing instruments through the processing system to the image product users. Procedures for converting operational requirements into functional architectures are described. The resulting architectures are translated into a subsystem level design by using an array of building blocks. An important feature of this structured approach is the parametric characterization of the interfaces between building blocks. B.J.

LANDSAT D TO YIELD MORE PRECISE DATA

C. COVAULT Aviation Week and Space Technology, vol. 117, July 5, 1982, p. 40, 41, 46-48, 51.

The Landsat D spacecraft to be launched in mid 1982 will offer new multispectral and thermal imaging capabilities. The satellite is designed to improve the monitoring of renewable resources and to provide rock discrimination data for mineral and pertroleum geologists. The expanded features of the new satellite include a seven-band thematic mapper with spectral ranges from 0.45-0.52 microns to 2.08-2.35 microns and a multispectral scanner capable of higher resolution and spectral fidelity than used in previous Landsats. The development of the Landsat D has been complicated by project changes both in the Space Shuttle and the Tracking and Data Relay Satellite Program, which resulted in an increase in weight (now 4400 lb.), an additional hydrazine tank and narrow band tape recorders. Other details on the spacecraft include total array output power of 2200 W, operational altitude of 705 km and launching on a Delta 3920. N.B.

ADVANCED TECHNOLOGY FOR EARTH OBSERVATION - DATA PROCESSING
P. HEFFNER and E. CONNELL (NASA, Goddard Space Flight Center, Mission and Data Operations Directorate, Greenbelt, MD) American Astronautical Society and Deutsche Gesellschaft fuer Luft- und Raumfahrt, Goddard Memorial Symposium on Spacelab, Space Platforms and the Future, 20th, Greenbelt, MD, Mar. 17-19, 1982, AAS 18 p.
(AAS PAPER 82-130)

The Experimental Land Observing System (ELOS) is to demonstrate major advances in space-based land observation. Program success will depend upon successful demonstration of both space-segment performance and ground-system capabilities. Increases in data-rate, volume, and processing requirements present substantial challenges to the ground data processing system. ELOS is based on the utilization of the multispectral linear array (MLA) sensor, a solid-state, electronically scanned instrument. Current MLA instrument designs offer a number of capabilities beyond those provided in the Landsat imaging devices. These capabilities include greater resolution, inherent registration, onboard calibration, off-nadir pointing capability, and fore/aft pointing capability. The proposed MLA flight mission scenario will be one of continued growth and will include flights on the Space Transportation System. Attention is also given to ground-to-ground data transport, data capture, and the use of high speed computers. G.R.

STUDIES OF HIGH LATITUDE CURRENT SYSTEMS USING MAGSAT VECTOR DATA Progress Report, 16 Nov. 1980 - 31 Aug. 1981
J. R. BURROWS, Principal Investigator, T. J. HUGHES, D. D. WALLIS, and M. D. WILSON 31 Aug. 1981 19 p Sponsored by NASA ERTS
(E82-10188; NASA-CR-168616; NAS 1.26:168616; PR-3) Avail: NTIS HC A02/MF A01 CSCL 04A

The magnetic disturbance fields caused by global external current systems are considered with particular emphasis on improving the understanding of the physical processes which control high latitude current systems. Following processing the MAGSAT data were routinely plotted in the Universal Time (UT) format as well as in a polar plot format. The H'D'U' coordinate system, was adopted as the standard for representing the MAGSAT residual magnetic field vectors. A data file was generated and the TPOLAR computer code was developed to determine from the orbital elements, the time, latitude, and MLT of the extremum latitude of each transpolar segment of orbit. The precision of the vector data set from MAGSAT prompted an extended exploratory phase for data analysis procedures, modeling techniques and phenomenology. A.R.H.

EQUIVALENT SOURCE MODELING OF THE MAIN FIELD USING MAGSAT DATA Quarterly Report, 1 Jan. - 31 Mar. 1981
31 Mar. 1981 4 p ERTS
(Contract NAS5-26047)
(E82-10151; NASA-CR-168536; NAS 1.26:168536; QR-5) Avail: NTIS HC A02/MF A01 CSCL 05B

Modeling and software development of the main field using MAGSAT data is discussed. The cause of the apparent bulge in the power spectrum of Dipole model no. 4 was investigated by simulation with POGO crustal anomaly field model. Results for cases with and without noise, and the spectra of selected resits are given. It is indicated that the beginning of the bump in the spectrum of Dipole no. 4 is due to crustal influence, while the departure of the spectrum from that of MGST (12/80-2) around expansion order 17 is due to the resolution limits of the Dipole density. ANALYSES OF MAGSAT TRACKS CROSSING THE STUDY REGION IN THE INDIAN OCEAN Quarterly Progress Report, 2 Dec. 1980 - 31 Mar. 1981
R. V. SAILOR and A. R. LAZAREWICZ, Principal Investigators 7 May 1981 15 p ERTS
(Contract NAS5-26424)
(E82-10197; NASA-CR-168624; NAS 1.26:168624; PR-1325-1) Avail: NTIS HC A02/MF A01 CSCL 05B

Progress in software development and in preliminary analysis of MAGSAT tracks crossing the Indian Ocean is reported. Tracks crossing the Java Trench, Broken Ridge, the Southeast Indian Ridge, and the Ninetyeast Ridge show that magnetic anomalies correlate with some of these features. Preliminary study of anomaly profiles indicates that tracks of anomaly data (the observations minus a core field model) have a power spectrum decreasing as the inverse square of the spatial frequency. An apparent noise floor of about one to two gammas rms is reached at wavelengths of about 360 km, corresponding to approximately 10 samples of the decimated Investigator tape data at a sampling rate of approximately 4.9 sec/sample. J.D.

INVESTIGATION OF MAGSAT AND TRIAD MAGNETOMETER DATA TO PROVIDE CORRECTIVE INFORMATION ON HIGH-LATITUDE EXTERNAL FIELDS Progress Report, 1 Jul. - 30 Sep. 1981
T. A. POTEMRA, Principal Investigator 4 Nov. 1981 10 p Sponsored by NASA Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 ERTS
(E82-10201; NASA-CR-168628; NAS 1.26:168628) Avail: NTIS HC A02/MF A01 CSCL 04A

The compilation of a catalog of the MAGSAT-observed high altitude disturbances is discussed and an example of contents and format is given. The graphs allow the investigation of Birkeland current signatures which are superimposed upon the main geomagnetic field. An example of a display of the MAGSAT orbital tracks in a polar geomagnetic coordinate system with the locations, flow directions, and intensities of field aligned currents shown in color is also given. The display was generated using an interactive color graphics terminal. M.G.

REGISTRATION OF HEAT CAPACITY MAPPING MISSION DAY AND NIGHT IMAGES
K. WATSON, S. HUMMER-MILLER, and D. L. SAWATZKY, Principal Investigators 1982 17 p refs Submitted for publication Sponsored by NASA Original contains imagery. Original imagery may be purchased from NASA, Goddard Space Flight Center, (code 601), Greenbelt, Md. 20771. Domestic users send orders to 'Attn: National Space Science Data Center'; non-domestic users send orders to 'Attn: World Data Center A for Rockets and Satellites'. HCMM
(E82-10210; NASA-CR-168773) Avail: NTIS HC A02/MF A01 CSCL 05B

Neither iterative registration, using drainage intersection maps for control, nor cross correlation techniques were satisfactory in registering day and night HCMM imagery. A procedure was developed which registers the image pairs by selecting control points and mapping the night thermal image to the daytime thermal and reflectance images using an affine transformation on a 1300 by 1100 pixel image. The resulting image registration is accurate to better than two pixels (RMS) and does not exhibit the significant misregistration that was noted in the temperature-difference and thermal-inertia products supplied by NASA. The affine transformation was determined using simple matrix arithmetic, a step that can be performed rapidly on a minicomputer. A.R.H.

(Contract NAS9-15466; PROJ. AGRISTARS)
(E82-10213; NASA-CR-167508; NAS 1.26:167508; LARS-101481; SR-P1-04194) Avail: NTIS HC A09/MF A01 CSCL 02C

An algorithm is proposed which predicts the optimal features at every node in a binary tree procedure. The algorithm estimates the probability of error by approximating the area under the likelihood ratio function for two classes and taking into account the number of training samples used in estimating each of these two classes. Some results on feature selection techniques, particularly in the presence of a very limited set of training samples, are presented. Results comparing probabilities of error predicted by the proposed algorithm as a function of dimensionality as compared to experimental observations are shown for aircraft and LANDSAT data. Results are obtained for both real and simulated data. Finally, two binary tree examples which use the algorithm are presented to illustrate the usefulness of the procedure. Author

NONLINEAR THEORY FOR ELASTIC BEAMS AND RODS AND ITS FINITE ELEMENT REPRESENTATION
J. F. BESSELING Oct. 1981 25 p refs
(WTHD-143) Avail: NTIS HC A02/MF A01

Expressions for large curvatures of elastic beams and rods are given in terms of displacement components and angular coordinates. The application of these expressions to bifurcation and stability problems, based on the principle of virtual work is discussed. This approach is compared with another finite element representation, and an error in this representation is corrected. The condition of zero extension of the axis in the case of the Euler column is shown to require division into a large number of finite elements in order to ensure an accurate result for the stability coefficient. The conditions of zero extension of the axis and zero curvature about one principal axis of the cross section in the case of the lateral buckling of the end loaded cantilever have similar consequences. MODELS AND MAPS OF THE MAIN FIELD Progress Report
J. L. LEMOUEL, Principal Investigator, C. GIRE, and J. DUCRUIX 1 Apr. 1982 13 p refs Sponsored by NASA ERTS
(E82-10327; NASA-CR-168906; NAS 1.26:168906) Avail: NTIS HC A02/MF A01 CSCL 08B

The difference between the models comes from the difference in the procedures of data selection and depends on the aim the model is intended for: regional studies necessitates locally higher density of data and for downward continuation the reduction of external variations must be as careful as possible. Refinements of preliminary models MAGP1 and MAGP2 are presented. Models MAGP1 and MAGP2 are found to have drawbacks coming from insufficient reduction of the external variations and from the inhomogeneity in the distribution of the measurement points. New analysis was performed to overcome these shortcomings. The quality of the new models is characterized by the average rms of the differences measurement model. T.M.

This technical report summarizes the image understanding and VLSI system research activities performed by the University of Southern California and the Hughes Research Laboratories during 1 April 1981 through 30 September 1981 under contract number F-33615-80-C-1080 with the Defense Advanced Research Projects Agency, Information Processing Techniques Office. The purpose of this research program is to develop techniques and systems for understanding images, particularly for mapping applications. The research activity includes low level image analysis and feature extraction, statistical and structural texture analysis, symbolic image representations, and image to map correspondence using relational structures. Additional activity is concerned with VLSI architectures for implementation of image analysis and image understanding operations. GRA

The Defense Mapping Agency produces digital data bases that describe the physical appearance of the surface of the Earth. These data bases include, but are not limited to, terrain elevation, culture including landscape characteristics and vertical features. This data is collected from digitized source maps, from optically or digitally correlated stereo-pairs of photographic imagery, and from digital multi-spectral sensor data. A dramatic impact has been made in the ability to analyze these digital data bases by applying state-of-the-art digital image technology processing and display concepts. These include a variety of color and/or black and white displays of not only intensity/color coded matrix data, but also image processed data using specialized convolution filters, texture discrimination, and special color representation techniques. In addition, computer generated imagery from these data bases serves as a final analysis tool. GRA

An inadequate concept of how corresponding points relate to one another on dissimilar images has a greater effect than exposure geometry or data collection on registration problems in stereo photogrammetry. Conventional correlation, or one of its relatives, is the measure of similarity used in all automated stereo correlation systems. Correlation, a measure of the linear dependence between two sets of data, is an inadequate measure when there is less than, or more than, a moderate amount of image structure at and around points selected for image matching. The existence of structure should be recognized and utilized in an appropriate manner for image matching. Similarly, the absence of structure should be recognized, and the surrounding imagery should be used to complete matches where it is possible. The concurrent determination of what a pixel is, as well as where it is, can alleviate much of the registration problem. A variety of features including point-density data, texture, and edges, as well as existing cartographic knowledge, can be combined and organized through rules in order to more completely describe a point. The overall throughput of the compilation process will be improved in both time and accuracy if those functions which tend to support one another are concurrently, rather than sequentially, performed. If the compilation process takes place in image space, then the image matching operation as well as the other feature extraction operations, can be ordered by the data processing manager to best suit the function of the process. This report describes the possible uses of higher resolution (25 meter) space-derived images for delineating and measuring surface features of interest in the Corps of Engineers' Civil Works Program. Following a discussion of imaging sensors and computer processing methods, test evaluations are described in which LANDSAT multispectral scanner data and SEASAT SAR data were interpreted for surface features. The comparative advantages of the two data sources are discussed, and the complementary nature of LANDSAT MSS and SEASAT SAR images is displayed in the image analyses. Image examples are included for both background discussion and test site evaluation. Author (GRA)

IS THE NEON COMPOSITION OF OUR SUN, PLANETARY OR SOLAR

M. N. RAO, C. M. NAUTIYAL, and T. R. VENKATESAN (Physical Research Laboratory, Ahmedabad, India) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 141-144. refs

The surficial solar wind from the feldspar grain-size separates of lunar soils is removed by selective chemical etching to determine whether the long term average solar flare Ne composition is planetary or solar. Mineral residues mostly containing solar flare implanted noble gas components are analyzed by step wise gas release mass spectrometric methods. Results do not show any major differences in the Ne ratios of solar flares and solar wind, and the long term average composition of low energy solar flares implanted Ne is similar to solar wind neon instead of planetary, although variations of Ne isotopic ratios in solar flares over short time scales is not ruled out. D.L.G.

A82-29541

AN INFRARED EXPOSURE METER

R. W. DANA (U.S. Forest Service, Fort Collins, CO) In: Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981. Falls Church, VA, American Society of Photogrammetry, 1981, p. 145-156. refs

It is noted that, since the commonly used color infrared aerial film has less latitude to variations in scene brightness than most normal color films, camera exposure adjustment is crucial in the infrared aerial photography of natural resources. A description is given of a spotmeter sensitive in the wavelength band of infrared films developed to aid the aerial photographer in adjusting camera settings for optimum exposure of a variety of scenes. Also discussed are airborne tests undertaken to evaluate the meter for agricultural, forest, and range cover. The problems encountered in using photographic photometry to evaluate luminance readings from a hand-held instrument fall into three groups: instrument pointing problems, film sensitometry, and camera calibration. The optimum exposure for quantitative density analysis is thought to be about three-fourths of a stop lower than for visual interpretation. The results of regression analysis suggest that the infrared meter marks an improvement over conventional spotmeters in predicting the infrared response of the film. C.R.

THERMOGRAPHY - A REMOTE SENSING METHOD WITH MANY PERSPECTIVES [THERMOGRAFIE - EINE PERSPEKTIVREICHE FERNERKUNDUNGSMETHODE]

A. GESCHKE (Gesellschaft fuer Internationalen Flugverkehr mbH, Berlin, East Germany) Technisch-oekonomische Information der zivilen Luftfahrt, vol. 17, no. 4, 1981, p. 169-171. In German.

Thermography, as considered in this report, is concerned with the utilization of the electromagnetic radiation of the far-infrared region for the formation of images. Possibilities for such a utilization improved greatly with the development of cooled semiconductor sensing devices during the last twenty years. Thermographs were designed as far-infrared image-forming devices which provide a thermal photograph by scanning a far-infrared image of an object or a scene. A description is provided of investigations in which such devices, carried on board of a helicopter or a fixed-wing aircraft, were used to obtain thermal images of an area on the ground. Thermography is found to be a valuable approach for the study of energetic aspects, geologic structures, groundwater budget questions, the vitality of forests and agricultural areas, and water pollution. LARGE AMPLITUDE UNDULATIONS ON THE EQUATORWARD BOUNDARY OF THE DIFFUSE AURORA

A. T. Y. LUI, C.-I. MENG, and S. ISMAIL (Johns Hopkins University, Laurel, MD) Journal of Geophysical Research, vol. 87, Apr. 1, 1982, p. 2385-2400. refs

(Contract AF-AFOSR-79-0010; NSF ATM-79-23240; NSF ATM-79-25987)

A description is presented of the first observation of large scale undulations in the equatorward boundary of the diffuse aurora by pictures of global auroral displays in the afternoon-evening sector. These observations are made by a broad band scanning radiometer on the Defense Meteorological Satellite Program (DMSP) satellites. Attention is given to four periods during which the equatorward boundary of the diffuse aurora is undulated. Three of these are taken in the southern polar region and one in the northern polar region. The duration of the undulations is considered along with geomagnetic and interplanetary conditions. All undulations are found to occur during the period of a geomagnetic storm near the peak development of the storm-time ring current. All are accompanied by substorm patterns of discrete auroras. G.R.

A82-31020

EXTREMELY HIGH LATITUDE AURORAS

M. S. GUSSENHOVEN (Boston College, Chestnut Hill, MA) Journal of Geophysical Research, vol. 87, Apr. 1, 1982, p. 2401-2412. refs

(Contract F19628-81-K-0032; AF-AFOSR-79-0012)

It is pointed out that imaging devices on the polar orbiting ISIS and Defense Meteorological Satellite Program (DMSP) satellites have greatly increased the extent of polar cap and auroral zone coverage and have prompted several studies of polar cap arcs. A description is presented of a statistical study of the occurrence conditions for arcs recorded in DMSP images at extremely high latitudes, taking into account corrected geomagnetic latitudes equal to or greater than 80 deg. The 80 deg boundary is chosen to minimize the problems associated with defining a polar cap boundary. Attention is given to the data base and categorization of extremely high latitude auroras, the relationship to magnetic activity, and the relationship to solar wind conditions. It is found that one category of extremely high latitude auroras is distinctly different from the rest. This category includes the oval auroras which expand poleward in the midnight sector. G.R.

A82-31991

A SYSTEM DESIGN FOR A MULTISPECTRAL SENSOR USING TWO-DIMENSIONAL SOLID-STATE IMAGING ARRAYS

R. M. HODGSON (Canterbury, University, Christchurch, New Zealand), F. M. CADY (Montana State University, Bozeman, MT), and D. PAIRMAN (Department of Scientific and Industrial Research, Physics and Engineering Laboratories, Lower Hutt, New Zealand) IEEE Transactions on Geoscience and Remote Sensing, vol. GE-20, Apr. 1982, p. 177-179. Research supported by the University of Canterbury and University Grants Committee. refs

A system developed for remote sensing from light aircraft in the 400-1100 nm wavelength range possesses an architecture which permits the simultaneous capture of up to four images from solid-state, two-dimensional image sensors. In operation, the array sensor captures a series of relatively rapid, approximately 10 msec exposures at intervals as long as 10 sec. This mode of operation has the advantage of nearly the same degree of distortion due to aircraft roll in all image elements. The software generation of sensor drive signals is incorporated in the system. O.C.

IMAGING SPECTROSCOPY; PROCEEDINGS OF THE SEMINAR, LOS ANGELES, CA, FEBRUARY 10, 11, 1981

D. D. NORRIS, (ED.) (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA) Seminar sponsored by SPIE - The International Society for Optical Engineering. Bellingham, WA, SPIE - The International Society for Optical Engineering (SPIE Proceedings. Volume 268), 1981. 204 p. MEMBERS, $34.; NONMEMBERS, $40

The seminar concentrated on the science applications of spectral imaging, multispectral imaging sensors, and spectral filtering. Papers are presented on spectroscopic remote sensing for geological applications, spectral mapping of Jupiter, system design of an interferometer imaging sounder and a common module imaging spectral radiometer. Other topics discussed include the performance and application of an intensified linear self-scanned array instrument, tunable optical filtering using an interferometer for selective modulation, design studies for a spectrally agile staring sensor system, and acousto-optic tunable filters for high-resolution spectral analysis. THEMATIC MAPPER - AN OVERVIEW OF SPECTRAL BAND REGISTRATION

W. H. FREUDENSTEIN (Santa Barbara Research Center, Goleta, CA) In: Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10,11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 50-63.
(Contract NAS5-24200)

The Thematic Mapper (TM) is a high-resolution radiometer designed for earth resources classification and mapping. The TM employs multispectral scanning in a near polar orbit to sweep a 185-km swath. Data are obtained through a combination of spacecraft motion and the sweeping action of the scan mirror. These data are transmitted either directly to ground stations around the world or through a relay to the central data processing facility at White Sands, NM. Seven spectral passbands are employed, and applications include coastal water mapping, soil vegetation differentiation, biomass surveys, water body delineation, vegetation moisture measurement, plant heat stress management, and hydrothermal mapping. Attention is given to the scan mirror assembly, scan nonlinearities, the characterization and compensation of scan profiles, experimental performance, and a procedure for midscan correction. G.R.

MULTISPECTRAL MAPPER - IMAGING SPECTROSCOPY AS APPLIED TO THE MAPPING OF EARTH RESOURCES

J. B. WELLMAN (California Institute of Technology, Jet Propulsion Laboratory, Observational Systems Div., Pasadena, CA) In: Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10,11, 1981. Bellingham, WA, SPIE - The International Society for Optical Engineering, 1981, p. 64-73. refs
(Contract NAS7-100)

An instrument concept that uses solid-state array imaging has been developed for a future land observing system. The design concept is responsive to a variety of use needs and provides improved capabilities over the planned Landsat Thematic Mapper. A comparison of the differing approaches to the instrument design was made, resulting in the selection of a concept which uses a spectrograph coupled to a line-array imager to provide simultaneous spatial and spectral resolution. The design provides an inherent solution to the problem of achieving precise registration among the spectral bands. Data processing on the focal plane is used to select the spectral bands and their band widths. Onboard capabilities include radiometric correction, selection of instantaneous field-of-view and swath width, and data compression. (Author)

INVERSION OF DATA FROM DIFFRACTION-LIMITED MULTIWAVELENGTH REMOTE SENSORS. II - NONLINEAR DEPENDENCE OF OBSERVABLES ON THE GEOPHYSICAL PARAMETERS

P. W. ROSENKRANZ (MIT, Cambridge, MA) Radio Science, vol. 17, Jan.-Feb. 1982, p. 245-267. refs
(Contract NAS5-22929; NAG5-10)

Linear shift-invariant spatial filtering is applied to inversion of radiometric measurements of the earth in both polarizations at the following frequencies: 6.6, 10.7, 18, 21, and 37 GHz. For purposes of radiative transfer calculations at these frequencies, the state of the ocean-atmosphere system is described by a seven-parameter model. The parameters are near-surface wind speed, sea surface temperature, integrated water vapor mass, scale height of water vapor in an exponential distribution, integrated liquid water mass, height of the liquid water, and characteristic drop radius in a Best (1950) drop size distribution. Also described is a spatial filtering algorithm by means of which geophysical parameters are retrieved from measurements made over the ocean by the scanning multichannel microwave radiometer on the Nimbus 7 satellite. The parameters here are near-surface wind speed, sea surface temperature, rain rate, integrated atmospheric water vapor content, and integrated liquid water content (including rain). C.R.

PHOTOGRAMMETRIC METHODS FOR MAPPING RESOURCE DATA FROM HIGH ALTITUDE PANORAMIC PHOTOGRAPHY

R. L. LISTON (U.S. Forest Service, Washington, DC) Photogrammetric Engineering and Remote Sensing, vol. 48, May 1982, p. 725-732. refs

Characteristics of the Itek KA-80A optical bar panoramic camera are discussed. Two computer based mapping systems designed to correct for variations in photo scale are described. Panoramic Grid (PANGRID) is a computer program that creates a panoramic

image overlay of an equal area grid assumed to lie on flat ground. The Photographic Mapping System (PMS) provides for the generation of both map registered grid overlays and mapping of digitized point, line, and polygon data. Both programs make use of single frame resection techniques and digital terrain data.

AN OPTICAL OBJECTIVE LENS FOR EARTH OBSERVATIONS BY SATELLITES [UN OBJECTIF OPTIQUE POUR L'OBSERVATION DE LA TERRE A PARTIR DE SATELLITES]
E. MATHIEU (Wild Heerbrugg AG, Heerbrugg, Switzerland), E. SEIN (Centre National d'Etudes Spatiales, Centre Spatial de Toulouse, Toulouse, France), and J.-P. DURPAIRE (ESA, Toulouse, France) ESA Journal, vol. 6, no. 1, 1982, p. 71-81. In French. European Space Agency
(Contract ESA-4422/80)

The features and performance of objective lenses intended for transmission of optical images of the earth to deposition on the detectors of CCDs onboard the ESA land application satellite system/optical imaging instrument are described. Trials to determine satisfactory durability for space-based uses are reviewed. The lenses were required to have an angular field of 16 deg, a 105 mm aperture, cover the spectral bands 0.6, 0.69, 0.8, and 0.9 micron, the panchromatic band from 0.52-0.9 micron, have a focal distance to within 3 mm of 567 mm, cause less than 1 percent distortion in the image size, and less than 1.5 micron error in the spectral domain. Other requirements were for a 0.75 transmittance, polarization less than 1 percent, and a modulation transfer function close to theoretical limits, which was realized at less than 1 mm. The objective produced will have a resolution of around 15 m at the earth's surface from an orbit of 681 km and a total field of view of 167 km.

A82-32912
QUANTITATIVE RELATIONSHIPS OF NEAR-SURFACE SPECTRA TO LANDSAT RADIOMETRIC DATA
S. E. MARSH and R. J. P. LYON (Stanford University, Stanford, CA) Remote Sensing of Environment, vol. 10, Dec. 1980, p. 241-261. Research supported by the U.S. Geological Survey. refs

It is shown that for typical homogeneous and moderately heterogeneous terrains, the number of samples required for estimating the mean reflectance of a pixel is small. No more than 9-20 samples are required to be within 2% reflectance at the 95% probability level. Coincident field measurements and satellite observations are used to test the equivalency and correlation of the reflectance data. It is noted that, before the Landsat data could be compared with the surface measurements, the satellite brightness values had to be converted to absolute radiometric units and corrected for atmospheric attenuation and scattering. A conversion method using a standard/target comparison, which indirectly compensates for atmospheric attenuation and scattering, produces a Landsat equivalent reflectance exhibiting a root-mean-square error of + or - 4% reflectance (compared with the surface measured value at 12 test sites).

SNOWPACK MONITORING IN NORTH AMERICA AND EURASIA USING PASSIVE MICROWAVE SATELLITE DATA
J. L. FOSTER, A. RANGO, D. K. HALL, A. T. C. CHANG, L. J. ALLISON, and B. C. DIESEN, III (NASA, Goddard Space Flight Center, Greenbelt, MD) Remote Sensing of Environment, vol. 10, Dec. 1980, p. 285-298. refs

Areas of the Canadian high plains, the Montana and North Dakota high plains, and the steppes of central Russia have been studied in an effort to determine the utility of spaceborne microwave radiometers for monitoring snow depths in different geographic areas. Significant regression relationships between snow depth and microwave brightness temperatures were developed for each of these homogeneous areas. In each of the study areas investigated in this paper, Nimbus-6 (0.81 cm) ESMR data produced higher correlations than Nimbus-5 (1.55 cm) ESMR data in relating microwave brightness temperature to snow depth. It is difficult to extrapolate relationships between microwave brightness temperature and snow depth from one area to another because different geographic areas are likely to have different snowpack conditions.

INFERENCE OF REFRACTIVITY PROFILES BY SATELLITE-TO-GROUND RF MEASUREMENTS
K. D. ANDERSON (U.S. Naval Ocean Systems Center, San Diego, CA) Radio Science, vol. 17, May-June 1982, p. 653-663. refs

A technique is described to infer an estimate of the tropospheric radio refractive index distribution from earth-based observations of a satellite-born beacon. This technique, known as the direct inference technique (DIT) predicts the refractivity profile by comparing the observed interference pattern, created as the satellite moves through low elevation angles, to patterns generated from a family of assumed refractivity profiles. It is shown that DID correctly predicts the ducting environment for 12 of 22 satellite-to-ground RF measurements made during July and August 1978. Although the inferred profile geometry can differ significantly from the refractivity profile measured by an upper air sounding, the technique is moderately successful in predicting whether the true profile contains a ground-based or elevated duct. However, the overall reliability of predicting the dominant features of the duct (e.g., refractive gradient through the trapping layer, top height of the duct) is not adequate for operational usage. IRRADIANCE MEASUREMENT ERRORS DUE TO THE ASSUMPTION OF A LAMBERTIAN REFERENCE PANEL

D. S. KIMES and J. A. KIRCHNER (NASA, Goddard Space Flight Center, Earth Resources Branch, Greenbelt, MD) Remote Sensing of Environment, vol. 12, May 1982, p. 141-149. refs

A technique is presented for determining the error in diurnal irradiance measurements that results from the non-Lambertian behavior of a reference panel under various irradiance conditions. Spectral biconical reflectance factors of a spray-painted barium sulfate panel, along with simulated sky radiance data for clear and hazy skies at six solar zenith angles, were used to calculate the estimated panel irradiances and true irradiances for a nadir-looking sensor in two wavelength bands. The inherent errors in total spectral irradiance (0.68 microns) for a clear sky were 0.60, 6.0, 13.0, and 27.0% for solar zenith angles of 0, 45, 60, and 75 deg, respectively. The technique can be used to characterize the error of a specific panel used in field measurements, and thus eliminate any ambiguity of the effects of the type, preparation, and aging of the paint. TECHNICAL AND ECONOMICAL CHARACTERISTICS OF THE AFA-TES-10M AERIAL CAMERA [TEKHNIKO-EKONOMICHESKIE POKAZATELI AEROFOTOAPPARATA AFA-TES-10M]

A. G. VANIN Geodeziia i Kartografiia, Apr. 1982, p. 36-39. In Russian. refs

The technical characteristics and economics of the AFA-TES-10M aerial camera are compared with those of the AFA-TES-100M camera which it replaces. Although a focal length of 100 mm makes both suitable for large-scale cartography, the newer camera, which makes use of a Russar-71 objective, exhibits reduced objective distortion and increased resolution in comparison with the AFA-TES-100M. A shorter operating cycle and an extended exposure range also allow a wider applicability and greater effectiveness in large-scale cartography. Analysis of the costs involved in producing topographic maps of a rolling terrain at various scales by the AFA-TES-10M indicates an overall savings as a result of reductions in labor costs, the amount of field validation and cameral photogrammetric processes required and specific capital investment, as well as an increase in the productivity of survey work. Development costs of the new system would be recovered typically in two years. A.L.W.

A82-34471

ANALYTICAL PROCESSING OF PHOTOGRAPHS TAKEN BY PAIRED CAMERAS [ANALITICHESKAIA OBRABOTKA FOTOSNIMKOV, POLUCHENNYKH SPARENNYMI FOTOKAMERAMI]

G. P. KUDRIAVTSEV Geodeziia i Kartografiia, Apr. 1982, p. 39-41. In Russian.

The use of direct analytical methods for the processing of photographs taken simultaneously by pairs of cameras with parallel optical axes mounted on a moving airborne or ground vehicle is examined. A method is presented whereby the angular and linear components of the external orientation of a stereo model may be computed from the positions of three reference points visible on each of the photographs, and then used to derive the geodesic coordinates. A computer algorithm based on the method has been used to derive a topographic layout of the geometrical elements and transverse and longitudinal profiles of a road based on strip photography taken by a camera pair mounted on a moving automobile. A.L.W.

IMAGE PROCESSING WITH MICROCOMPUTERS IN REMOTE SENSING

F. M. CADY (Montana State University, Bozeman, MT) and R. M. HODGSON (Canterbury, University, Christchurch, New Zealand) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 140-149. refs

A description is given of a digital image processing system which has proved to be useful in a number of application areas. In connection with the employment of a relatively low resolution sensor, it was possible to use relatively inexpensive computing components, memory, and bulk storage devices. The speed of operation for a wide range of application programs was high enough to allow the system to be useful for interactive image processing. The experience gained with the aid of the considered system indicates that similar results can be obtained with higher resolution arrays by utilizing higher performance, new generation microprocessors. The discussed system is based on the use of an eight-bit microprocessor with an addressing space of 65,536 locations. G.R.

A82-34724

SENSITOMETRY IN CANADIAN AERIAL SURVEY

P. D. CARMAN (National Research Council, Ottawa, Canada) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 285-295. refs

Since 1943, sensitometric control of the processing of aerial negatives has been used by the Royal Canadian Air Force (RCAF) in connection with the performance of its task to provide aerial photography for Canada. The sensitometers used by the RCAF suffered from a variety of problems which, however, could be overcome by making use of repair and recalibration facilities. The transfer of aerial photography assignments from the RCAF to a number of private companies in the 1950's made it appear desirable to employ sensitometers which could perform reliably without easy access to specialized repair facilities. Attention is given to a sensitometer which was designed to satisfy these requirements. The design features of the new instrument are discussed, taking into account the light source, the spectral quality of illumination, the shutter, and the electrical supply. Aspects of sensitometer calibration and verification are considered along with the uses of sensitometric control of aerial photography in Canada. G.R.

A82-34727

REMOTE SENSING OF THERMAL SUBSURFACE TERRAIN PROPERTIES

F. E. ALZOFON (Boeing Aerospace Co., Seattle, WA) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 335-341. refs

It is noted that although the sensed radiation is generated and limited by heat flow through the material underlying the emitting surface, little attention appears to have been paid to the effect of variation in properties of the conducting materials on the information carried by the emitted radiation. As a consequence, variations in thermal radiation may be attributed solely to variation of the temperature and emissivity of the radiating surface. However, it is shown that variation in radiant emittance can equally well be dominated by variation in the thermal conductivity of the underlying material. Criteria are derived under which either thermal conductivity variations or emissivity variations dominate radiant emittance data. A definition is given of threshold temperature; below the threshold, emissivity variations dominate, above it thermal conductivity variations dominate. Expressions are presented for the threshold temperature for various kinds of surface cooling. C.R.

AN OPTICAL DATA LINK FOR AIRBORNE SCANNING SYSTEM

M. J. GREEN (Wisconsin, University, Madison, WI) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 476-482.

In connection with a study of oceanic thermal fronts, the Navy is interested in a thermal scanning system which could be used with their P-3 patrol aircraft. A suitable scanning system would be the RS-18A scanning thermal IR radiometer. However, an obstacle regarding the envisaged use of the instrument is related to the necessity to employ the aircraft without an introduction of any modifications. The obstacle has been overcome by making use of an optical data link which replaces the hardwire connections between the scanner and the power supply. The optical link is housed in a ten inch diameter tube which is clamped in position directly behind the scanner head. G.R.

THE USE OF SKYLAB S-190B PHOTOGRAPHY FOR SMALL SCALE MAPPING

I. M. EL-HASSAN (Riyadh, University, Riyadh, Saudi Arabia) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 536-543. refs

The use of the Skylab Earth Terrain Camera (S-190B) with 1:946,000 scale photography in small-scale mapping is investigated. The procedure used in making the measurements on the Skylab imagery is described. An analytical absolute orientation is performed, and the results show that the photography could be used for mapping at scales of 1:100,000 and smaller. The photography used in the test comprises a strip of three photographs exposed on the SO-242 high-resolution color film. Second generation film transparencies made from the original film are used in the actual test. C.R.

A82-34746

COMPARISONS OF LAND COVER CLASSIFICATIONS FROM SELECTED REMOTE SENSING SYSTEMS

J. B. CAMPBELL (Virginia Polytechnic Institute and State University, Blacksburg, VA) and F. M. HENDERSON (New York, State University, Albany, NY) In: American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers. Falls Church, VA, American Society of Photogrammetry, 1981, p. 618-626. refs

The present investigation is concerned with differences in accuracy of land cover maps generated by manual interpretation of several forms of remote sensing imagery. An area near Harrisburg, PA was imaged by K-band SLAR, the Landsat-1 MSS, the Landsat-3 RBV, and two Seasat SAR passes. These images were manually interpreted to yield land cover parcels corresponding to the Level I categories considered by Anderson et al. (1976). The resulting interpretations were compared with the more detailed USGS land cover map of the same region to determine classification errors. It is pointed out, however, that the results of this comparison cannot be interpreted as definitive assessments of the merits of each sensor system. Continued research is necessary. According to the current study, airborne radar imagery produced the best overall accuracy. With respect to the four space-borne sensor systems the MSS and RBV images are preferable to the digitally processed Seasat SAR image with the optically processed Seasat SAR image being the least accurate system product. G.R.

A82-36018

THE USE OF MICROWAVE RADIOMETRY FOR THE DETERMINATION OF SNOW COVER HEIGHT [ISPOL'ZOVANIE SVCH RADIOMETRII DLIA OPREDELENIIA VYSOTY SNEZHNOGO POKROVA]

V. E. GERSHENZON, V. G. IRISOV, IU. B. KHAPIN, and V. S. ETKIN (Akademiia Nauk SSSR, Institut Kosmicheskikh Issledovanii, Moscow, USSR) Akademiia Nauk SSSR, Doklady, vol. 264, no. 3, 1982, p. 601-603. In Russian. refs

A method is proposed for determining the height of snow cover from remote measurements of the brightness temperatures in the wavelength range 1.5-0.34 cm. The method is validated by means of a model experiment and by comparing the results with direct measurements. The remote and direct measurements are found to correlate to within 5 cm. V.L.

MICROWAVE SENSING FROM SPACE

H. SCHUESSLER (Dornier System GmbH, Friedrichshafen, West Germany) American Astronautical Society and Deutsche Gesellschaft fuer Luft- und Raumfahrt, Goddard Memorial Symposium on Spacelab, Space Platforms and the Future, 20th, Greenbelt, MD, Mar. 17-19, 1982, AAS 15 p. Research supported by the Bundesministerium fuer Forschung und Technologie. (AAS PAPER 82-127)

The design, functions, and performance of satellite microwave sensor systems for earth imaging are described. It is noted that microwave operations can be carried out in all weather and in day or night conditions, and that current satellite systems operate in the interval of 1-20 GHz. Applications for soil characterization, moisture, and wind vector measurements over the sea are described in terms of frequency selection, power, and antenna requirements. Sunsynchronous orbits offer the advantage of low power storage capabilities due to avoidance of eclipse conditions. Areas of development necessary to implement an SAR for GEO positioning are reviewed, and features of a microwave remote sensing experiment involving SAR operating at 9.6 GHz during the first Spacelab flight on the Shuttle are presented. Finally, details of the ERS-1 satellite, which will carry a radar altimeter, wind scatterometer, and SAR are outlined. M.S.K.

SOLID STATE INSTRUMENTATION CONCEPTS FOR EARTH RESOURCE OBSERVATION

H. L. RICHARD (NASA, Goddard Space Flight Center, Advanced Land Observing Systems Studies Office, Greenbelt, MD) American Astronautical Society and Deutsche Gesellschaft fuer Luft- und Raumfahrt, Goddard Memorial Symposium on Spacelab, Space Platforms and the Future, 20th, Greenbelt, MD, Mar. 17-19, 1982, AAS 18 p. refs

(AAS PAPER 82-132)

Late in 1980, specifications were prepared for detail design definition of a six band solid state multispectral instrument having three visible (VIS), one near infrared (NIR), and two short wave infrared (SWIR) bands. This instrument concept, known as the Multispectral Linear Array (MLA), also offered increased spatial resolution, on board gain and offset correction, and additional operational modes which would allow for cross track and stereoscopic viewing as well as a multialtitude operational capability. A description is presented of a summary of some of the salient features of four different MLA design concepts, as developed by four American companies. The designs ranged from the use of multiple refractive telescopes utilizing three groups of focal plane detectors electronic correlation processing for achieving spatial registration, and incorporating palladium silicide (PdSi) SWIR detectors, to a four-mirror all-reflective telecentric system utilizing a beam splitter for spatial registration. SEASAT: A SATELLITE SCATTEROMETER ILLUMINATION TIMES OF SELECTED IN SITU SITES

L. C. SCHROEDER, D. R. GOODRIDGE, J. C. BOBERLY, J. K. HUGHES, and J. L. SWEET Mar. 1982 120 p

(NASA-TM-83280; NAS 1.15:83280) Avail: NTIS HC A06/MF A01 CSCL 08J

A list of times that the SEASAT A Satellite Scatterometer (SASS) illuminated from directly above or directly abeam, selected surface sites where in situ winds were measured is provided. The list is ordered by the Greenwich Mean Time (GMT) of the midpoint of the illumination period (hit time) for a given surface site. The site identification, the orbit number and the direction from the subtrack in which the truth lies are provided. The accuracy of these times depends in part upon the ascending node times, which are estimated to be within +.1 sec, and on the illumination time relative to the ascending node, which is estimated to be within +6 seconds. The uncertainties in the times provided were judged to be sufficiently small to allow efficient and accurate extraction of SASS and in situ data at the selected surface sites. The list contains approximately six thousand hit times from 61 geographically dispersed sites. Author

PURPOSE, BACKGROUND OF 'INTERCOSMOS-21' MISSION

M. A. RIMSHA *In its* USSR Rept.: Space, No. 15 (JPRS-80424) p 94-98 29 Mar. 1982 Transl. into ENGLISH from Zemlya Vselennaya (USSR), no. 5, Sep. - Oct. 1981 p 39-41

Avail: NTIS HC A07/MF A01

Research performed with satellies of the 'Intercosmos' series is discussed. Scientists have investigated short wave emissions of the Sun and the Earth's ionosphere and magnetosphere, cosmic rays and meteorite flows. Various technical systems were tested in these satellites. A transmitter of the 'beacon' type operated successfully in the first 'Intercosmos' satellites, while a special telemetric system later functioned in space and was recommended for further use. The unified telemetric system transmitted information directly to ground stations without the use of spacecraft instruments. S.L.

ANTIPROTONS FROM GALACTIC SOURCES OF COSMIC RAYS AND GAMMA RAYS
R. COWSIK (Franklin Institute, Bartol Research Foundation, Newark, DE; Tata Institute of Fundamental Research, Bombay, India) and T. K. GAISSER (Franklin Institute, Bartol Research Foundation, Newark, DE) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 218-221. Research supported by the U.S. Department of Energy. refs

Recent observations of discrete galactic sources of gamma rays are examined in terms of a modified version of the nested leaky box model of Cowsik and Wilson (1973, 1975). It is shown that the modified model can account for the observed high fluxes of antiprotons. The essential idea is that bright gamma-ray sources are surrounded by significantly more matter than most other sources of cosmic rays; they are thus strong sources of both secondary gamma rays and antiprotons, and at the same time efficient absorbers of heavy nuclei. V.L.

INTERACTIONS OF COSMIC RAYS WITH MOLECULAR CLOUDS
Y. FUKUI and S. HAYAKAWA (Nagoya University, Nagoya, Japan) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 2. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 226-228.

The optical thickness of HI, tau, obtained from the dip of 21 cm line for cold clouds is found to depend on the linear size d as tau varies as d to the 0.44 power. Cosmic rays responsible for the production of HI from H2 are appreciably absorbed in the inner part of the clouds. The tau-d relation indicates a nearly flat energy spectrum of cosmic rays at low energies. (Author)

A82-22599

ON THE PHYSICAL SENSE OF THE CONSTANT OF SOLAR COSMIC RAY CORONAL PROPAGATION

G. A. BAZILEVSKAIA (Akademiia Nauk SSSR, Fizicheskii Institut, Moscow, USSR) and E. V. VASHENIUK (Akademiia Nauk SSSR, Poliarnyi Geofizicheskii Institut, Apatity, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 93-96. refs

An analysis is made of the time dependence of solar cosmic ray intensity and anisotropy. Results show that the coronal time is the time of the escape of the bulk of the particles into the interplanetary space, and it is found that the generation of solar cosmic rays is almost simultaneous in the fast propagation region, which could be in the case of solar cosmic ray acceleration by the quasi-spheric shock wave. This result is in agreement with values found by Bazilevskaya and Vashenyuk (1979) for the transit time of the first particles in the corona for high energy solar cosmic rays. D.L.G.

A82-22603

THE INFLUENCE OF THE SECTOR STRUCTURE OF INTERPLANETARY MAGNETIC FIELD ON THE SOLAR COSMIC RAY CHARACTERISTICS

G. A. BAZILEVSKAIA (Akademiia Nauk SSSR, Fizicheskii Institut, Moscow, USSR) In: International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3. Gif-sur-Yvette, Essonne, France, Commissariat a l'Energie Atomique, 1981, p. 117-120. refs

A statistical study of solar cosmic-ray events from 1957 to 1968 is performed, taking into account only events with certain or probable association. The solar wind velocity is used to define the earth connection longitude on the sun and to map the longitude of sector boundaries. No sector boundary influence on registration probability of solar cosmic-rays is found, and the intensity time dependence seems to be controlled by coronal structures, which are situated lower in the solar atmosphere than where the sector boundaries are formed. D.L.G.

SPACE TO THE EARTH [KOSMOS - ZEMLE]

A. A. BOLSHOI, I. V. MESHCHERIAKOV, S. D. SILVESTROV, A. V. TSEPELEV, and V. A. MASHCHENKO Moscow, Izdatel'stvo Nauka, 1981. 152 p. In Russian. refs

Several applications of space technology are discussed. Attention is given to satellite communications systems, navigation satellites, space geodesy, meteorological satellites, and the remote sensing of earth resources. The principles underlying such applications and the design and operation of the appropriate systems are considered. B.J.

A82-31996

THE USE OF THE SPOT SATELLITE IN NATURAL RESOURCE EVALUATION [EL SATELITE SPOT EN LA EVALUACION DE LOS RECURSOS NATURALES]

P.-M. ADRIEN CIDA, vol. 5, no. 5, 1980, p. 31-36. In Spanish.

The practical application of the remote sensing satellite SPOT to natural resources assessment in Latin America are discussed. SPOT, which will be launched by the French government in 1984, will assume a nearly polar orbit at an altitude of 822 km and be able to scan a 60 km-wide area with 10-20 m sweeps of its multispectral scanner. Comparisons are made with the capabilities of the ARGOS satellite, which has been in operation since 1974. The data to be collected by SPOT will be pertinent to research in agricultural land use, agricultural meteorology, hydrology, forest management, and mineralogical resources. Attention is given to the coordination of such research and the dissemination of its data by French government agencies. O.C.

A82-33555

REMOTE SENSING OF THE EARTH'S RESOURCES - THE SOVIET EXPERIENCE

J. POPESCU British Interplanetary Society, Journal (Space Chronicle), vol. 35, June 1982, p. 273, 274.

The tools, techniques, and targets of Soviet remote sensing systems are explored. Satellite viewing results are rechecked by both aerial surveys and surface sampling for purposes of calibration and confirmation. A total of 1,260 Kosmos spacecraft were launched by 1979, and carried vidicons and microwave sensors for data acquisition. The Salyut space stations were also equipped with a multispectral scanner which featured 10 m resolution, could discern between wet and dry ground, and covered the range 0.46-0.89 microns. Additional instrumentation comprised a radio telescope, stereoscopic camera, and SAR. World grain crops are monitored to anticipate the world wheat market, regions of intense storm activity such as the Bermuda Triangle are studied, and weather conditions and evolution, particularly in Arctic shipping areas, are tracked. Telemetry stations are located in five countries outside the Soviet Union. Instances of successful cosmonaut remote sensing for mineral prospecting, glacier mapping, and sea ice tracking to protect ocean-going vessels are cited. M.S.K.

A82-34116#

EARTH OBSERVATIONS FROM SPACE - TRENDS AND PROSPECTS

G. BRACHET (Centre National d'Etudes Spatiales, Paris, France) In: International aerospace review; Proceedings of the First International Aerospace Symposium, Le Bourget, Seine-Saint-Denis, France, June 2, 3, 1981. New York, American Institute of Aeronautics and Astronautics, 1982, p. 215-223.

The instrumentation and missions of various earth observation satellites are outlined. Earth observation satellites are grouped into experimental types for testing instruments or observing techniques, operational meteorological satellites with on-line users, the Landsat series of satellites for performing whole-earth scanning using different EM wavelengths, and ocean and ice scanning satellites. The Tiros-N series of satellites included advanced very high resolution radiometers for sea-surface temperature measurements, a solar backscatter ultraviolet sensor for global ozone monitoring, and an advanced microwave sounding unit. The GOES-D spacecraft carries an improved imaging radiometer for atmospheric vertical sounding, while the European Meteosat features a water vapor channel at 6-7 microns for upper atmosphere water vapor content assays. Landsat data has been useful in areas such as agriculture, forestry, urban planning, mapping, cartography, water resources studies, and geology. M.S.K.

ERS-1 EUROPEAN REMOTE SENSING SATELLITE

Dornier-Post (English Edition), no. 2, 1982, p. 24-29.

The mission objectives and the components developed for the ERS-1 remote sensing satellite are discussed. The spacecraft is intended for use in weather forecasting, sea state forecasting, off-shore activities support, ship routing, ice monitoring, ocean pollution monitoring, scientific investigations of complex ocean interactions, and microwave sensing of land surfaces and coastal zones. A supply module provides power for the instruments and earth pointing. The data will be transmitted and possibly stored on board. Launched by the Ariane into a 675 km sunsynchronous orbit, ERS-1 will carry a sidelooking radar with SAR for high resolution land and ocean imaging and wave spectra plotting, and a wind scatterometer for measurements from 4-24 m/sec over the oceans. A microwave radar serves for wave height, earth surface height, wind speed, and iced- or open-ocean determination. Launch is scheduled for 1987. M.S.K.

SPACE SCIENCE FOR APPLICATIONS - THE HISTORY OF LANDSAT

P. E. MACH In: Space science comes of age: Perspectives in the history of the space sciences; Proceedings of the Symposium, Washington, DC, March 23, 24, 1981. Washington, DC, Smithsonian Institution Press, 1981, p. 135-148. NASA-supported research. refs

The history of the Landsat project is discussed in terms of three historical phases, each characterized by a dominant problem. From 1964 to 1967, the challenge was to develop interagency cooperation and to achieve consensus on basic plans for the satellite. Between 1968 and 1971, the cooperating agencies had to persuade the Bureau of the Budget to provide funding for the project. Since 1972, the challenge to NASA has been to encourage applications of the Landsat data and plan the shift from an experimental program to an operational one. The tension between experimental and operational goals has run through all these phases, and the conflicts between agencies is detailed, as well as the interaction between technological and political systems. TEN-ECOSYSTEM STUDY Final Report

A. V. MAZADE, Principal Investigator Aug. 1981 96 p refs
Sponsored in part by USDA Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198. ERTS
(Contract NAS9-15800; PROJ. AGRISTARS)
(E82-10186; NASA-CR-167457; NAS 1.26:167457;
LEMSCO-13491) Avail: NTIS HC A05/MF A01 CSCL 13B

Remote sensing methodology developed for the Nationwide Forestry Applications Program utilize computer data processing procedures for performing inventories from satellite imagery. The Ten-Ecosystem Study (TES) was developed to test the processing procedures in an intermediate-sized application study. The results of TES indicate that LANDSAT multispectral imagery and associated automatic data processing techniques can be used to distinguish softwood, hardwood, grassland, and water and make inventory of these classes with an accuracy of 70 percent or better. The technical problems encountered during the TES and the solutions and insights to these problems are discussed. The TES experience is useful in planning subsequent inventories utilizing remote sensing technology. T.M.

CIVIL LAND REMOTE SENSING SYSTEM

Washington GPO 1982 77 p Presented by the Subcom. on Space Sci. and Appl. of the Comm. on Sci. and Technol., 97th Congr., 1st Sess., Dec. 1981
(GPO-87-070) Avail: Subcommittee on Space Science and Applications

Current remote sensing research and development activities, current planning for an operational system, and international remote sensing activities are summarized. Significant issues considered include: the role of government vis-a-vis the private sector, the way in which it can best serve both the public and the private sector, its role in future research and development, and regulations and terms it must mandate for a civil land remote sensing system. Legislation needed for government/industry joint ventures is also examined. A.R.H.

OSTA-1 POST MISSION OPERATION REPORT

1982 17 p
(NASA-TM-84191; NAS 1.15:84191; S-420-81-01) Avail: NTIS HC A02/MF A01 CSCL 22A

The first science and applications payload for the space shuttle was carried on STS-2. The space shuttle's performance and systems were tested. The Shuttle's capability of providing a platform for scientific and applications research was demonstrated. The OSTA-1 payload was selected and developed to demonstrate this secondary objective. The experiments selected for the OSTA-1 payload were concerned with remote sensing of Earth resources, environmental quality, ocean conditions, meteorological phenomena and life sciences. These experiments demonstrated the Shuttle's capability for space research and the potential application of techniques for future remote sensing. S.L.

Major first year accomplishments are summarized and plans are provided for the next 12-month period for a program established by NASA with the Environmental Research Institute of Michigan to investigate methods of making LANDSAT technology readily available to a broader set of private sector firms through local community colleges. The program applies a network where the major participants are NASA, university or research institutes, community colleges, and obtain hands-on training in LANDSAT data analysis techniques, using a desk-top, interactive remote analysis station which communicates with a central computing facility via telephone line, and provides for generation of land cover maps and data products via remote command. HISTORY OF THE FRENCH SATELLITE SPACE PROGRAM [HISTORIQUE DU PROGRAMME SPATIALE SCIENTIFIQUE FRANCAIS]
J. C. HUSSON *In its* The Technol. of Spaceborne Sci. Expt. p 3-10 1981 In FRENCH
Avail: NTIS HC A99/MF A01

The amplitude of the French space program and the variety of research that supports it are discussed. Three objectives stand out: (1) develop space research and technology; (2) develop spacecraft and related technology; and (3) participate on a global scale in research into the terrestrial environment, space observation, and exploration of the solar system. Given this perspective, results concerning astronomy, planetology, geophysics, geodesy, meteorology, and biology are reviewed. Future projects in space manufacturing are also mentioned. Author (ESA)

A LEGISLATOR'S GUIDE TO LANDSAT
1982 33 p Sponsored by NASA. Original contains color imagery. Original photography may be purchased from the EROS Data Center, Sioux Falls, S.D. 57198 ERTS
(E82-10290; NASA-CR-168859; NAS 1.26:168859) Avail: NTIS HC A03/MF A01 CSCL 05B

The LANDSAT satellite is an effective tool in meeting the natural resources data requirements of state and federal legislation. The availability of data from the satellite is beginning to have an impact on state legislature activities. An overview of the history, operation, and data analysis techniques, is presented as well as a discussion of the advantages and limitations of this method of remote sensing. Applications are discussed in the areas of (1) land resource planning and management; (2) coastal zone management; (3) agriculture; (4) forestry; (5) routing and siting; (6) environmental monitoring; and (7) geological exploration. National and state sources from which information about LANDSAT technology is available are listed. A.R.H.

KEY ISSUES IN THE ANALYSIS OF REMOTE SENSING DATA: A REPORT ON THE WORKSHOP
P. H. SWAIN, Principal Investigator Jun. 1981 41 p Workshop held in West Lafayette, Ind., 22-23 Jun. 1981 ERTS
(Contract NAS9-15466)
(E82-10348; NASA-CR-167570; NAS 1.26:167570;
LARS-TR-062481) Avail: NTIS HC A03/MF A01 CSCL 05B

The procedures of a workshop assessing the state of the art of machine analysis of remotely sensed data are summarized. Areas discussed were: data bases, image registration, image preprocessing operations, map oriented considerations, advanced digital systems, artificial intelligence methods, image classification, and improved classifier training. Recommendations of areas for further research are presented. J.D.

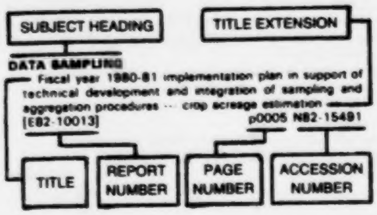
OCTOBER 1982

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
DATA SAMPLING
Fiscal year 1980-81 implementation plan in support of technical development and integration of sampling and aggregation procedures --- crop acreage estimation
[E82-10013]
p0005 N82-15491
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

The subject heading is a key to the subject content of the document. The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, the title extension is added, separated from the title by three hyphens. The (NASA or AIAA) accession number and the page number are included in each entry to assist the user in locating the abstract in the abstract section (of this supplement). If applicable, a report number is also included as an aid in identifying the document. Under any one subject heading, the accession numbers are arranged in sequence with the AIAA accession numbers appearing first.

ALGORITHMS

Multistage classification of multispectral Earth observational data: The design approach [E82-10213] p 72 N82-23586

ALTIMETERS

Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621

Geoid height-age relation from Seasat altimeter profiles across the Mendocino Fracture Zone p 34 A82-32646

ALTITUDE

Effects of altitude, focal length, and filter combinations on color infrared photography of citrus groves p 9 A82-34729

Comparison of brightness indicatrixes of snow cover measured from an aircraft and calculated theoretically for different heights of the atmosphere p 62 A82-35140

AMMONIA

Ammonia and the NOx budget of the troposphere p 27 A82-36293

ANALYSIS OF VARIANCE

A comparison of stratified versus regression estimators p 11 N82-23133

ANGULAR CORRELATION

Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550

ANGULAR DISTRIBUTION

Albedo and angular characteristics of the reflectance of the underlying surface and clouds --- Russian book p 33 A82-30849

Comparison of brightness indicatrixes of snow cover measured from an aircraft and calculated theoretically for different heights of the atmosphere p 62 A82-35140

ANGULAR MOMENTUM

Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579

ANISOTROPY

On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599

ANNUAL VARIATIONS

A study of the earth's radiation budget using a general circulation model p 52 A82-30666

The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting p 61 A82-35131

Interannual variations of outgoing IR associated with tropical circulation changes during 1974-1978 p 54 A82-36341

Observations and analyses of the total amount of atmospheric ozone in the Beijing region and in the region of Jolmolungma Mountain in Tibet p 28 A82-36444

The seasonal variations of ozone and temperature in the middle and the upper stratosphere p 29 A82-36534

ANOMALIES

Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A [DE81-027158] p 46 N82-25620

Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D [DE81-027156] p 46 N82-25622

ANTARCTIC REGIONS

Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10308] p 37 N82-24582

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10309] p 37 N82-24583

ANTIPARTICLES

Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579

ANTIPROTONS

Comparison of the measured antiproton flux with that predicted by the 'leaky box' model p 1 A82-22544

Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545

Antiprotons from galactic sources of cosmic rays and gamma rays p 82 A82-22546

ARABIAN SEA

On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909

Analysis of ocean and atmosphere thermodynamical characteristics during the onset of southwest monsoon over the Arabian Sea p 57 N82-23945

ARCHITECTURE (COMPUTERS)

Design guidelines for satellite image data distribution systems p 70 A82-37048

ARCTIC OCEAN

Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787

ARGENTINA

Analysis of scanner data for crop inventories [E82-10192] p 10 N82-22626

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor [E82-10231] p 15 N82-23604

Analysis of scanner data for crop inventories [E82-10241] p 16 N82-24519

ARIZONA

The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10153] p 45 N82-24518

NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle [DE82-005527] p 48 N82-27810

ARTIFICIAL INTELLIGENCE

Key Issues in the Analysis of Remote Sensing Data: A report on the workshop [E82-10348] p 85 N82-26746

ASTROMETRY

On reference coordinate systems used in polar motion determinations p 33 A82-32090

ASTRONOMICAL COORDINATES

The definition of the terrestrial coordinate frame by long baseline interferometry p 33 A82-32084

ASTRONOMICAL MAPS

A color-ratio map of Mercury p 31 A82-22294

ASTRONOMICAL MODELS

The cosmic ray positron spectrum p 1 A82-22542

Comparison of the measured antiproton flux with that predicted by the 'leaky box' model p 1 A82-22544

Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545

Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553

Model for solar hard X-ray bursts p 65 A82-22581

ASTRONOMICAL PHOTOMETRY

Subtleties in the flat-fielding of charge-coupled device /CCD/ images p 68 A82-32581

ATLANTIC OCEAN

Comparison data for Seasat altimetry in the western North Atlantic p 50 A82-29611

A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean [E82-10360] p 58 N82-26758

ATMOSPHERIC ATTENUATION

Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618

Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766

ATMOSPHERIC BOUNDARY LAYER

On the application of a model of boundary-layer flow over low hills to real terrain p 29 A82-36741

Marine boundary layer wind structure over the Bay of Bengal during Monex-79 --- Monsoon Experiment (MONEX) p 57 N82-23929

ATMOSPHERIC CHEMISTRY

Observation of the diurnal variation of atmospheric ozone p 26 A82-35895

The seasonal variations of ozone and temperature in the middle and the upper stratosphere p 29 A82-36534

ATMOSPHERIC CIRCULATION

Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements p 49 A82-28907

A study of the earth's radiation budget using a general circulation model p 52 A82-30666

Interannual variations of outgoing IR associated with tropical circulation changes during 1974-1978 p 54 A82-36341

The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

ATMOSPHERIC COMPOSITION

Total ozone variations 1970-74 using Backscattered Ultraviolet /BUV/ and ground-based observations p 26 A82-36053

Tropospheric CO measurement experiment from the second Space Shuttle flight p 27 A82-36292

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

Application of infrared techniques to the study of atmospheric ozone p 27 A82-36414

Total ozone retrieval from satellite Meteor 28 Fourier spectrometer measurements p 28 A82-36422

Observations and analyses of the total amount of atmospheric ozone in the Beijing region and in the region of Jolmolungma Mountain in Tibet p 28 A82-36444

In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program [NASA-TM-84471] p 30 N82-25661

ATMOSPHERIC DIFFUSION

A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean [E82-10360] p 58 N82-26758

ATMOSPHERIC EFFECTS

Effect of atmospheric conditions on remote sensing of vegetation parameters p 24 A82-32901

Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images p 70 A82-35141

ATMOSPHERIC IONIZATION

The determination of differential X-ray spectrum of the solar flare using ionospheric data p 65 A82-22582

ATMOSPHERIC MODELS

A study of the earth's radiation budget using a general circulation model p 52 A82-30666

The growth of snow in winter storms - An airborne observational study p 60 A82-33329

ATMOSPHERIC MOISTURE

Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements p 49 A82-28907

Description of Seasat radiometer status and results p 52 A82-29622

Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196

ATMOSPHERIC OPTICS

Relating Landsat digital count values to ground reflectance for optically thin atmospheric conditions p 66 A82-29762

ATMOSPHERIC PRESSURE

Mean sea-level pressure in the Southern Hemisphere during the FGGE period --- First Global Atmospheric Research Program Global Experiment (FGGE); buoys p 55 N82-23856

Estimates of the statistical structure of the atmospheric pressure field in summer Monex-79 area p 57 N82-23939

ATMOSPHERIC RADIATION

Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405

ATMOSPHERIC SOUNDING

Total ozone variations 1970-74 using Backscattered Ultraviolet /BUV/ and ground-based observations p 26 A82-36053

Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415

ATMOSPHERIC TEMPERATURE

Estimation of the temperature of the upper boundary of cloud cover over the world ocean p 54 A82-36005

The seasonal variations of ozone and temperature in the middle and the upper stratosphere p 29 A82-36534

Satellite radiation measurements for the retrieval of the vertical temperature profiles p 70 A82-36935

A meteorologically driven maize stress indicator model [E82-10112] p 11 N82-23564

ATMOSPHERIC WINDOWS

Application of infrared techniques to the study of atmospheric ozone p 27 A82-36414

ATTITUDE CONTROL

LANDSAT-D conical scanner evaluation plan [E82-10340] p 81 N82-25602

AURORAL ARCS

Extremely high latitude auroras p 76 A82-31020

AURORAL IRRADIATION

Large amplitude undulations on the equatorward boundary of the diffuse aurora p 76 A82-31019

AURORAL ZONES

Generation of the auroral kilometric radiation p 26 A82-35542

AUSTRALIA

Selection of the Australian indicator region [E82-10222] p 13 N82-23595

The onset of the Australian Northwest monsoon during winter MONEX: Broadscale flow revealed by an objective analysis scheme p 56 N82-23912

AUTOCORRELATION

The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana [E82-10341] p 46 N82-25603

AUTOMATIC WEATHER STATIONS

Remote automatic weather station for resource and fire management agencies [PB82-107335] p 30 N82-23963

AUTOMATION

Extraction of line shaped objects from aerial images using a special operator to analyze the profiles of functions p 67 A82-32033

AVIONICS

Effective electromagnetic shielding in multilayer printed circuit boards [AIAA 81-2333] p 59 A82-13528

B

BALTIC SEA

The METEOSAT Data Collection System and its application p 75 N82-26037

BARLEY

AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment [E82-10126] p 11 N82-23565

AgRISTARS: Supporting research. Spring small grains planting date distribution model [E82-10208] p 12 N82-23581

Evaluation of the procedure for separating barley from other spring small grains --- North Dakota, South Dakota, Minnesota and Montana [E82-10230] p 14 N82-23603

Description of the FORTRAN implementation of the spring small grains planting date distribution model [E82-10235] p 15 N82-23608

Multilevel measurements of surface temperature over undulating terrain planted to barley [E82-10245] p 16 N82-24523

Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota [E82-10329] p 18 N82-24602

BAROTROPIC FLOW

Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX) p 56 N82-23900

BAROTROPISM

Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

BARREN LAND

A multi-frequency radiometric measurement of soil moisture content over bare and vegetated fields [E82-10238] p 16 N82-23611

Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas [E82-10362] p 20 N82-26760

BATHYMETERS

Bathymetric imaging p 69 A82-34720

BAY ICE

Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska [AD-A110606] p 58 N82-26764

BAYS (TOPOGRAPHIC FEATURES)

Marine boundary layer wind structure over the Bay of Bengal during Monex-79 --- Monsoon Experiment (MONEX) p 57 N82-23929

BEACHES
Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948
BEDROCK
Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/
p 41 A82-30305
Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569
BEETLES
Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536
Estimating mountain pine beetle-killed ponderosa pine over the front range of Colorado with high altitude panoramic photography p 7 A82-32704
BERMUDA
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
BERYLLIUM 10
The cosmic ray positron spectrum p 1 A82-22542
BIBLIOGRAPHIES
The crustal structure and tectonics of South America
[E82-10319] p 38 N82-24592
BIOLUMINESCENCE
Laser-induced bioluminescence --- for remote sensing of marine organisms p 53 A82-32559
BIOMASS
Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas
[E82-10363] p 20 N82-26761
BLACK HOLES (ASTRONOMY)
Acceleration processes near massive black holes
p 3 A82-22572
BLIGHT
Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/
p 7 A82-29538
BOTSWANA
Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana
[OGMR-56] p 42 N82-22636
BOUNDARY LAYER FLOW
On the application of a model of boundary-layer flow over low hills to real terrain p 29 A82-36741
On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909
BRAZIL
Structure, composition and thermal state of the crust in Brazil --- geomagnetic survey
[E82-10187] p 35 N82-22621
Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil
[E82-10291] p 63 N82-24569
A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean
[E82-10360] p 58 N82-26758
BREMSSTRAHLUNG
Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587
BRIGHTNESS DISTRIBUTION
Comparison of brightness indicatrixes of snow cover measured from an aircraft and calculated theoretically for different heights of the atmosphere p 62 A82-35140
BRIGHTNESS TEMPERATURE
Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905
Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements
p 49 A82-28907
Evaluation of atmospheric attenuation from SMMR brighiness temperature foi the Seasat satellite scatterometer p 51 A82-29618
Snowpack monitoring in North America and Eurasia using passive microwave satellite data
p 78 A82-32915
Depression of brightness temperature of sea surfaces covered with monomolecular oil films relative to clean water surfaces at 1.43 GHz p 54 A82-33322
Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626
A multi-frequency radiometric measurement of soil moisture content over bare and vegetated fields
[E82-10238] p 16 N82-23611
The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169063] p 57 N82-26525
Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco
[E82-10347] p 19 N82-26745
BUNDLES
A practical study of gross-error detection in bundle adjustment p 69 A82-34702
BUOYS
The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

C

C BAND
C-band radar for determining surface soil moisture
p 10 A82-37194
CALIBRATING
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
Sensitivity of Dobson total ozone estimations to wavelength band calibration uncertainties
p 27 A82-36405
Dobson spectrophotometer calibrations, possible errors in ozone absorption coefficients, and errors due to interfering pollutant gases p 28 A82-36431
C-band radar for determining surface soil moisture
p 10 A82-37194
CALIFORNIA
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada
[E82-10191] p 62 N82-22625
Multilevel measurements of surface temperature over undulating terrain planted to barley
[E82-10245] p 16 N82-24523
Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1 --- uranium exploration
[DE82-005541] p 48 N82-27813
Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California
[DE82-005543] p 48 N82-27815
CAMERAS
Image quality and height measurement accuracy of serial survey camera imagery from high altitudes
p 78 A82-33297
Analytical processing of photographs taken by paired cameras p 79 A82-34471
CANADA
Magnetic charts of Canada derived from Magsat data
p 32 A82-30778
AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment
[E82-10126] p 11 N82-23565
CANOPIES (VEGETATION)
Effect of atmcspheric conditions on remote sensing of vegetation parameters p 24 A82-32901
The response characteristics of vegetation in Landsat MSS digital data p 8 A82-32907
View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914
Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery
p 68 A82-32916
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623
Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains
[E82-10205] p 11 N82-23578
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans
[E82-10227] p 14 N82-23600
Linear polarization of light by two wheat canopies measured at many view angles
[E82-10229] p 14 N82-23602
A model of plant canopy polarization
[E82-10233] p 15 N82-23606
Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610
An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563
An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data
[E82-10286] p 16 N82-24564
Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota
[E82-10329] p 18 N82-24602
Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742
Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752
Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753
CANTILEVER BEAMS
Nonlinear theory for elastic beams and rods and its finite element representation
[WTHD-143] p 73 N82-24517
CARBON DIOXIDE
Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites
p 42 A82-36298
CARBON DIOXIDE CONCENTRATION
Aircraft monitoring of surface carbon dioxide exchange p 23 A82-30293
CARBON MONOXIDE
Tropospheric CO measurement experiment from the second Space Shuttle flight p 27 A82-36292
CARBON STARS
On the stellar origin of the Ne-22 excess in cosmic rays p 21 A82-22562
CELESTIAL GEODESY
Space to the earth --- Russian book on space technology applications p 83 A82-30850
CELESTIAL REFERENCE SYSTEMS
Establishment of terrestrial reference frames by new observational techniques p 33 A82-32078
On reference coordinate systems used in polar motion determinations p 33 A82-32090
Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096
CENTRAL AMERICA
Geotectonics of South America --- regional magnetic and gravity anomalies of South America
[E82-10320] p 38 N82-24593
CHARGE COUPLED DEVICES
Subtleties in the flat-fielding of charge-coupled device /CCD/ images p 68 A82-32581
CHARGED PARTICLES
Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557
Observations of interplanetary energetic charged particles from gamma-ray line solar flares
p 65 A82-22586
CHECKOUT
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10313] p 82 N82-26743
CHEMICAL COMPOSITION
Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554
The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555
Physical state of the birth place of cosmic rays and its implication to the acceleration processes
p 2 A82-22559
High resolution measurements of solar flare isotopes
p 22 A82-22606
CHEMICAL EFFECTS
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning
p 6 A82-29537
CHEMICAL FRACTIONATION
Laboratory studies of actinide metal-silicate fractionation p 49 A82-22306
CHESAPEAKE BAY (US)
Analysis of ocean color scanner data from the Superflux III Experiment
[NASA-TM-83290] p 55 N82-23614
CHLOROPHYLLS
Analysis of ocean color scanner data from the Superflux III Experiment
[NASA-TM-83290] p 55 N82-23614
CHROMOSPHERE
Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona
p 3 A82-22589
The model of the cosmic ray enrichment by helium-3
p 31 A82-22614
CIRCUIT BOARDS
Effective electromagnetic shielding in multilayer printed circuit boards
[AIAA 81-2333] p 59 A82-13528

CITIES
Remote sensing - A potential aid in the preparation of an urban tree inventory p 9 A82-34732
Longwave infrared observation of urban landscapes p 25 A82-34744

CITRUS TREES
Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/ p 7 A82-29538
Effects of altitude, focal length, and filter combinations on color infrared photography of citrus groves p 9 A82-34729

CLASSIFICATIONS
The use of prior probabilities in maximum likelihood classification of remotely sensed data p 68 A82-32904
Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri. [E82-10186] p 84 N82-22620
AgRISTARS: Foreign commodity production forecasting. The 1980 US corn and soybeans exploratory experiment [E82-10206] p 11 N82-23579
Multistage classification of multispectral Earth observational data: The design approach [E82-10213] p 72 N82-23586
Use and applicability of the vegetation component of the national site classification system --- Sumter National Forest, South Carolina [E82-10234] p 15 N82-23607
Analysis of scanner data for crop inventories [E82-10241] p 16 N82-24519
Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site [E82-10287] p 17 N82-24565
Key Issues in the Analysis of Remote Sensing Data: A report on the workshop [E82-10348] p 85 N82-26746
Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas [E82-10363] p 20 N82-26761

CLIMATE
The onset of the Australian Northwest monsoon during winter MONEX: Broadscale flow revealed by an objective analysis scheme p 56 N82-23912

CLIMATOLOGY
A study of the earth's radiation budget using a general circulation model p 52 A82-30666
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group [NASA-TM-84731] p 18 N82-25608
Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609

CLOUD COVER
Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766
Estimation of the temperature of the upper boundary of cloud cover over the world ocean p 54 A82-36005

CLOUD HEIGHT INDICATORS
The meteorological product - 'Cloud-top height' p 70 A82-36043

CLOUD PHOTOGRAPHY
Skirt clouds associated with the Soufriere eruption of 17 April 1979 p 24 A82-33656

CLOUD PHYSICS
Albedo and angular characteristics of the reflectance of the underlying surface and clouds --- Russian book p 33 A82-30849
Skirt clouds associated with the Soufriere eruption of 17 April 1979 p 24 A82-33656

CLOUDS (METEOROLOGY)
Representativeness of cloud motion winds deduced from GOES Indian Ocean satellite imagery for the description of the Indian summer monsoon --- superpressure balloons for the study of the Indian summer monsoon (BALSAMINE) p 55 N82-23879
Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

COAL UTILIZATION
Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary [DE82-900580] p 31 N82-27802
Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data [DE82-900581] p 31 N82-27803

COASTAL CURRENTS
Nearshore current pattern off south Texas - An interpretation from aerial photographs p 53 A82-32903
MONEX oceanographic observations along the East African coast --- global atmospheric research program p 56 N82-23908
Fluid-sediment interactions on beaches and shelves [AD-A110838] p 59 N82-26948

COASTAL WATER
Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896
A quantitative multispectral analysis system for aerial photographs applied to coastal planning p 55 A82-37505
Analysis of ocean color scanner data from the Superflux III Experiment [NASA-TM-83290] p 55 N82-23614
Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain [E82-10300] p 17 N82-24576
A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean [E82-10360] p 58 N82-26758
Meteorological and aircraft data for CUE 2 1973 [PB82-149246] p 59 N82-26949

COASTS
Coastal environment change analysis by Landsat MSS data p 54 A82-34219
Some empirical rules for forecasting fog and status over northern Florida, southern Georgia and adjacent coastal waters [PB82-154006] p 59 N82-27949

COHERENT RADAR
Study visit to United States laser technology centers, 1981 [FOA-C-30257-E1] p 81 N82-24439

COLD WEATHER
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula [E82-10299] p 17 N82-24575

COLOR CODING
Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco [E82-10315] p 74 N82-24588
Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

COLOR INFRARED PHOTOGRAPHY
Riparian vegetation mapping in Northeastern California using high altitude color infrared aerial photography p 5 A82-29528
Inventory of wildlife habitat from color infrared aerial photography for Cobb Island, Virginia p 6 A82-29529
Considerations in using color infrared photographs for vegetative interpretation p 6 A82-29530
Multi-resource inventory in interior Alaska p 6 A82-29532
Estimating rangeland cover proportions with large-scale color-infrared aerial photographs p 6 A82-29534
Mapping riparian vegetation in Southeastern Oregon using digitized large scale color infra-red aerial photography p 6 A82-29535
Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536
Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/ p 7 A82-29538
An infrared exposure meter p 76 A82-29541
Estimating bark beetle-killed lodgepole pine with high altitude panoramic photography p 7 A82-32703
Effects of altitude, focal length, and filter combinations on color infrared photography of citrus groves p 9 A82-34729
Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731
Aerial photography vs. Landsat for digital land-cover mapping in an urban watershed p 61 A82-34745

COLOR PHOTOGRAPHY
A color-ratio map of Mercury p 31 A82-22294
Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 22 A82-29327
Color aerial photography detects nutrient status of loblolly pine plantations p 6 A82-29531
Application of 35mm color aerial photography to forest land change detection p 6 A82-29533
Evaluation of spruce-fir forests using small-format photographs p 8 A82-32707
The use of Skylab S-190B photography for small scale mapping p 80 A82-34742
Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco [E82-10315] p 74 N82-24588
Mapping of wildlife habitat in Farmington Bay, Utah [E82-10354] p 19 N82-26752

COLOR TELEVISION
Terrain analysis from Landsat using a color TV enhancement system p 68 A82-32911

COLORADO
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge [E82-10217] p 13 N82-23590
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test [E82-10224] p 14 N82-23597

COMMODITIES
A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591

COMPARISON
An analysis of LANDSAT MSS scene-to-scene registration accuracy [E82-10285] p 16 N82-24563
An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data [E82-10286] p 16 N82-24564

COMPTON EFFECT
Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553

COMPUTER COMPATIBLE TAPES
Computation with physical values from Landsat digital data p 68 A82-32709
Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics [E82-10203] p 72 N82-23576
Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612
An analysis of LANDSAT MSS scene-to-scene registration accuracy [E82-10285] p 16 N82-24563
An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data [E82-10286] p 16 N82-24564
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595
Models and maps of the main field [E82-10327] p 74 N82-24600
Analysis of MAGSAT data of the Indian region [E82-10358] p 75 N82-26756
Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes [E82-10359] p 30 N82-26757

COMPUTER GRAPHICS
Development of three-dimensional spatial displays using a geographically based information system p 66 A82-29326
RAMS-1, a Resource Analysis and Mapping System p 69 A82-34726

COMPUTER PROGRAMS
The simultaneous employment of geodetic measurements for block adjustments using the method of independent models p 34 A82-33295
A practical study of gross-error detection in bundle adjustment p 69 A82-34702
Description of the FORTRAN implementation of the spring small grains planting date distribution model [E82-10235] p 15 N82-23608

COMPUTER SYSTEMS PROGRAMS
Development of three-dimensional spatial displays using a geographically based information system p 66 A82-29326

COMPUTER TECHNIQUES
A computerized spatial analysis system for assessing wildlife habitat from vegetation maps p 9 A82-34716
A quantitative method to test for similarity between photo interpreters p 69 A82-34722
Present status of on-line analytical triangulation p 69 A82-34940
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans [E82-10227] p 14 N82-23600

COMPUTERIZED SIMULATION
Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587
A simulation study of soil moisture estimation by a space SAR p 60 A82-29333
Orbiting passive microwave sensor simulation applied to soil moisture estimation [E82-10343] p 18 N82-25605

CONFERENCES

International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3 p 65 A82-22580

Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981 p 5 A82-29526

Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440

American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers p 79 A82-34701

CONGRESSIONAL REPORTS

Civil land remote sensing system [GPO-87-070] p 84 N82-22630

Streamlining and ensuring mineral development must begin at local land management levels [EMD-82-10] p 29 N82-23043

CONICAL SCANNING

LANDSAT-D conical scanner evaluation plan [E82-10340] p 81 N82-25602

CONIFERS

Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536

Estimating bark beetle-killed lodgepole pine with high altitude panoramic photography p 7 A82-32703

Estimating mountain pine beetle-killed ponderosa pine over the front range of Colorado with high altitude panoramic photography p 7 A82-32704

CONTINENTAL DRIFT

MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599

CONTINENTS

MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599

CONTOURS

Description of gray level picture using a collection of density contour lines p 66 A82-29409

CONVECTION

A statistical approach to rainfall estimation using satellite and conventional data [NOAA-TR-NESS-89] p 63 N82-22854

CONVECTION CURRENTS

The influence of soil characteristics on regional convection differences above Northern Germany p 10 A82-37589

CONVECTIVE FLOW

Convective outflow of cosmic rays from the Galaxy and background radio emission p 83 A82-22551

COORDINATES

Reference coordinate systems for earth dynamics - A preview p 33 A82-32077

CORN

A meteorologically driven maize stress indicator model [E82-10112] p 11 N82-23564

AgRISTARS: Foreign commodity production forecasting. The 1980 US corn and soybeans exploratory experiment [E82-10206] p 11 N82-23579

Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588

AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment [E82-10216] p 13 N82-23589

Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans [E82-10227] p 14 N82-23600

Analysis of scanner data for crop inventories [E82-10241] p 16 N82-24519

Spectral estimates of solar radiation intercepted by corn canopies [E82-10003] p 18 N82-26742

Association of spectral development patterns with development stages of corn [E82-10353] p 19 N82-26751

CORRELATION

On the anticorrelation between the He/3//He/4/ ratio and proton intensity in He/3/ rich flares p 40 A82-22613

COSMIC RAYS

Fragmentation of Fe nuclei on carbon, hydrogen and CH2 targets. I - Individual charge changing and total cross sections. II - Isotopic cross sections --- for interstellar cosmic ray propagation p 63 A82-22538

A report on the 'cosmic ray propagation problem' p 1 A82-22539

On the characteristics of the very low energy galactic cosmic rays in the interstellar space p 63 A82-22540

The question of short pathlengths in interstellar propagation p 1 A82-22541

Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545

Antiprotons from galactic sources of cosmic rays and gamma rays p 82 A82-22546

Confinement and acceleration of cosmic rays in galactic superbubbles p 82 A82-22547

Interactions of cosmic rays with molecular clouds p 82 A82-22548

Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550

Convective outflow of cosmic rays from the Galaxy and background radio emission p 83 A82-22551

Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552

Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554

The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555

Comparative abundances in solar energetic particles and in galactic cosmic ray sources, and the Ne-22 anomaly p 83 A82-22556

Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557

Cosmic ray composition from acceleration of thermal matter p 64 A82-22558

Physical state of the birth place of cosmic rays and its implication to the acceleration processes p 2 A82-22559

On volatility, first ionization potential, and s- and r-processes --- for Galactic cosmic ray sources p 2 A82-22560

Interstellar grains as seeds for galactic cosmic rays p 2 A82-22561

On the stellar origin of the Ne-22 excess in cosmic rays p 21 A82-22562

Origin of galactic cosmic rays from Ne isotopic composition p 2 A82-22563

Evidence for the stochastic acceleration of cosmic rays in supernova remnants p 2 A82-22564

Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

On the stellar origin of low energy cosmic rays p 21 A82-22567

Acceleration of cosmic rays in accretion shocks p 64 A82-22568

Remarks on cosmic ray origin p 21 A82-22569

Pulsar models and cosmic-ray acceleration p 21 A82-22570

The galactic origin of cosmic rays. II [CONF-810711-2] p 64 A82-22573

Extragalactic cosmic rays, their sources and spectrum p 40 A82-22574

Calculation of production rates of cosmogenic nuclides by Monte Carlo method p 64 A82-22576

Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577

Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579

International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3 p 65 A82-22580

The modulation characteristics of the 19th and 20th solar activity cycles p 59 A82-22615

11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616

Features of cosmic ray variations due to variations in the total magnetic field of the sun p 49 A82-22619

COSMOCHEMISTRY

Laboratory studies of actinide metal-silicate fractionation p 49 A82-22306

The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555

Nucleosynthesis of light and by-passed isotopes in the solar system matter p 64 A82-22578

COTTON

Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton [E82-10220] p 13 N82-23593

COULOMB COLLISIONS

Cosmic ray composition from acceleration of thermal matter p 64 A82-22558

COULOMB POTENTIAL

Coulombian energy losses and the nuclear composition of the solar cosmic rays p 4 A82-22610

CROP CALENDARS

Analysis of scanner data for crop inventories [E82-10192] p 10 N82-22626

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence [E82-10207] p 12 N82-23580

AgRISTARS: Supporting research. Spring small grains planting date distribution model [E82-10208] p 12 N82-23581

Description of historical crop calendar data bases developed to support foreign commodity production forecasting project experiments [E82-10209] p 12 N82-23582

AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment [E82-10216] p 13 N82-23589

A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee [E82-10219] p 13 N82-23592

Selection of the Australian indicator region [E82-10222] p 13 N82-23595

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor [E82-10231] p 15 N82-23604

CROP GROWTH

Color aerial photography detects nutrient status of loblolly pine plantations p 6 A82-29531

Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence [E82-10207] p 12 N82-23580

AgRISTARS: Supporting research. Spring small grains planting date distribution model [E82-10208] p 12 N82-23581

Description of historical crop calendar data bases developed to support foreign commodity production forecasting project experiments [E82-10209] p 12 N82-23582

Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge [E82-10217] p 13 N82-23590

A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee [E82-10219] p 13 N82-23592

Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco [E82-10347] p 19 N82-26745

Association of spectral development patterns with development stages of corn [E82-10353] p 19 N82-26751

CROP IDENTIFICATION

Field size, length, and width distributions based on LACIE ground truth data --- large area crop inventory experiment p 8 A82-32909

Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer p 8 A82-34179

Analysis of scanner data for crop inventories [E82-10192] p 10 N82-22626

AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment [E82-10126] p 11 N82-23565

Agricultural Research Service research highlights in remote sensing for calendar year 1980 [E82-10228] p 14 N82-23601

Evaluation of the procedure for separating barley from other spring small grains --- North Dakota, South Dakota, Minnesota and Montana [E82-10230] p 14 N82-23603

AgRISTARS: Agriculture and resources inventory surveys through aerospace remote sensing [E82-10236] p 15 N82-23609

Canopy reflectance as influenced by solar illumination angle [E82-10237] p 15 N82-23610

An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data [E82-10286] p 16 N82-24564

Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco [E82-10347] p 19 N82-26745

Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas [E82-10363] p 20 N82-26761

CROP INVENTORIES

Effects of altitude, focal length, and filter combinations on color infrared photography of citrus groves p 9 A82-34729

Analysis of scanner data for crop inventories [E82-10192] p 10 N82-22626

A comparison of stratified versus regression estimators p 11 N82-23133

Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588

AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment [E82-10216] p 13 N82-23589

Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa [E82-10221] p 13 N82-23594

Selection of the Australian indicator region [E82-10222] p 13 N82-23595

Analysis of scanner data for crop inventories [E82-10241] p 16 N82-24519

Inventory of wetlands and agricultural land cover in the upper Sevier River Basin, Utah [E82-10345] p 18 N82-25607

Spectral estimates of solar radiation intercepted by corn canopies [E82-10003] p 18 N82-26742

CROP VIGOR

Remote sensing of the weediness of crop fields p 5 A82-29435

Considerations in using color infrared photographs for vegetative interpretation p 6 A82-29530

Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905

Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643

AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment [E82-10216] p 13 N82-23589

A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions [E82-10225] p 14 N82-23598

Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans [E82-10227] p 14 N82-23600

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas [E82-10349] p 19 N82-26747

CRUSTAL FRACTURES

Geoid height-age relation from Seasat altimeter profiles across the Mendocino Fracture Zone p 34 A82-32646

Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832

Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915

CUMULONIMBUS CLOUDS

The onset of the Australian Northwest monsoon during winter MONEX: Broadscale flow revealed by an objective analysis scheme p 56 N82-23912

CUMULUS CLOUDS

The use of contextual information to detect cumulus clouds and cloud shadows in Landsat data p 67 A82-32346

The influence of soil characteristics on regional convection differences above Northern Germany p 10 A82-37589

CURIE TEMPERATURE

Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824

MAGSAT and aeromagnetic data in the North American continent [E82-10193] p 71 N82-22627

CYCLOGENESIS

Analysis of ocean and atmosphere thermodynamical characteristics during the onset of southwest monsoon over the Arabian Sea p 57 N82-23945

D

DAMAGE ASSESSMENT

Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/ p 7 A82-29538

DATA ACQUISITION

Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824

Source assessment system [AD-A111223] p 75 N82-25613

SMS/GOES data collection platform system p 75 N82-26027

DATA BASE MANAGEMENT SYSTEMS

Source assessment system [AD-A111223] p 75 N82-25613

DATA BASES

A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609

Description of historical crop calendar data bases developed to support foreign commodity production forecasting project experiments [E82-10209] p 12 N82-23582

Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

Key Issues in the Analysis of Remote Sensing Data: A report on the workshop [E82-10348] p 85 N82-26746

Exploration into technical procedures for vertical integration --- information systems [NASA-CR-166352] p 75 N82-26763

DATA COLLECTION PLATFORMS

The METEOSAT Data Collection System and its application p 75 N82-26037

DATA CONVERSION ROUTINES

MAGSAT for geomagnetic studies over Indian region [E82-10202] p 72 N82-23575

MAGSAT for geomagnetic studies over Indian region [E82-10296] p 73 N82-24572

DATA CORRELATION

Comparison data for Seasat altimetry in the western North Atlantic p 50 A82-29611

Preliminary evidence for the influence of physiography and scale upon the autocorrelation function of remotely sensed data p 67 A82-32343

Irrigation management with remote sensing --- Navajo Indian Irrigation Project [E82-10357] p 20 N82-26755

DATA LINKS

An optical data link for airborne scanning system p 80 A82-34737

DATA PROCESSING

The processing of satellite navigation data for marine geodesy p 34 A82-37175

Advanced technology for earth observation - Data processing [AAS PAPER 82-130] p 71 A82-37810

Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri. [E82-10186] p 84 N82-22620

Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643

MAGSAT science investigations [E82-10199] p 71 N82-23572

Bathymetric and tectonics of Indian Ocean using MAGSAT data [E82-10204] p 36 N82-23577

AgRISTARS: Foreign commodity production forecasting. The 1980 US corn and soybeans exploratory experiment [E82-10206] p 11 N82-23579

Multistage classification of multispectral Earth observational data: The design approach [E82-10213] p 72 N82-23586

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee [E82-10219] p 13 N82-23592

An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data [E82-10286] p 16 N82-24564

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10306] p 74 N82-24580

MAGSAT scalar and vector anomaly data analysis [E82-10307] p 74 N82-24581

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10317] p 38 N82-24590

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10318] p 38 N82-24591

Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT data [E82-10330] p 38 N82-24603

Aeromagnetic and satellite magnetic anomally mapping [E82-10339] p 39 N82-25601

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements [E82-10313] p 82 N82-26743

Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas [E82-10361] p 20 N82-26759

DATA REDUCTION

The use of prior probabilities in maximum likelihood classification of remotely sensed data p 68 A82-32904

Studies of high latitude current systems using MAGSAT vector data [E82-10188] p 71 N82-22622

MAGSAT and aeromagnetic data in the North American continent [E82-10193] p 71 N82-22627

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10195] p 71 N82-22629

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions [E82-10181] p 85 N82-23568

Investigation of MAGSAT and TRIAD magnetometer data to provide corrective information on high-latitude external fields [E82-10201] p 72 N82-23574

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10226] p 73 N82-23599

Report of MAGSAT project by Survey of India [E82-10293] p 73 N82-24570

Analysis of MAGSAT data of the Indian region [E82-10358] p 75 N82-26756

DATA SAMPLING

Sample design for estimating change in land use and land cover p 24 A82-32711

Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas [E82-10361] p 20 N82-26759

DATA SMOOTHING

Improved definition of crustal magnetic anomalies for MAGSAT data [E82-10314] p 37 N82-24587

DATA SYSTEMS

Design guidelines for satellite image data distribution systems p 70 A82-37048

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor [E82-10231] p 15 N82-23604

DATA TRANSMISSION

Purpose, background of 'Intercosmos-21' mission p 81 N82-24264

DEATH VALLEY (CA)

Possible fault detection in Cottonball Basin, California An application of radar remote sensing p 41 A82-32898

DEER

Application of remote sensing to state and regional problems [E82-10288] p 30 N82-24566

DEFOLIATION

Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730

DEFORESTATION

Monitoring deforestation in the eastern part of the state of Guerrero, Mexico p 9 A82-34733

DEHYDRATION

Remote sensing of leaf water content in the near infrared p 8 A82-32897

DELINEATION

Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139

DENSITY (NUMBER/VOLUME)

OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472

DENSITY DISTRIBUTION

Description of gray level picture using a collection of density contour lines p 66 A82-29409

Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962

DEPOSITS
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas [DE82-005560] p 46 N82-27809

DESERTS
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem p 7 A82-29747
Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441

DIFFRACTION LIMITED CAMERAS
Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658

DIFFUSE RADIATION
Large amplitude undulations on the equatorward boundary of the diffuse aurora p 76 A82-31019

DIGITAL DATA
Detection of regional air pollution episodes utilizing satellite digital data in the visual range p 23 A82-31990
Computation with physical values from Landsat digital data p 68 A82-32709
Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643
Computer-processed geophysical atlas of digital data for the East Coast margin of the United States from surface and spacecraft data [AD-A111388] p 39 N82-25748
Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah [E82-10355] p 19 N82-26753

DIGITAL FILTERS
Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

DIGITAL RADAR SYSTEMS
The estimation of wave height from digitally processed SAR imagery p 67 A82-32347

DIGITAL SYSTEMS
Separation of diffuse from sharp-edged features in digital imagery p 68 A82-34225

DIGITAL TECHNIQUES
Mapping riparian vegetation in Southeastern Oregon using digitized large scale color infra-red aerial photography p 6 A82-29535
Digitally enhanced visual displays facilitate the analysis of Landsat imagery p 67 A82-32507
The response characteristics of vegetation in Landsat MSS digital data p 8 A82-32907
Image processing with microcomputers in remote sensing p 79 A82-34708
Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723
Aerial photography vs. Landsat for digital land-cover mapping in an urban watershed p 61 A82-34745
Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612
Key Issues in the Analysis of Remote Sensing Data: A report on the workshop [E82-10348] p 85 N82-26746

DISCONTINUITY
Satellite observations in FRONTS 80 [AD-A111080] p 58 N82-26766

DISPLAY DEVICES
Source assessment system [AD-A111223] p 75 N82-25613

DIURNAL VARIATIONS
Observation of the diurnal variation of atmospheric ozone p 26 A82-35895
Diurnal changes in reflectance factor due to Sun-row direction interactions [E82-10128] p 11 N82-23566
Registration of Heat Capacity Mapping Mission day and night images [E82-10210] p 72 N82-23583
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10243] p 45 N82-24521
Delineation of soil temperature regimes from HCMM data [E82-10298] p 17 N82-24574
Magnetic and gravity anomalies in the Americas [E82-10312] p 37 N82-24586
Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco [E82-10315] p 74 N82-24588
HCMM hydrological analysis in Utah [E82-10328] p 63 N82-24601
Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes [E82-10359] p 30 N82-26757

DRAINAGE
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625

DRAINAGE PATTERNS
Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil [E82-10291] p 63 N82-24569

DROUGHT
Remote sensing of leaf water content in the near infrared p 8 A82-32897

DYNAMIC CHARACTERISTICS
Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609

DYNAMIC MODELS
Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX) p 56 N82-23900

E

E REGION
Characteristics of field-aligned E-region irregularities over lioka /36 N/, Japan. I p 26 A82-36268

EARTH (PLANET)
Reference coordinate systems for earth dynamics - A preview p 33 A82-32077
Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096
MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599
Models and maps of the main field [E82-10327] p 74 N82-24600

EARTH ALBEDO
Albedo and angular characteristics of the reflectance of the underlying surface and clouds --- Russian book p 33 A82-30849
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891

EARTH ATMOSPHERE
Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405

EARTH CORE
Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962
Investigation of geomagnetic field forecasting and fluid dynamics of the core --- determination of the bundary between the core and mantle of the Earth [E82-10198] p 35 N82-23571
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10310] p 37 N82-24584
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10342] p 39 N82-25604

EARTH CRUST
Initial vector magnetic anomaly map from Magsat p 32 A82-30785
Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788
Verification of the crustal component in satellite magnetic data p 32 A82-30789
Preliminary interpretation of magnetic anomalies over Japan and its surrounding area p 33 A82-30796
Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites p 42 A82-36298
Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962
Structure, composition and thermal state of the crust in Brazil --- geomagnetic survey [E82-10187] p 35 N82-22621
Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44) [E82-10096] p 35 N82-23563
Equivalent source modeling of the main field using MAGSAT data [E82-10151] p 71 N82-23567
Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration [E82-10242] p 36 N82-24520
An equivalent layer magnetization model for the United States derived from MAGSAT data [E82-10297] p 36 N82-24573
Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data [E82-10303] p 36 N82-24577
Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data [E82-10304] p 37 N82-24578
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10308] p 37 N82-24582
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10309] p 37 N82-24583
Magnetic and gravity anomalies in the Americas [E82-10312] p 37 N82-24586
The crustal structure and tectonics of South America [E82-10319] p 38 N82-24592
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent [E82-10321] p 46 N82-24594
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent [E82-10323] p 46 N82-24596
MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599
Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT data [E82-10330] p 38 N82-24603
Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915

EARTH MANTLE
Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962
Investigation of geomagnetic field forecasting and fluid dynamics of the core --- determination of the bundary between the core and mantle of the Earth [E82-10198] p 35 N82-23571
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10308] p 37 N82-24582
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10309] p 37 N82-24583

EARTH MOVEMENTS
Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832

EARTH OBSERVATIONS (FROM SPACE)
Space to the earth --- Russian book on space technology applications p 83 A82-30850
The use of the SPOT satellite in natural resource evaluation p 83 A82-31996
Spectroscopic remote sensing for geological applications p 41 A82-32442
Thematic mapper - An overview of spectral band registration p 77 A82-32447
An optical objective lens for earth observations by satellites p 78 A82-32824
Infrared sensing of sea surface temperature from space p 53 A82-32902
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442
Remote sensing of the earth's resources - The Soviet experience p 84 A82-33555
Earth observations from space - Trends and prospects p 84 A82-34116
ERS-1 European remote sensing satellite p 84 A82-34367
Microwave sensing from space [AAS PAPER 82-127] p 80 A82-37809
Advanced technology for earth observation - Data processing [AAS PAPER 82-130] p 71 A82-37810
Civil land remote sensing system [GPO-87-070] p 84 N82-22630
Radiometer mission requirements for large space antenna systems [NASA-TM-84478] p 81 N82-25610

EARTH PLANETARY STRUCTURE
The definition of the terrestrial coordinate frame by long baseline interferometry p 33 A82-32084
MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599

EARTH RESOURCES
Multi-resource inventory in interior Alaska p 6 A82-29532
The use of the SPOT satellite in natural resource evaluation p 83 A82-31996
Thematic mapper - An overview of spectral band registration p 77 A82-32447

Multispectral mapper - Imaging spectroscopy as applied to the mapping of earth resources p 77 A82-32448
Photogrammetric methods for mapping resource data from high altitude panoramic photography p 77 A82-32702
Aerogeophysical methods of finding uranium deposits --- Russian book p 41 A82-33402
Remote sensing of the earth's resources - The Soviet experience p 84 A82-33555
RAMS-1, a Resource Analysis and Mapping System p 69 A82-34726
Landsat D to yield more precise data p 70 A82-37200
Solid state instrumentation concepts for earth resource observation [AAS PAPER 82-132] p 81 A82-37812
LANDSAT D to test thematic mapper, inaugurate operational system [NASA-NEWS-RELEASE-82-100] p 82 N82-26741

EARTH RESOURCES INFORMATION SYSTEM
A new approach to multiresource inventories using remote sensing and geographic information systems technologies p 25 A82-34739

EARTH RESOURCES PROGRAM
An infrared exposure meter p 76 A82-29541
Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441
High spectral resolution airborne spectrometry p 77 A82-32443
Irrigation management with remote sensing --- Navajo Indian Irrigation Project [E82-10357] p 20 N82-26755

EARTH RESOURCES SHUTTLE IMAGING RADAR
OSTA-1 Post Mission Operation Report [NASA-TM-84191] p 84 N82-23258

EARTH ROTATION
On reference coordinate systems used in polar motion determinations p 33 A82-32090

EARTH SATELLITES
Cost-effectiveness of geographic surveying from space p 85 N82-24263

EARTH SURFACE
Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905
Relating Landsat digital count values to ground reflectance for optically thin atmospheric conditions p 66 A82-29762
Albedo and angular characteristics of the reflectance of the underlying surface and clouds --- Russian book p 33 A82-30849
Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766
Experimental assessment of improved spatial resolution LANDSAT data [AD-A110538] p 75 N82-26765

EARTH TIDES
Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306

EARTHQUAKES
Geodetic monitoring of tectonic deformation: Toward a strategy [NASA-CR-168784] p 35 N82-22846
Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915

ECOLOGY
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913
Use and applicability of the vegetation component of the national site classification system --- Sumter National Forest, South Carolina [E82-10234] p 15 N82-23607

ECOSYSTEMS
Agricultural Research Service research highlights in remote sensing for calendar year 1980 [E82-10228] p 14 N82-23601

ELECTRIC CURRENT
Studies of high latitude current systems using MAGSAT vector data [E82-10188] p 71 N82-22622
Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10309] p 37 N82-24583
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

ELECTRIC FIELDS
Generation of the auroral kilometric radiation p 26 A82-35542

ELECTROMAGNETIC FIELDS
Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism p 64 A82-22575

ELECTROMAGNETIC SHIELDING
Effective electromagnetic shielding in multilayer printed circuit boards [AIAA 81-2333] p 59 A82-13528

ELECTRON DIFFUSION
Convective outflow of cosmic rays from the Galaxy and background radio emission p 83 A82-22551

ELECTRON ENERGY
The electron and positron spectra in primary cosmic rays p 1 A82-22543
Generation of the auroral kilometric radiation p 26 A82-35542

ELECTRON FLUX DENSITY
The model of the cosmic ray enrichment by helium-3 p 31 A82-22614

ELECTROPHOTOMETERS
Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

ELEMENTARY PARTICLE INTERACTIONS
Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577

EMISSION SPECTRA
The cosmic ray positron spectrum p 1 A82-22542
Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553
Stratospheric emission data analysis [AD-A112337] p 76 N82-26907

EMISSIVITY
Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey p 82 A82-22549
Emissivity and reflectance of the model sea surface for the use of AVHRR data of NOAA satellites p 52 A82-31294
Remote sensing of thermal subsurface terrain properties p 80 A82-34727

ENERGETIC PARTICLES
Comparative abundances in solar energetic particles and in galactic cosmic ray sources, and the Ne-22 anomaly p 83 A82-22556
Acceleration of cosmic rays in accretion shocks p 64 A82-22568
Observations of interplanetary energetic charged particles from gamma-ray line solar flares p 65 A82-22586
High-energy solar protons p 22 A82-22588
The relation of type II radio bursts to solar energetic particles observed at earth p 3 A82-22591
Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593
Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594
Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598
Time and energy dependence of heavy ion abundances in solar flare energetic particle events p 22 A82-22605
High resolution measurements of solar flare isotopes p 22 A82-22606
Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607
Is the neon composition of our sun, planetary or solar p 76 A82-22608
A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609
On the anticorrelation between the He/3//He/4/ ratio and proton intensity in He/3/ rich flares p 40 A82-22613

ENERGY BUDGETS
Ammonia and the NOx budget of the troposphere p 27 A82-36293

ENERGY DISSIPATION
Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552
Coulombian energy losses and the nuclear composition of the solar cosmic rays p 4 A82-22610

ENERGY SPECTRA
On the characteristics of the very low energy galactic cosmic rays in the interstellar space p 63 A82-22540
The electron and positron spectra in primary cosmic rays p 1 A82-22543
Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545
Extragalactic cosmic rays, their sources and spectrum p 40 A82-22574
Model for solar hard X-ray bursts p 65 A82-22581
Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587
A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon p 4 A82-22592
Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593
Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594
Preflare increases in solar cosmic rays relevant to the mode of energy accumulation in the active regions associated with large flares p 31 A82-22595
A comparison of helium and heavy ion spectra in He/3/ rich solar flares with a model calculation p 5 A82-22612
11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616
The energy spectra of cosmic ray variations inferred from the stratospheric measurements in 1972-1979 p 5 A82-22617

ENTHALPY
Analysis of ocean and atmosphere thermodynamical characteristics during the onset of southwest monsoon over the Arabian Sea p 57 N82-23945

ENVIRONMENT EFFECTS
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913

ENVIRONMENT POLLUTION
Environmental monitoring report of the Lawrence Berkeley Laboratory, 1980 [LBL-12604] p 29 N82-23793

ENVIRONMENTAL MONITORING
Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 22 A82-29327
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem p 7 A82-29747
Aircraft monitoring of surface carbon dioxide exchange p 23 A82-30293
EPA's new bubble and banking policies --- for environmental monitoring p 25 A82-33865
Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730
Monitoring deforestation in the eastern part of the state of Guerrero, Mexico p 9 A82-34733
Space science for applications - The history of Landsat p 84 A82-36617
Environmental monitoring report of the Lawrence Berkeley Laboratory, 1980 [LBL-12604] p 29 N82-23793
History of the French satellite space program p 85 N82-24216

ENVIRONMENTAL RESEARCH SATELLITES
ERS-1 European remote sensing satellite p 84 A82-34367

EQUATORIAL ELECTROJET
MAGSAT for geomagnetic studies over Indian region [E82-10296] p 73 N82-24572

EQUATORIAL REGIONS
Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes, part 2 [E82-10325] p 30 N82-24598

ERROR ANALYSIS
Seasat altimeter timing bias estimation p 50 A82-29609
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
A practical study of gross-error detection in bundle adjustment p 69 A82-34702
A quantitative method to test for similarity between photo interpreters p 69 A82-34722
Dobson spectrophotometer calibrations, possible errors in ozone absorption coefficients, and errors due to interfering pollutant gases p 28 A82-36431

ERS-1 (ESA SATELLITE)
ERS-1 European remote sensing satellite p 84 A82-34367

ESTIMATES
Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588
AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment [E82-10216] p 13 N82-23589

ESTIMATING
Sample design for estimating change in land use and land cover p 24 A82-32711
A statistical approach to rainfall estimation using satellite and conventional data [NOAA-TR-NESS-89] p 63 N82-22854
A comparison of stratified versus regression estimators p 11 N82-23133

ESTUARIES
Remote sensing in Scotland using data received from satellites - A study of the Tay Estuary region using Landsat multispectral scanning imagery p 62 A82-37501

EUROPE
Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44)
[E82-10096] p 35 N82-23563
Aeromagnetic and satellite magnetic anomally mapping
[E82-10339] p 39 N82-25601

EUROPEAN SPACE AGENCY
ERS-1 European remote sensing satellite
p 84 A82-34367

EVALUATION
LANDSAT-D conical scanner evaluation plan
[E82-10340] p 81 N82-25602

EVAPORATION
A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri
[E82-10311] p 17 N82-24585

EVAPORATION RATE
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590

EVAPOTRANSPIRATION
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590
AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions
[E82-10225] p 14 N82-23598

EXPERIMENTAL DESIGN
The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

EXPLORATION
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 44 N82-23635

EXTRAGALACTIC RADIO SOURCES
Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553

F

FAR INFRARED RADIATION
Thermography - A remote sensing method with many perspectives p 76 A82-29922

FARM CROPS
Remote sensing of the weediness of crop fields
p 5 A82-29435
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623
Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590
AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee
[E82-10219] p 13 N82-23592

FARMLANDS
Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576
Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming
[E82-10356] p 20 N82-26754
Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas
[E82-10361] p 20 N82-26759

FELSITE
Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites
p 42 A82-36298

FERTILIZERS
Color aerial photography detects nutrient status of loblolly pine plantations p 6 A82-29531

FIELD THEORY (PHYSICS)
Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism
p 64 A82-22575

FINITE ELEMENT METHOD
Nonlinear theory for elastic beams and rods and its finite element representation
[WTHD-143] p 73 N82-24517

FIRE DAMAGE
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913

FIRE PREVENTION
Remote automatic weather station for resource and fire management agencies
[PB82-107335] p 30 N82-23963

FISHERIES
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 56 N82-26944

FLAT PATTERNS
Subtleties in the flat-fielding of charge-coupled device /CCD/ images p 68 A82-32581

FLIGHT PATHS
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634

FLORIDA
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula
[E82-10299] p 17 N82-24575
Forest Resource Information System. Phase 3: System transfer report
[E82-10344] p 18 N82-25606

FLOW MEASUREMENT
Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

FLUID DYNAMICS
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10342] p 39 N82-25604

FLUID FLOW
Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

FOCUSING
Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

FOG
Some empirical rules for forecasting fog and status over northern Florida, southern Georgia and adjacent coastal waters
[PB82-154006] p 59 N82-27949

FOLIAGE
Remote sensing of leaf water content in the near infrared p 8 A82-32897
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans
[E82-10227] p 14 N82-23600

FORBUSH DECREASES
The approximate 1 GeV solar cosmic rays in the Forbush-effect of February 15, 1978 p 40 A82-22604

FORECASTING
AgRISTARS: Foreign commodity production forecasting. The 1980 US corn and soybeans exploratory experiment
[E82-10206] p 11 N82-23579
Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588
AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment
[E82-10216] p 13 N82-23589

FOREST MANAGEMENT
Development and application of panoramic aerial photography in forest pest management
p 5 A82-29527
Panoramic aerial photography in forest pest management p 7 A82-32701
Optical bar panoramic photography for planning timber salvage in drought-stressed forests p 7 A82-32705
Landsat detection of hardwood forest clearcuts
p 8 A82-32708
Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597
Forest Resource Information System. Phase 3: System transfer report
[E82-10344] p 18 N82-25606

FORESTS
Application of 35mm color aerial photography to forest land change detection p 6 A82-29533
Evaluation of spruce-fir forests using small-format photographs p 8 A82-32707
Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731
Water-balance differentiation of natural complexes on the basis of satellite photographs p 61 A82-35129
Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139
Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri.
[E82-10186] p 84 N82-22620
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597
Use and applicability of the vegetation component of the national site classification system --- Sumter National Forest, South Carolina
[E82-10234] p 15 N82-23607
An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563
Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565
Identifying environmental features for land management decisions --- Utah
[E82-10289] p 30 N82-24567
Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

FOURIER ANALYSIS
Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723

FOURIER TRANSFORMATION
Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723

FRAGMENTATION
Fragmentation of Fe nuclei on carbon, hydrogen and CH2 targets. I - Individual charge changing and total cross sections. II - Isotopic cross sections --- for interstellar cosmic ray propagation p 63 A82-22538

FRANCE
Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study
[E82-10190] p 42 N82-22624

FREEZING
AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions
[E82-10225] p 14 N82-23598

FRENCH SPACE PROGRAMS
History of the French satellite space program
p 85 N82-24216

FRESH WATER
Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska
[AD-A110806] p 58 N82-26764

G

GALACTIC NUCLEI
Origin of cosmic rays in galactic centre sources
p 3 A82-22571
Acceleration processes near massive black holes
p 3 A82-22572

GALACTIC RADIATION
On the characteristics of the very low energy galactic cosmic rays in the interstellar space p 63 A82-22540
Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545
Antiprotons from galactic sources of cosmic rays and gamma rays p 82 A82-22546
Confinement and acceleration of cosmic rays in galactic superbubbles p 82 A82-22547
Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey
p 82 A82-22549
Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550
Comparative abundances in solar energetic particles and in galactic cosmic ray sources, and the Ne-22 anomaly
p 83 A82-22556
Physical state of the birth place of cosmic rays and its implication to the acceleration processes
p 2 A82-22559
On volatility, first ionization potential, and s- and r-processes --- for Galactic cosmic ray sources
p 2 A82-22560
Interstellar grains as seeds for galactic cosmic rays
p 2 A82-22561

Origin of galactic cosmic rays from Ne isotopic composition p 2 A82-22563
The galactic origin of cosmic rays. I
[CONF-810711-1] p 2 A82-22565
Acceleration of cosmic rays in accretion shocks p 64 A82-22568
The galactic origin of cosmic rays. II
[CONF-810711-2] p 64 A82-22573
Extragalactic cosmic rays, their sources and spectrum p 40 A82-22574
International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3 p 65 A82-22580
The approximate 1 GeV solar cosmic rays in the Forbush-effect of February 15, 1978 p 40 A82-22604
The modulation characteristics of the 19th and 20th solar activity cycles p 59 A82-22615

GALACTIC RADIO WAVES
Convective outflow of cosmic rays from the Galaxy and background radio emission p 83 A82-22551

GAMMA RAY ASTRONOMY
Confinement and acceleration of cosmic rays in galactic superbubbles p 82 A82-22547
Origin of cosmic rays in galactic centre sources p 3 A82-22571
Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577
Solar gamma-ray experiment on Astro-A satellite p 21 A82-22583
Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

GAMMA RAY SPECTRA
Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584
Observations of interplanetary energetic charged particles from gamma-ray line solar flares p 65 A82-22586
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1
[DE82-004151] p 45 N82-23643
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2
[DE82-004166] p 45 N82-23644
Airborne gamma-ray spectrometer and magnetometer survey: Susanville quadrangle, California, volume 1
[DE82-005538] p 48 N82-27811
Airborne gamma-ray spectrometer and magnetometer survey: Roseburg quadrangle, Oregon, volume 2
[DE82-005568] p 48 N82-27812

GAMMA RAY SPECTROMETERS
Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 44 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranegle, Alaska, volume 2
[DE82-000342] p 46 N82-25623
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 47 N82-27804
NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle
[DE82-005527] p 48 N82-27810
Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota
[DE82-005540] p 48 N82-27814
Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California
[DE82-005543] p 48 N82-27815

GAMMA RAYS
Antiprotons from galactic sources of cosmic rays and gamma rays p 82 A82-22546
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 47 N82-27805

GAS DETECTORS
Aircraft monitoring of surface carbon dioxide exchange p 23 A82-30293
Breadboard gas filter correlation spectrometer for atmospheric measurement of hydrazines and nitrogen dioxide
[AD-A110688] p 82 N82-26842

GAS EXCHANGE
Aircraft monitoring of surface carbon dioxide exchange p 23 A82-30293

GAS TRANSPORT
Comparison of ozone in polluted and clean air masses over Lake Michigan p 29 A82-36477

GEOBOTANY
The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana
[E82-10341] p 46 N82-25603

GEOCENTRIC COORDINATES
Establishment of terrestrial reference frames by new observational techniques p 33 A82-32078
Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099

GEODESY
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
Gravity model improvement for Seasat p 32 A82-29615
Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306
Reference coordinate systems for earth dynamics - A preview p 33 A82-32077
Geodetic monitoring of tectonic deformation: Toward a strategy
[NASA-CR-168784] p 35 N82-22846

GEODETIC COORDINATES
Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099
Investigations of point transfer p 78 A82-33296
The processing of satellite navigation data for marine geodesy p 34 A82-37175

GEODETIC SURVEYS
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
Seasat altimeter timing bias estimation p 50 A82-29609
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293
The simultaneous employment of geodetic measurements for block adjustments using the method of independent models p 34 A82-33295
Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832
Geodetic monitoring of tectonic deformation: Toward a strategy
[NASA-CR-168784] p 35 N82-22846
Seismic and geodetic studies of the Imperial Valley, California
[DE82-001686] p 39 N82-26915

GEODYNAMICS
Establishment of terrestrial reference frames by new observational techniques p 33 A82-32078
Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293
Investigation of geomagnetic field forecasting and fluid dynamics of the core --- determination of the bundary between the core and mantle of the Earth
[E82-10196] p 35 N82-23571

GEOGRAPHY
Impacts of remote sensing on U.S. geography p 24 A82-32899
Exploration into technical procedures for vertical integration --- information systems
[NASA-CR-166352] p 75 N82-26763

GEOIDS
Geoid height-age relation from Seasat altimeter profiles across the Mendocino Fracture Zone p 34 A82-32646

GEOLOGICAL FAULTS
Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/ p 41 A82-30305
Possible fault detection in Cottonball Basin, California An application of radar remote sensing p 41 A82-32898
Comparing lineaments interpreted from Landsat imagery and topographic maps with reported faults in southwest Montana p 34 A82-34719
Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

GEOLOGICAL SURVEYS
Magsat scalar anomaly distribution - The global perspective p 41 A82-30786
Aerogeophysical methods of finding uranium deposits --- Russian book p 41 A82-33402
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee p 34 A82-34918
Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1
[DE82-001029] p 43 N82-23625
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 44 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 44 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1
[DE82-004152] p 45 N82-23641
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2
[DE82-004164] p 45 N82-23642
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10243] p 45 N82-24521
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10321] p 46 N82-24594
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10323] p 46 N82-24596
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranagle, Alaska, volume 2
[DE82-000342] p 46 N82-25623
An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon
[E82-10352] p 47 N82-26750
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 47 N82-27804
Airborne gamma-ray spectrometer and magnetometer survey: Susanville quadrangle, California, volume 1
[DE82-005538] p 48 N82-27811

GEOLOGY
Geodetic monitoring of tectonic deformation: Toward a strategy
[NASA-CR-168784] p 35 N82-22846

GEOMAGNETIC HOLLOW
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee p 34 A82-34918

GEOMAGNETISM
Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304
Magnetic charts of Canada derived from Magsat data p 32 A82-30778
Initial scalar magnetic anomaly map from Magsat p 32 A82-30784
Initial vector magnetic anomaly map from Magsat p 32 A82-30785
Magsat scalar anomaly distribution - The global perspective p 41 A82-30786
Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787
Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788
Verification of the crustal component in satellite magnetic data p 32 A82-30789
A preliminary comparison of the Magsat data and aeromagnetic data in the continental U.S. p 32 A82-30790
A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795
Preliminary interpretation of magnetic anomalies over Japan and its surrounding area p 33 A82-30796
Observed magnetic substorm signatures at synchronous altitude p 26 A82-35534
Structure, composition and thermal state of the crust in Brazil --- geomagnetic survey
[E82-10187] p 35 N82-22621
Studies of high latitude current systems using MAGSAT vector data
[E82-10188] p 71 N82-22622
MAGSAT and aeromagnetic data in the North American continent
[E82-10193] p 71 N82-22627
Study of gravity and magnetic anomalies using MAGSAT data
[E82-10194] p 35 N82-22628
Equivalent source modeling of the main field using MAGSAT data
[E82-10151] p 71 N82-23567

Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569

Analyses of MAGSAT tracks crossing the study region in the Indian Ocean
[E82-10197] p 71 N82-23570

Investigation of geomagnetic field forecasting and fluid dynamics of the core --- determination of the bundary between the core and mantle of the Earth
[E82-10198] p 35 N82-23571

MAGSAT science investigations
[E82-10199] p 71 N82-23572

Investigation of MAGSAT and TRIAD magnetometer data to provide corrective information on high-latitude external fields
[E82-10201] p 72 N82-23574

MAGSAT for geomagnetic studies over Indian region
[E82-10202] p 72 N82-23575

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10226] p 73 N82-23599

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10232] p 73 N82-23605

Investigation from Japanese MAGSAT team
[E82-10239] p 73 N82-23612

Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT
[E82-10240] p 73 N82-23613

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 44 N82-23635

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004166] p 44 N82-23636

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637

Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration
[E82-10242] p 36 N82-24520

Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere
[E82-10244] p 36 N82-24522

Report of MAGSAT project by Survey of India
[E82-10293] p 73 N82-24570

MAGSAT for geomagnetic studies over Indian region
[E82-10296] p 73 N82-24572

An equivalent layer magnetization model for the United States derived from MAGSAT data
[E82-10297] p 36 N82-24573

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10306] p 74 N82-24580

MAGSAT scalar and vector anomaly data analysis
[E82-10307] p 74 N82-24581

Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10310] p 37 N82-24584

Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586

Improved definition of crustal magnetic anomalies for MAGSAT data
[E82-10314] p 37 N82-24587

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10316] p 38 N82-24589

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10317] p 38 N82-24590

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10318] p 38 N82-24591

Report of investigation from Japanese MAGSAT Team
[E82-10322] p 74 N82-24595

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes, part 2
[E82-10325] p 30 N82-24598

MAGSAT anomaly map and continental drift
[E82-10326] p 38 N82-24599

Models and maps of the main field
[E82-10327] p 74 N82-24600

Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT data
[E82-10330] p 38 N82-24603

Aeromagnetic and satellite magnetic anomally mapping
[E82-10339] p 39 N82-25601

Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10342] p 39 N82-25604

A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations
[AD-A110765] p 39 N82-26268

Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes
[E82-10359] p 30 N82-26757

The Earth's gravity field to degree and order 180 using SEASAT altimeter data, terrestrial gravity data and other data
[AD-A113098] p 40 N82-27900

GEOMETRIC RECTIFICATION (IMAGERY)

Evaluation of temporal registration of Landsat scenes
p 67 A82-32345

Evaluation of VICAR software capability for land information support system needs --- Elk River quadrangle, Idaho
[E82-10223] p 73 N82-23596

GEOMORPHOLOGY

Preliminary evidence for the influence of physiography and scale upon the autocorrelation function of remotely sensed data p 67 A82-32343

Soufriere Volcano, St. Vincent - Observations of its 1979 eruption from the ground, aircraft, and satellites
p 24 A82-33652

Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana
[OGMR-56] p 42 N82-22636

Analyses of MAGSAT tracks crossing the study region in the Indian Ocean
[E82-10197] p 71 N82-23570

Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

GEOPHYSICAL FLUIDS

Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10342] p 39 N82-25604

GEOPHYSICAL SATELLITES

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
p 34 A82-34918

GEOPHYSICS

Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099

Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576

Computer-processed geophysical atlas of digital data for the East Coast margin of the United States from surface and spacecraft data
[AD-A111388] p 39 N82-25748

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 47 N82-27804

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 47 N82-27808

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas
[DE82-005560] p 48 N82-27809

NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle
[DE82-005527] p 48 N82-27810

Airborne gamma-ray spectrometer and magnetometer survey: Susanville quadrangle, California, volume 1
[DE82-005538] p 48 N82-27811

Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota
[DE82-005540] p 48 N82-27814

Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California
[DE82-005543] p 48 N82-27815

GEOS 3 SATELLITE

A search for seamounts in the southern Cook and Austral region p 52 A82-30810

GLACIERS

The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174

GLINT

The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169083] p 57 N82-26525

GLOBAL ATMOSPHERIC RESEARCH PROGRAM

The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

Mean sea-level pressure in the Southern Hemisphere during the FGGE period --- First Global Atmospheric Research Program Global Experiment (FGGE); buoys
p 55 N82-23856

Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891

Short term influence radius of monsoonal overturnings --- First Global Atmospheric Research Program Global Experiment (FGGE) p 56 N82-23898

Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX)
p 56 N82-23900

GLOBAL POSITIONING SYSTEM

A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations
[AD-A110765] p 39 N82-26268

GOES SATELLITES

Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735

SMS/GOES data collection platform system
p 75 N82-26027

GOVERNMENT/INDUSTRY RELATIONS

Civil land remote sensing system
[GPO-87-070] p 84 N82-22630

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions
[E82-10181] p 85 N82-23568

GOVERNMENTS

A legislator's guide to LANDSAT
[E82-10290] p 85 N82-24568

GRAINS (FOOD)

Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa
[E82-10221] p 13 N82-23594

Evaluation of the procedure for separating barley from other spring small grains --- North Dakota, South Dakota, Minnesota and Montana
[E82-10230] p 14 N82-23603

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor
[E82-10231] p 15 N82-23604

Description of the FORTRAN implementation of the spring small grains planting date distribution model
[E82-10235] p 15 N82-23608

GRASSLANDS

Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri.
[E82-10186] p 84 N82-22620

A multi-frequency radiometric measurement of soil moisture content over bare and vegetated fields
[E82-10238] p 16 N82-23611

GRAVIMETRY

Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306

GRAVITATIONAL FIELDS

Gravity model improvement for Seasat
p 32 A82-29615

The Earth's gravity field to degree and order 180 using SEASAT altimeter data, terrestrial gravity data and other data
[AD-A113098] p 40 N82-27900

GRAVITY ANOMALIES

Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304

Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306

Study of gravity and magnetic anomalies using MAGSAT data
[E82-10194] p 35 N82-22628

Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569

Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration
[E82-10242] p 36 N82-24520
Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data
[E82-10303] p 36 N82-24577
The mineralogy of global magnetic anomalies --- rock magnetic signatures and MAGSAT geological, and gravity correlations in West Africa
[E82-10305] p 45 N82-24579
Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586
Geotectonics of South America --- regional magnetic and gravity anomalies of South America
[E82-10320] p 38 N82-24593
Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748
The Earth's gravity field to degree and order 180 using SEASAT altimeter data, terrestrial gravity data and other data
[AD-A113098] p 40 N82-27900

GRAVITY GRADIOMETERS
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas
[DE82-005560] p 48 N82-27809

GRAVITY WAVES
The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623

GREAT LAKES (NORTH AMERICA)
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640

GREAT PLAINS CORRIDOR (NORTH AMERICA)
AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment
[E82-10126] p 11 N82-23565
Evaluation of the procedure for separating barley from other spring small grains --- North Dakota, South Dakota, Minnesota and Montana
[E82-10230] p 14 N82-23603
AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor
[E82-10231] p 15 N82-23604

GREAT SALT LAKE (UT)
Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752

GREEN WAVE EFFECT
Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626

GREENLAND
The METEOSAT Data Collection System and its application p 75 N82-26037

GROUND SPEED
Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314

GROUND TRUTH
Field size, length, and width distributions based on LACIE ground truth data --- large area crop inventory experiment p 8 A82-32909
Measuring sea surface temperature from satellites - A ground truth approach p 54 A82-32917
The use of Landsat-3 thermal data to help differentiate land covers p 25 A82-34218
Method for the analysis of the melting of a firn complex on the basis of aerospace photographs
p 61 A82-35133
Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626
SEASAT: A satellite scatterometer illumination times of selected in situ sites
[NASA-TM-83280] p 81 N82-22865
AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment
[E82-10216] p 13 N82-23589
An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data
[E82-10286] p 16 N82-24564
The mineralogy of global magnetic anomalies --- rock magnetic signatures and MAGSAT geological, and gravity correlations in West Africa
[E82-10305] p 45 N82-24579
Irrigation management with remote sensing --- Navajo Indian Irrigation Project
[E82-10357] p 20 N82-26755
Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes
[E82-10359] p 30 N82-26757
Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas
[E82-10361] p 20 N82-26759

GROUND WATER
Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota
[E82-10329] p 18 N82-24602

GROUND WIND
Surface wind analyses for Seasat p 51 A82-29619

GULF OF MEXICO
A ship and satellite view of hydrographic features in the western Gulf of Mexico p 53 A82-32651

GULF STREAM
Comparison data for Seasat altimetry in the western North Atlantic p 50 A82-29611

H

HABITATS
Inventory of wildlife habitat from color infrared aerial photography for Cobb Island, Virginia p 6 A82-29529
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem
p 7 A82-29747
A computerized spatial analysis system for assessing wildlife habitat from vegetation maps p 9 A82-34716
Application of remote sensing to state and regional problems
[E82-10288] p 30 N82-24566
Identifying environmental features for land management decisions --- Utah
[E82-10289] p 30 N82-24567
Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752
Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

HARMONIC ANALYSIS
Gravity model improvement for Seasat
p 32 A82-29615

HAZE
Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766

HEAT FLUX
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10313] p 82 N82-26743

HEAT ISLANDS
A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St Louis, Missouri
[E82-10311] p 17 N82-24585

HEAT TRANSMISSION
Remote sensing of thermal subsurface terrain properties p 80 A82-34727

HEAVY IONS
Time and energy dependence of heavy ion abundances in solar flare energetic particle events
p 22 A82-22605
A comparison of helium and heavy ion spectra in He/3/ rich solar flares with a model calculation
p 5 A82-22612

HEAVY NUCLEI
Fragmentation of Fe nuclei on carbon, hydrogen and CH2 targets. I - Individual charge changing and total cross sections. II - Isotopic cross sections --- for interstellar cosmic ray propagation p 63 A82-22538
A report on the 'cosmic ray propagation problem'
p 1 A82-22539
Heavy-element abundances in He/3/-rich events
p 5 A82-22611

HELIOSPHERE
Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

HELIUM ISOTOPES
Heavy-element abundances in He/3/-rich events
p 5 A82-22611
A comparison of helium and heavy ion spectra in He/3/ rich solar flares with a model calculation
p 5 A82-22612
On the anticorrelation between the He/3//He/4/ ratio and proton intensity in He/3/ rich flares
p 40 A82-22613
The model of the cosmic ray enrichment by helium-3
p 31 A82-22614

HIGH ALTITUDE
Estimating mountain pine beetle-killed ponderosa pine over the front range of Colorado with high altitude panoramic photography p 7 A82-32704

HIGH ALTITUDE TESTS
Image quality and height measurement accuracy of serial survey camera imagery from high altitudes
p 78 A82-33297

HIGH ENERGY ELECTRONS
Origin of cosmic rays in galactic centre sources
p 3 A82-22571
A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon
p 4 A82-22592

HIGH RESOLUTION
High spectral resolution airborne spectrometry
p 77 A82-32443
Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer
p 8 A82-34179

HIGH TEMPERATURE PLASMAS
Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557

HISTOGRAMS
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1
[DE82-001031] p 43 N82-23621
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 44 N82-23638

HISTORIES
Space science for applications - The history of Landsat p 84 A82-36617

HURRICANES
Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624

HYDRAZINES
Breadboard gas filter correlation spectrometer for atmospheric measurement of hydrazines and nitrogen dioxide
[AD-A110688] p 82 N82-26642

HYDROCARBONS
Landsat in the search for Appalachian hydrocarbons
p 42 A82-34721

HYDRODYNAMICS
The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period
p 61 A82-35132

HYDROGEN ATOMS
Interactions of cosmic rays with molecular clouds
p 82 A82-22548

HYDROGEOLOGY
Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study
[E82-10190] p 42 N82-22624

HYDROGRAPHY
A ship and satellite view of hydrographic features in the western Gulf of Mexico p 53 A82-32651
Bias correction procedures for airborne laser hydrography
[PB82-130089] p 63 N82-22644

HYDROLOGY
Automated classification of runoff coefficients from Landsat multispectral data p 60 A82-34734
Study of the hydrological cycle by aerospace methods --- Russian book p 61 A82-35126
Principles and methods of the study of the hydrological cycle on the basis of aerospace data p 61 A82-35127
Water-balance differentiation of natural complexes on the basis of satellite photographs p 61 A82-35129
The possibility of using remote-sensing methods to study the hydrology of elementary watersheds
p 61 A82-35130
The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada
[E82-10191] p 62 N82-22625
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590
AgRISTARS: Agriculture and resources inventory surveys through aerospace remote sensing
[E82-10236] p 15 N82-23609
HCMM hydrological analysis in Utah
[E82-10328] p 63 N82-24601

Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group [NASA-TM-84731] p 18 N82-25608

The METEOSAT Data Collection System and its application p 75 N82-26037

Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska [AD-A110806] p 58 N82-26764

HYGROSCOPICITY

Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge [E82-10217] p 13 N82-23590

I

ICE FORMATION

Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609

Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska [AD-A110806] p 58 N82-26764

ICE MAPPING

The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174

Movement of ice markers measured by satellite ranging [R-240] p 59 N82-27816

ICE REPORTING

Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609

IDAHO

Evaluation of VICAR software capability for land-information support system needs --- Elk River quadrangle, Idaho [E82-10223] p 73 N82-23596

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming [E82-10356] p 20 N82-26754

ILLINOIS

Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa [E82-10221] p 13 N82-23594

IMAGE CORRELATORS

Analytical processing of photographs taken by paired cameras p 79 A82-34471

IMAGE ENHANCEMENT

Digitally enhanced visual displays facilitate the analysis of Landsat imagery p 67 A82-32507

Terrain analysis from Landsat using a color TV enhancement system p 68 A82-32911

Separation of diffuse from sharp-edged features in digital imagery p 68 A82-34225

Evaluation of the effectiveness of systematic image distortion compensation p 69 A82-34469

Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images p 70 A82-35141

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains [E82-10205] p 11 N82-23578

IMAGE MOTION COMPENSATION

Evaluation of the effectiveness of systematic image distortion compensation p 69 A82-34469

IMAGE PROCESSING

Development of three-dimensional spatial displays using a geographically based information system p 66 A82-29326

The use of residual images in Landsat image analysis p 66 A82-29328

Description of gray level picture using a collection of density contour lines p 66 A82-29409

Evaluation of temporal registration of Landsat scenes p 67 A82-32345

The estimation of wave height from digitally processed SAR imagery p 67 A82-32347

Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658

Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer p 8 A82-34179

Coastal environment change analysis by Landsat MSS data p 54 A82-34219

Separation of diffuse from sharp-edged features in digital imagery p 68 A82-34225

A practical study of gross-error detection in bundle adjustment p 69 A82-34702

Image processing with microcomputers in remote sensing p 79 A82-34708

An information-theoric spatial transform p 69 A82-34717

Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743

Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139

Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images p 70 A82-35141

Design guidelines for satellite image data distribution systems p 70 A82-37048

Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri. [E82-10186] p 84 N82-22620

Registration of Heat Capacity Mapping Mission day and night images [E82-10210] p 72 N82-23583

Evaluation of VICAR software capability for land information support system needs --- Elk River quadrangle, Idaho [E82-10223] p 73 N82-23596

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10243] p 45 N82-24521

Delineation of soil temperature regimes from HCMM data [E82-10298] p 17 N82-24574

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain [E82-10300] p 17 N82-24576

Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco [E82-10315] p 74 N82-24588

Forest Resource Information System. Phase 3: System transfer report [E82-10344] p 18 N82-25606

Image understanding research [AD-A110746] p 74 N82-25611

Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

Coordination of stereo image registration and pixel classification [AD-A111307] p 75 N82-25614

Key Issues in the Analysis of Remote Sensing Data: A report on the workshop [E82-10348] p 85 N82-26746

IMAGE RESOLUTION

Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery p 68 A82-32916

Image quality and height measurement accuracy of serial survey camera imagery from high altitudes p 78 A82-33297

Spatial resolution requirements for urban studies p 29 A82-37502

Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas [E82-10351] p 19 N82-26749

IMAGING TECHNIQUES

Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440

Subtleties in the flat-fielding of charge-coupled device /CCD/ images p 68 A82-32581

Evaluation of the effectiveness of systematic image distortion compensation p 69 A82-34469

Bathymetric imaging p 69 A82-34720

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

Coordination of stereo image registration and pixel classification [AD-A111307] p 75 N82-25614

INDIA

MAGSAT for geomagnetic studies over Indian region [E82-10202] p 72 N82-23575

On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909

Report of MAGSAT project by Survey of India [E82-10293] p 73 N82-24570

MAGSAT for geomagnetic studies over Indian region [E82-10296] p 73 N82-24572

Analysis of MAGSAT data of the Indian region [E82-10358] p 75 N82-26756

INDIAN OCEAN

Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788

Analyses of MAGSAT tracks crossing the study region in the Indian Ocean [E82-10197] p 71 N82-23570

Bathymetric and tectonics of Indian Ocean using MAGSAT data [E82-10204] p 36 N82-23577

Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data [E82-10303] p 36 N82-24577

Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data [E82-10304] p 37 N82-24578

INDIANA

Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa [E82-10221] p 13 N82-23594

INDUSTRIAL AREAS

Site selection and engineering issues for a major industrial complex - Application of image and map interpretation p 25 A82-34711

INDUSTRIAL WASTES

Problems of the interpretation of aerial and satellite images of industrial smoke p 23 A82-30307

INERTIAL COORDINATES

Reference coordinate systems for earth dynamics - A preview p 33 A82-32077

INFESTATION

Development and application of panoramic aerial photography in forest pest management p 5 A82-29527

Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536

Estimating bark beetle-killed lodgepole pine with high altitude panoramic photography p 7 A82-32703

Estimating mountain pine beetle-killed ponderosa pine over the front range of Colorado with high altitude panoramic photography p 7 A82-32704

Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730

INFORMATION DISSEMINATION

Design guidelines for satellite image data distribution systems p 70 A82-37048

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions [E82-10181] p 85 N82-23568

INFORMATION SYSTEMS

Cost-effectiveness of geographic surveying from space p 85 N82-24263

Forest Resource Information System. Phase 3: System transfer report [E82-10344] p 18 N82-25606

Exploration into technical procedures for vertical integration --- information systems [NASA-CR-166352] p 75 N82-26763

INFORMATION THEORY

An information-theoric spatial transform p 69 A82-34717

Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962

INFRARED DETECTORS

An infrared exposure meter p 76 A82-29541

INFRARED IMAGERY

Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 22 A82-29327

Remote sensing of leaf water content in the near infrared p 8 A82-32897

View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914

Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery p 68 A82-32916

Satellite radiation measurements for the retrieval of the vertical temperature profiles p 70 A82-36935

Determination of winter temperature patterns, fronts, and surface currents in the Yellow Sea and East China Sea from satellite imagery p 55 A82-37195

Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196

A statistical approach to rainfall estimation using satellite and conventional data [NOAA-TR-NESS-89] p 63 N82-22854

Registration of Heat Capacity Mapping Mission day and night images [E82-10210] p 72 N82-23583

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula [E82-10299] p 17 N82-24575

INFRARED INSTRUMENTS

Infrared sensing of sea surface temperature from space p 53 A82-32902

INFRARED PHOTOGRAPHY

Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981 p 5 A82-29526

Thermography - A remote sensing method with many perspectives p 76 A82-29922
Geostationary satellite observations of the April 1979 Soufriere eruptions p 24 A82-33654
Mapping of wildlife habitat in Farmington Bay, Utah [E82-10354] p 19 N82-26752

INFRARED RADAR
Study visit to United States laser technology centers, 1981 [FOA-C-30257-E1] p 81 N82-24489

INFRARED RADIATION
Interannual variations of outgoing IR associated with tropical circulation changes during 1974-1978 p 54 A82-36341
Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets [E82-10350] p 39 N82-26748

INFRARED RADIOMETERS
High spectral resolution airborne spectrometry p 77 A82-32443
Evaluation of the accuracy of water-surface temperature measurement by means of airborne infrared radiometers p 62 A82-35136
OSTA-1 Post Mission Operation Report [NASA-TM-84191] p 84 N82-23258

INFRARED SCANNERS
Remote sensing of tornadic storms from geosynchronous satellite infrared digital data p 23 A82-32348
Longwave infrared observation of urban landscapes p 25 A82-34744
LANDSAT-D conical scanner evaluation plan [E82-10340] p 81 N82-25602

INFRARED SPECTRA
Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton [E82-10220] p 13 N82-23593
Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas [E82-10363] p 20 N82-26761

INFRARED SPECTROMETERS
Total ozone retrieval from satellite Meteor 28 Fourier spectrometer measurements p 28 A82-36422

INFRARED SPECTROSCOPY
Application of infrared techniques to the study of atmospheric ozone p 27 A82-36414

INSOLATION
Ground support data from July 10 to July 29, 1978, for HCMM thermal satellite data of the Powder River Basin, Wyoming [E82-10211] p 72 N82-23584

INSTRUMENT ERRORS
Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314
Irradiance measurement errors due to the assumption of a Lambertian reference panel p 79 A82-34222
The effect of the spectral attenuation of UV radiation by aerosol on the total ozone measurements p 27 A82-36406
Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

INSTRUMENT PACKAGES
LANDSAT-D thermal analysis and design support [E82-10346] p 82 N82-26744

INSTRUMENTS
Investigations of point transfer p 78 A82-33296

INTEGRATED CIRCUITS
Image understanding research [AD-A110746] p 74 N82-25611

INTERCOSMOS SATELLITES
Purpose, background of 'Intercosmos-21' mission p 81 N82-24264

INTERGALACTIC MEDIA
Extragalactic cosmic rays, their sources and spectrum p 40 A82-22574
Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism p 64 A82-22575

INTERPLANETARY MAGNETIC FIELDS
A description of relativistic solar particle propagation p 4 A82-22600
Low-energy particles in interplanetary magnetic field near the sectorial boundary on September 26, 1977 p 4 A82-22602
The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics p 83 A82-22603

INTERPLANETARY MEDIUM
Time and energy dependence of heavy ion abundances in solar flare energetic particle events p 22 A82-22605

INTERPLANETARY SPACE
Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584
Observations of interplanetary energetic charged particles from gamma-ray line solar flares p 65 A82-22586
Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594
Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598
On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599
Non-flare injection of protons into interplanetary space p 4 A82-22601

INTERSTELLAR MAGNETIC FIELDS
Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550

INTERSTELLAR MATTER
Confinement and acceleration of cosmic rays in galactic superbubbles p 82 A82-22547
Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552
Interstellar grains as seeds for galactic cosmic rays p 2 A82-22561
On the stellar origin of low energy cosmic rays p 21 A82-22567

INTERSTELLAR RADIATION
The question of short pathlengths in interstellar propagation p 1 A82-22541
The electron and positron spectra in primary cosmic rays p 1 A82-22543

INTERSTELLAR SPACE
On the characteristics of the very low energy galactic cosmic rays in the interstellar space p 63 A82-22540
Remarks on cosmic ray origin p 21 A82-22569
11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616

INVENTORIES
Multi-resource inventory in interior Alaska p 6 A82-29532
A new approach to multiresource inventories using remote sensing and geographic information systems technologies p 25 A82-34739

INVERSE SCATTERING
Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553

ION EMISSION
Coulombian energy losses and the nuclear composition of the solar cosmic rays p 4 A82-22610

ION IMPLANTATION
Is the neon composition of our sun, planetary or solar p 76 A82-22608

ION MOTION
On the stellar origin of low energy cosmic rays p 21 A82-22567

ION PRODUCTION RATES
Evidence for the stochastic acceleration of cosmic rays in supernova remnants p 2 A82-22564

IONIZATION CROSS SECTIONS
Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607

IONIZATION POTENTIALS
On volatility, first ionization potential, and s- and r-processes --- for Galactic cosmic ray sources p 2 A82-22560
A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609

IONOSPHERE
Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

IONOSPHERIC CURRENTS
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10195] p 71 N82-22629
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10226] p 73 N82-23599
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10232] p 73 N82-23605
Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612
Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere [E82-10244] p 36 N82-24522
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10306] p 74 N82-24580
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

IONOSPHERIC DRIFT
Characteristics of field-aligned E-region irregularities over Iioka /36 N/, Japan. I p 26 A82-36268

IONOSPHERIC ELECTRON DENSITY
Generation of the auroral kilometric radiation p 26 A82-35542

IONOSPHERIC SOUNDING
The determination of differential X-ray spectrum of the solar flare using ionospheric data p 65 A82-22582

IOWA
Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588
Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa [E82-10221] p 13 N82-23594

IRON
Fragmentation of Fe nuclei on carbon, hydrogen and CH2 targets. I - Individual charge changing and total cross sections. II - Isotopic cross sections --- for interstellar cosmic ray propagation p 63 A82-22538

IRRADIANCE
Irradiance measurement errors due to the assumption of a Lambertian reference panel p 79 A82-34222

IRRIGATION
Problems associated with remotely detecting and monitoring saline sites within irrigated Alberta p 9 A82-34710
Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming [E82-10356] p 20 N82-26754

ISOTHERMS
Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824

ISOTOPE EFFECT
Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota [DE82-005540] p 48 N82-27814

ISOTOPES
Nucleosynthesis of light and by-passed isotopes in the solar system matter p 64 A82-22578
High resolution measurements of solar flare isotopes p 22 A82-22606

ISOTOPIC ENRICHMENT
The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555
The model of the cosmic ray enrichment by helium-3 p 31 A82-22614

ISOTOPIC LABELING
Feasibility of laser-separation of 36 S and its use as an atmospheric tracer [DE82-000965] p 30 N82-27737

ITALY
Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44) [E82-10096] p 35 N82-23563

J

JAPAN
Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612
Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere [E82-10244] p 36 N82-24522
Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

K

KALIHARI BASIN (AFRICA)
Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana [OGMR-56] p 42 N82-22636

KANSAS
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge [E82-10217] p 13 N82-23590

Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas
[E82-10351] p 19 N82-26749

KENTUCKY
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee
p 34 A82-34918

KILOMETRIC WAVES
Generation of the auroral kilometric radiation
p 26 A82-35542

KINETIC EQUATIONS
Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

L

LAKE ICE
Use of NOAA/AVHRR visible and near-infrared data for land remote sensing
[NASA-TM-84166] p 81 N82-22643

LAKE MICHIGAN
Comparison of ozone in polluted and clean air masses over Lake Michigan p 29 A82-36477

LAMBERT SURFACE
Irradiance measurement errors due to the assumption of a Lambertian reference panel p 79 A82-34222

LAND MANAGEMENT
Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441
Problems associated with remotely detecting and monitoring saline sites within irrigated Alberta
p 9 A82-34710
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597
Identifying environmental features for land management decisions --- Utah
[E82-10289] p 30 N82-24567

LAND USE
Detecting residential land-use development at the urban fringe p 22 A82-29332
Preliminary evidence for the influence of physiography and scale upon the autocorrelation function of remotely sensed data p 67 A82-32343
Sample design for estimating change in land use and land cover p 24 A82-32711
Site selection and engineering issues for a major industrial complex - Application of image and map interpretation p 25 A82-34711
Use of aerial photography in determining land use and streamflow relationships on small developing watersheds
p 60 A82-34736
Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743
Aerial photography vs. Landsat for digital land-cover mapping in an urban watershed p 61 A82-34745
Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746
Spatial resolution requirements for urban studies
p 29 A82-37502
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 29 N82-23043
AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment
[E82-10216] p 13 N82-23589
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597
An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563
Application of remote sensing to state and regional problems
[E82-10288] p 30 N82-24566
A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri
[E82-10311] p 17 N82-24585
Forest Resource Information System. Phase 3: System transfer report
[E82-10344] p 18 N82-25606
Inventory of wetlands and agricultural land cover in the upper Sevier River Basin, Utah
[E82-10345] p 18 N82-25607
Exploration into technical procedures for vertical integration --- information systems
[NASA-CR-166352] p 75 N82-26763

LANDSAT D
Landsat D to yield more precise data
p 70 A82-37200
LANDSAT-D conical scanner evaluation plan
[E82-10340] p 81 N82-25602
LANDSAT D to test thematic mapper, inaugurate operational system
[NASA-NEWS-RELEASE-82-100] p 82 N82-26741
LANDSAT-D thermal analysis and design support
[E82-10346] p 82 N82-26744

LANDSAT SATELLITES
Development of three-dimensional spatial displays using a geographically based information system
p 66 A82-29326
The use of residual images in Landsat image analysis
p 66 A82-29328
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem
p 7 A82-29747
Relating Landsat digital count values to ground reflectance for optically thin atmospheric conditions
p 66 A82-29762
Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304
Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/
p 41 A82-30305
Detection of volcanic smoke and ash-fall area at volcano Aso, from Landsat MSS data p 23 A82-31295
Evaluation of temporal registration of Landsat scenes
p 67 A82-32345
Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441
Digitally enhanced visual displays facilitate the analysis of Landsat imagery p 67 A82-32507
Computation with physical values from Landsat digital data p 68 A82-32709
Monitoring land-cover change by principal component analysis of multitemporal Landsat data
p 68 A82-32906
The response characteristics of vegetation in Landsat MSS digital data p 8 A82-32907
Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912
Coastal environment change analysis by Landsat MSS data p 54 A82-34219
An information-theoric spatial transform
p 69 A82-34717
Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730
Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731
Automated classification of runoff coefficients from Landsat multispectral data p 60 A82-34734
A new approach to multiresource inventories using remote sensing and geographic information systems technologies p 25 A82-34739
Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743
Aerial photography vs. Landsat for digital land-cover mapping in an urban watershed p 61 A82-34745
Space science for applications - The history of Landsat p 84 A82-36617
Remote sensing in Scotland using data received from satellites - A study of the Tay Estuary region using Landsat multispectral scanning imagery p 62 A82-37501
Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands
p 10 A82-37503
Use of LANDSAT data to define soil boundaries in Carroll County, Missouri p 10 N82-23116
A legislator's guide to LANDSAT
[E82-10290] p 85 N82-24568
Exploration into technical procedures for vertical integration --- information systems
[NASA-CR-166352] p 75 N82-26763
Experimental assessment of improved spatial resolution LANDSAT data
[AD-A110538] p 75 N82-26765

LANDSAT 3
The use of Landsat-3 thermal data to help differentiate land covers p 25 A82-34218

LARGE AREA CROP INVENTORY EXPERIMENT
Field size, length, and width distributions based on LACIE ground truth data --- large area crop inventory experiment p 8 A82-32909

LARGE SPACE TELESCOPE
Radiometer mission requirements for large space antenna systems
[NASA-TM-84478] p 81 N82-25610

LASER APPLICATIONS
Laser-induced bioluminescence --- for remote sensing of marine organisms p 53 A82-32559
Bias correction procedures for airborne laser hydrography
[PB82-130089] p 83 N82-22644
Study visit to United States laser technology centers, 1981
[FOA-C-30257-E1] p 81 N82-24489
Feasibility of laser-separation of 36 S and its use as an atmospheric tracer
[DE82-000965] p 30 N82-27737

LASER RANGE FINDERS
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293

LASER SPECTROMETERS
In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program
[NASA-TM-84471] p 30 N82-25661

LEASING
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 29 N82-23043

LEAVES
Remote sensing of leaf water content in the near infrared p 8 A82-32897
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623

LENSES
An optical objective lens for earth observations by satellites p 78 A82-32824

LESSER ANTILLES
Soufriere Volcano, St. Vincent - Observations of its 1979 eruption from the ground, aircraft, and satellites
p 24 A82-33652

LIGNITE
Application of remote sensing to state and regional problems
[E82-10288] p 30 N82-24566

LINEAR POLARIZATION
Linear polarization of light by two wheat canopies measured at many view angles
[E82-10229] p 14 N82-23602

LITHOLOGY
Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study
[E82-10190] p 42 N82-22624
Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44)
[E82-10096] p 35 N82-23563

LITHOSPHERE
A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795

LOCUSTS
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem
p 7 A82-29747

LONG RANGE WEATHER FORECASTING
On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909

LUNAR RANGEFINDING
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293

LUNAR SOIL
Is the neon composition of our sun, planetary or solar
p 76 A82-22608

M

MAGNESIUM ISOTOPES
Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554

MAGNETIC ANOMALIES
Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314
Initial scalar magnetic anomaly map from Magsat
p 32 A82-30784
Initial vector magnetic anomaly map from Magsat
p 32 A82-30785
Magsat scalar anomaly distribution - The global perspective p 41 A82-30786
Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787
Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788
Verification of the crustal component in satellite magnetic data p 32 A82-30789
A preliminary comparison of the Magsat data and aeromagnetic data in the continental U.S.
p 32 A82-30790
A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795

Preliminary interpretation of magnetic anomalies over Japan and its surrounding area p 33 A82-30796
Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee p 34 A82-34918
Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824
Structure, composition and thermal state of the crust in Brazil --- geomagnetic survey
[E82-10187] p 35 N82-22621
Study of gravity and magnetic anomalies using MAGSAT data
[E82-10194] p 35 N82-22628
Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44)
[E82-10096] p 35 N82-23563
Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569
Analyses of MAGSAT tracks crossing the study region in the Indian Ocean
[E82-10197] p 71 N82-23570
MAGSAT science investigations
[E82-10199] p 71 N82-23572
MAGSAT for geomagnetic studies over Indian region
[E82-10202] p 72 N82-23575
Bathymetric and tectonics of Indian Ocean using MAGSAT data
[E82-10204] p 36 N82-23577
Investigation from Japanese MAGSAT team
[E82-10239] p 73 N82-23612
Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT
[E82-10240] p 73 N82-23613
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1
[DE82-001031] p 43 N82-23621
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1
[DE82-004152] p 45 N82-23641
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2
[DE82-004164] p 45 N82-23642
Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration
[E82-10242] p 36 N82-24520
Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere
[E82-10244] p 36 N82-24522
Report of MAGSAT project by Survey of India
[E82-10293] p 73 N82-24570
MAGSAT for geomagnetic studies over Indian region
[E82-10296] p 73 N82-24572
An equivalent layer magnetization model for the United States derived from MAGSAT data
[E82-10297] p 36 N82-24573
Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data
[E82-10303] p 36 N82-24577
Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data
[E82-10304] p 37 N82-24578
The mineralogy of global magnetic anomalies --- rock magnetic signatures and MAGSAT geological, and gravity correlations in West Africa
[E82-10305] p 45 N82-24579
MAGSAT scalar and vector anomaly data analysis
[E82-10307] p 74 N82-24581
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10308] p 37 N82-24582
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10309] p 37 N82-24583
Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586
Improved definition of crustal magnetic anomalies for MAGSAT data
[E82-10314] p 37 N82-24587
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10316] p 38 N82-24589
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10317] p 38 N82-24590
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10318] p 38 N82-24591
Geotectonics of South America --- regional magnetic and gravity anomalies of South America
[E82-10320] p 38 N82-24593
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10321] p 46 N82-24594
Report of investigation from Japanese MAGSAT Team
[E82-10322] p 74 N82-24595
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10323] p 46 N82-24596
Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes, part 2
[E82-10325] p 30 N82-24598
MAGSAT anomaly map and continental drift
[E82-10326] p 38 N82-24599
Models and maps of the main field
[E82-10327] p 74 N82-24600
Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT data
[E82-10330] p 38 N82-24603
Aeromagnetic and satellite magnetic anomally mapping
[E82-10339] p 39 N82-25601
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 46 N82-25621
Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

MAGNETIC DISTURBANCES
Studies of high latitude current systems using MAGSAT vector data
[E82-10188] p 71 N82-22622

MAGNETIC EFFECTS
Features of cosmic ray variations due to variations in the total magnetic field of the sun p 49 A82-22619

MAGNETIC FIELDS
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10306] p 74 N82-24580

MAGNETIC FLUX
Investigation of geomagnetic field forecasting and fluid dynamics of the core --- determination of the bundary between the core and mantle of the Earth
[E82-10198] p 35 N82-23571
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10310] p 37 N82-24584

MAGNETIC MEASUREMENT
Airborne gamma-ray spectrometer and magnetometer survey: Susanville quadrangle, California, volume 1
[DE82-005538] p 48 N82-27811
Airborne gamma-ray spectrometer and magnetometer survey: Roseburg quadrangle, Oregon, volume 2
[DE82-005568] p 48 N82-27812

MAGNETIC MONOPOLES
Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579

MAGNETIC POLES
A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations
[AD-A110765] p 39 N82-26268

MAGNETIC SIGNATURES
Observed magnetic substorm signatures at synchronous altitude p 26 A82-35534
Investigation of MAGSAT and TRIAD magnetometer data to provide corrective information on high-latitude external fields
[E82-10201] p 72 N82-23574

MAGNETIC STORMS
Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes
[E82-10359] p 30 N82-26757

MAGNETIC SURVEYS
Magnetic charts of Canada derived from Magsat data p 32 A82-30778
Verification of the crustal component in satellite magnetic data p 32 A82-30789
Structure, composition and thermal state of the crust in Brazil --- geomagnetic survey
[E82-10187] p 35 N82-22621
MAGSAT and aeromagnetic data in the North American continent
[E82-10193] p 71 N82-22627
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10195] p 71 N82-22629
Equivalent source modeling of the main field using MAGSAT data
[E82-10151] p 71 N82-23567
MAGSAT for geomagnetic studies over Indian region
[E82-10202] p 72 N82-23575
Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10226] p 73 N82-23599
Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10232] p 73 N82-23605
Investigation from Japanese MAGSAT team
[E82-10239] p 73 N82-23612
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1
[DE82-001031] p 43 N82-23621
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1
[DE82-000334] p 43 N82-23623
Airborne gamma-ray spectrometer and magnetometer survey. Wainwright quadrangle, Alaska, volume 2
[DE82-000341] p 43 N82-23624
Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2
[DE82-000340] p 43 N82-23626
Airborne gamma-ray spectrometer and magnetometer survey. Teshekpuk quadrangle, Alaska, volume 2
[DE82-000310] p 43 N82-23627
Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2
[DE82-000315] p 43 N82-23628
Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2
[DE82-000309] p 43 N82-23629
Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2
[DE82-000308] p 43 N82-23630
Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2
[DE82-000316] p 44 N82-23631
Airborne gamma-ray spectrometer and magnetometer survey. Sagavanirktok quadrangle, Alaska, volume 2
[DE82-000311] p 44 N82-23632
Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2
[DE82-001027] p 44 N82-23633
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 44 N82-23635
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 44 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1
[DE82-004151] p 45 N82-23643
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2
[DE82-004166] p 45 N82-23644
Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere
[E82-10244] p 36 N82-24522
MAGSAT for geomagnetic studies over Indian region
[E82-10296] p 73 N82-24572
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10310] p 37 N82-24584
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10323] p 46 N82-24596
Investigation of geomagnetic field forecasting and fluid dynamics of the core
[E82-10342] p 39 N82-25604
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 46 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 46 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 46 N82-25622
Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2
[DE82-000313] p 47 N82-25625

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1 [DE82-005542] p 47 N82-27804

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2 [DE82-005570] p 47 N82-27805

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1 [DE82-005554] p 47 N82-27808

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas [DE82-005560] p 48 N82-27809

NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle [DE82-005527] p 48 N82-27810

Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1 --- uranium exploration [DE82-005541] p 48 N82-27813

Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota [DE82-005540] p 48 N82-27814

Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California [DE82-005543] p 48 N82-27815

MAGNETIC VARIATIONS

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes, part 2 [E82-10325] p 30 N82-24598

Comparison of storm-time changes of geomagnetic field at ground and MAGSAT altitudes [E82-10359] p 30 N82-26757

MAGNETIZATION

Satellite and surface geophysical expression of anomalous crustal structure in Kentucky and Tennessee p 34 A82-34918

MAGNETOHYDRODYNAMIC WAVES

The galactic origin of cosmic rays. I [CONF-810711-1] p 2 A82-22565

Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona p 3 A82-22589

MAGNETOMETERS

Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranagle, Alaska, volume 2 [DE82-000342] p 46 N82-25623

MAGNETOSPHERE

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10232] p 73 N82-23605

Investigation from Japanese MAGSAT team [E82-10239] p 73 N82-23612

Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere [E82-10244] p 36 N82-24522

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques [E82-10306] p 74 N82-24580

Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

MAGSAT SATELLITES

Initial scalar magnetic anomaly map from Magsat p 32 A82-30784

Initial vector magnetic anomaly map from Magsat p 32 A82-30785

Magsat scalar anomaly distribution - The global perspective p 41 A82-30786

Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787

Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788

Verification of the crustal component in satellite magnetic data p 32 A82-30789

A preliminary comparison of the Magsat data and aeromagnetic data in the continental U.S. p 32 A82-30790

A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795

Preliminary interpretation of magnetic anomalies over Japan and its surrounding area p 33 A82-30796

MANAGEMENT INFORMATION SYSTEMS

AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test [E82-10224] p 14 N82-23597

MANNED SPACECRAFT

Remote sensing of the earth's resources - The Soviet experience p 84 A82-33555

MAP MATCHING GUIDANCE

Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314

MAPPING

Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306

American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers p 79 A82-34701

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

Study of gravity and magnetic anomalies using MAGSAT data [E82-10194] p 35 N82-22628

Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1 [DE82-001031] p 43 N82-23621

Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2 [DE82-001025] p 44 N82-23634

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 44 N82-23638

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1 [DE82-004159] p 44 N82-23639

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2 [DE82-004165] p 45 N82-23640

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1 [DE82-004152] p 45 N82-23641

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2 [DE82-004164] p 45 N82-23642

Report of MAGSAT project by Survey of India [E82-10293] p 73 N82-24570

Magnetic and gravity anomalies in the Americas [E82-10312] p 37 N82-24586

Image understanding research [AD-A110746] p 74 N82-25611

Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

Source assessment system [AD-A111223] p 75 N82-25613

Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California [DE82-005543] p 48 N82-27815

MAPS

The crustal structure and tectonics of South America [E82-10319] p 38 N82-24592

Report of investigation from Japanese MAGSAT Team [E82-10322] p 74 N82-24595

MAGSAT anomaly map and continental drift [E82-10326] p 38 N82-24599

Models and maps of the main field [E82-10327] p 74 N82-24600

Computer-processed geophysical atlas of digital data for the East Coast margin of the United States from surface and spacecraft data [AD-A111388] p 39 N82-25748

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas [DE82-005560] p 48 N82-27809

MARINE BIOLOGY

Laser-induced bioluminescence --- for remote sensing of marine organisms p 53 A82-32559

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 58 N82-26944

MARINE ENVIRONMENTS

A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean [E82-10360] p 58 N82-26758

MARINE METEOROLOGY

Retrieval of ocean surface and atmospheric parameters from multichannel microwave radiometric measurements p 53 A82-31995

Estimation of the temperature of the upper boundary of cloud cover over the world ocean p 54 A82-36005

Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196

Marine boundary layer wind structure over the Bay of Bengal during Monex-79 --- Monsoon Experiment (MONEX) p 57 N82-23929

MARINE RESOURCES

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 58 N82-26944

MARINE TECHNOLOGY

The processing of satellite navigation data for marine geodesy p 34 A82-37175

Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 58 N82-26944

MARINER 10 SPACE PROBE

A color-ratio map of Mercury p 31 A82-22294

MARSHLANDS

Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands p 10 A82-37503

MASS RATIOS

Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557

MASSIFS

Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study [E82-10190] p 42 N82-22624

MATCHING

An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data [E82-10286] p 16 N82-24564

MATHEMATICAL MODELS

A comparison of helium and heavy ion spectra in He/3/ rich solar flares with a model calculation p 5 A82-22612

Gravity model improvement for Seasat p 32 A82-29615

A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910

Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824

A meteorologically driven maize stress indicator model [E82-10112] p 11 N82-23564

Topographic slope correction for analysis of thermal infrared images [E82-10214] p 36 N82-23587

Report of MAGSAT project by Survey of India [E82-10293] p 73 N82-24570

An equivalent layer magnetization model for the United States derived from MAGSAT data [E82-10297] p 36 N82-24573

MATRICES (MATHEMATICS)

Matrix data analysis: Color/B and W coding is not always enough [AD-A111401] p 74 N82-25612

MAXIMUM ENTROPY METHOD

Information theory lateral density distribution for earth inferred from global gravity field p 35 A82-37962

MAXIMUM LIKELIHOOD ESTIMATES

The use of prior probabilities in maximum likelihood classification of remotely sensed data p 68 A82-32904

MEAN FREE PATH

Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598

MEASUREMENT

Movement of ice markers measured by satellite ranging [R-240] p 59 N82-27816

MEDITERRANEAN SEA

Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44) [E82-10096] p 35 N82-23563

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain [E82-10300] p 17 N82-24576

MELTING

The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period p 61 A82-35132

Method for the analysis of the melting of a firn complex on the basis of aerospace photographs p 61 A82-35133

Experience with the compilation of maps of snow-cover melting in the central part of the European USSR on the basis of satellite data p 62 A82-35134

MELTS (CRYSTAL GROWTH)

Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites p 42 A82-36298

MERCURY (PLANET)

A color-ratio map of Mercury p 31 A82-22294

MESON-MESON INTERACTIONS
Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579
MESOSCALE PHENOMENA
High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979
[E82-10324] p 57 N82-24597
MESOSPHERE
Observation of the diurnal variation of atmospheric ozone p 26 A82-35895
Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415
OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472
METEORITIC COMPOSITION
Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577
METEOROLOGICAL CHARTS
Meteorological and aircraft data for CUE 2 1973
[PB82-149246] p 59 N82-26949
METEOROLOGICAL PARAMETERS
Retrieval of ocean surface and atmospheric parameters from multichannel microwave radiometric measurements p 53 A82-31995
Meteorological analysis of the eruption of Soufriere in April 1979 p 24 A82-33655
The meteorological product - 'Cloud-top height' p 70 A82-36043
Ground support data from July 10 to July 29, 1978, for HCMM thermal satellite data of the Powder River Basin, Wyoming
[E82-10211] p 72 N82-23584
A meteorologically driven grain sorghum stress indicator model
[E82-10218] p 13 N82-23591
METEOROLOGICAL SATELLITES
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting p 61 A82-35131
Estimation of the temperature of the upper boundary of cloud cover over the world ocean p 54 A82-36005
METEOROLOGY
The METEOSAT Data Collection System and its application p 75 N82-26037
METEOSAT SATELLITE
The meteorological product - 'Cloud-top height' p 70 A82-36043
MEXICO
Monitoring deforestation in the eastern part of the state of Guerrero, Mexico p 9 A82-34733
MICROCOMPUTERS
Image processing with microcomputers in remote sensing p 79 A82-34708
MICRODENSITOMETERS
Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539
MICROWAVE EMISSION
A multi-frequency radiometric measurement of soil moisture content over bare and vegetated fields
[E82-10238] p 16 N82-23611
MICROWAVE EQUIPMENT
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
MICROWAVE IMAGERY
Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements p 49 A82-28907
MICROWAVE RADIOMETERS
Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
Description of Seasat radiometer status and results p 52 A82-29622
Retrieval of ocean surface and atmospheric parameters from multichannel microwave radiometric measurements p 53 A82-31995
Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658
A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910
Snowpack monitoring in North America and Eurasia using passive microwave satellite data p 78 A82-32915
The use of microwave radiometry for the determination of snow cover height p 80 A82-36018
Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415
Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605
Radiometer mission requirements for large space antenna systems
[NASA-TM-84478] p 81 N82-25610
MICROWAVE SCATTERING
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
On the synthetic aperture radar imaging of ocean surface waves p 53 A82-32881
Characteristics of 13.9 GHz radar scattering from oil films on the sea surface p 54 A82-33438
MICROWAVE SENSORS
Seasat measurement system evaluation - Achievements and limitations p 49 A82-29601
Microwave sensing from space
[AAS PAPER 82-127] p 80 A82-37809
Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605
Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas
[E82-10362] p 20 N82-26760
The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762
MICROWAVE SPECTRA
Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas
[E82-10363] p 20 N82-26761
MICROWAVES
The possibility of using remote-sensing methods to study the hydrology of elementary watersheds p 61 A82-35130
The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169083] p 57 N82-26525
MIDLATITUDE ATMOSPHERE
Characteristics of field-aligned E-region irregularities over Iioka /36 N/, Japan. I p 26 A82-36268
MILKY WAY GALAXY
Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey p 82 A82-22549
Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550
Convective outflow of cosmic rays from the Galaxy and background radio emission p 83 A82-22551
MINERAL DEPOSITS
Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana
[OGMR-56] p 42 N82-22636
Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 29 N82-23043
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1
[DE82-001031] p 43 N82-23621
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1
[DE82-000334] p 43 N82-23623
Airborne gamma-ray spectrometer and magnetometer survey. Wainwright quadrangle, Alaska, volume 2
[DE82-000341] p 43 N82-23624
Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1
[DE82-001029] p 43 N82-23625
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1
[DE82-004152] p 45 N82-23641
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2
[DE82-004164] p 45 N82-23642
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10321] p 46 N82-24594
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 46 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 46 N82-25622
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 47 N82-27808
NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle
[DE82-005527] p 48 N82-27810
MINERAL EXPLORATION
Aerogeophysical methods of finding uranium deposits --- Russian book p 41 A82-33402
Landsat in the search for Appalachian hydrocarbons p 42 A82-34721
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1
[DE82-000334] p 43 N82-23623
Airborne gamma-ray spectrometer and magnetometer survey. Wainwright quadrangle, Alaska, volume 2
[DE82-000341] p 43 N82-23624
Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2
[DE82-000340] p 43 N82-23626
Airborne gamma-ray spectrometer and magnetometer survey. Teshekpuk quadrangle, Alaska, volume 2
[DE82-000310] p 43 N82-23627
Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2
[DE82-000315] p 43 N82-23628
Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2
[DE82-000309] p 43 N82-23629
Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2
[DE82-000308] p 43 N82-23630
Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2
[DE82-000316] p 44 N82-23631
Airborne gamma-ray spectrometer and magnetometer survey. Sagavanirktok quadrangle, Alaska, volume 2
[DE82-000311] p 44 N82-23632
Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2
[DE82-001027] p 44 N82-23633
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1
[DE82-004151] p 45 N82-23643
Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2
[DE82-004166] p 45 N82-23644
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10153] p 45 N82-24518
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10243] p 45 N82-24521
Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent
[E82-10323] p 46 N82-24596
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 46 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranagle, Alaska, volume 2
[DE82-000342] p 46 N82-25623
Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2
[DE82-000313] p 47 N82-25625
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 47 N82-27805
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1
[DE82-005533] p 47 N82-27806
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 2
[DE82-005574] p 47 N82-27807
Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1 --- uranium exploration
[DE82-005541] p 48 N82-27813
MINERALOGY
Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites p 42 A82-36298
The mineralogy of global magnetic anomalies --- rock magnetic signatures and MAGSAT geological, and gravity correlations in West Africa
[E82-10305] p 45 N82-24579
MINICOMPUTERS
Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10313] p 82 N82-26743

MINNESOTA

AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581

Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2
[DE82-001027] p 44 N82-23633

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 44 N82-23638

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1
[DE82-004151] p 45 N82-23643

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2
[DE82-004166] p 45 N82-23644

MISSISSIPPI

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

Application of remote sensing to state and regional problems
[E82-10288] p 30 N82-24566

MISSOURI

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains
[E82-10205] p 11 N82-23578

Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

MODELS

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10226] p 73 N82-23599

MODULATION TRANSFER FUNCTION

11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616

MOISTURE CONTENT

Remote sensing of leaf water content in the near infrared p 8 A82-32897

Effect of atmospheric conditions on remote sensing of vegetation parameters p 24 A82-32901

Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590

Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco
[E82-10347] p 19 N82-26745

MOLECULAR CLOUDS

Interactions of cosmic rays with molecular clouds
p 82 A82-22548

MONOMOLECULAR FILMS

Depression of brightness temperature of sea surfaces covered with monomolecular oil films relative to clean water surfaces at 1.43 GHz p 54 A82-33322

MONSOONS

The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

Representativeness of cloud motion winds deduced from GOES Indian Ocean satellite imagery for the description of the indian summer monsoon --- superpressure balloons for the study of the Indian summer monsoon (BALSAMINE) p 55 N82-23879

Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891

Short term influence radius of monsoonal overturnings --- First Global Atmospheric Research Program Global Experiment (FGGE) p 56 N82-23898

Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX)
p 56 N82-23900

MONEX oceanographic observations along the East African coast --- global atmospheric research program
p 56 N82-23908

Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

The onset of the Australian Northwest monsoon during winter MONEX: Broadscale flow revealed by an objective analysis scheme p 56 N82-23912

Marine boundary layer wind structure over the Bay of Bengal during Monex-79 --- Monsoon Experiment (MONEX) p 57 N82-23929

Estimates of the statistical structure of the atmospheric pressure field in summer Monex-79 area
p 57 N82-23939

Analysis of ocean and atmosphere thermodynamical characteristics during the onset of southwest monsoon over the Arabian Sea p 57 N82-23945

MONTANA

AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581

The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana
[E82-10341] p 46 N82-25603

MONTE CARLO METHOD

Calculation of production rates of cosmogenic nuclides by Monte Carlo method p 64 A82-22576

A description of relativistic solar particle propagation
p 4 A82-22600

MOROCCO

Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco
[E82-10315] p 74 N82-24588

MOUNTAINS

Method for the analysis of the melting of a firn complex on the basis of aerospace photographs
p 61 A82-35133

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573

Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

MULTISPECTRAL BAND SCANNERS

Detecting residential land-use development at the urban fringe p 22 A82-29332

Detection of volcanic smoke and ash-fall area at volcano Aso, from Landsat MSS data p 23 A82-31295

A system design for a multispectral sensor using two-dimensional solid-state imaging arrays
p 77 A82-31991

Spectroscopic remote sensing for geological applications p 41 A82-32442

Thematic mapper - An overview of spectral band registration p 77 A82-32447

Multispectral mapper - Imaging spectroscopy as applied to the mapping of earth resources p 77 A82-32448

The use of prior probabilities in maximum likelihood classification of remotely sensed data
p 68 A82-32904

Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912

EPA's new bubble and banking policies --- for environmental monitoring p 25 A82-33865

The use of Landsat-3 thermal data to help differentiate land covers p 25 A82-34218

Coastal environment change analysis by Landsat MSS data p 54 A82-34219

Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

Remote sensing in Scotland using data received from satellites - A study of the Tay Estuary region using Landsat multispectral scanning imagery p 62 A82-37501

Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands
p 10 A82-37503

Solid state instrumentation concepts for earth resource observation
[AAS PAPER 82-132] p 81 A82-37812

OSTA-1 Post Mission Operation Report
[NASA-TM-84191] p 84 N82-23258

LANDSAT D to test thematic mapper, inaugurate operational system
[NASA-NEWS-RELEASE-82-100] p 82 N82-26741

MULTISPECTRAL LINEAR ARRAYS

Advanced technology for earth observation - Data processing
[AAS PAPER 82-130] p 71 A82-37810

MULTISPECTRAL PHOTOGRAPHY

Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440

Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441

Landsat detection of hardwood forest clearcuts
p 8 A82-32708

An information-theoric spatial transform
p 69 A82-34717

Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images
p 70 A82-35141

Landsat D to yield more precise data
p 70 A82-37200

A quantitative multispectral analysis system for aerial photographs applied to coastal planning
p 55 A82-37505

Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri.
[E82-10186] p 84 N82-22620

An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563

N

NAUTICAL CHARTS

A search for seamounts in the southern Cook and Austral region p 52 A82-30810

NAVIGATION

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576

NAVIGATION INSTRUMENTS

Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314

NAVIGATION SATELLITES

The processing of satellite navigation data for marine geodesy p 34 A82-37175

NEARSHORE WATER

Nearshore current pattern off south Texas - An interpretation from aerial photographs
p 53 A82-32903

NEON ISOTOPES

Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554

Comparative abundances in solar energetic particles and in galactic cosmic ray sources, and the Ne-22 anomaly
p 83 A82-22556

On the stellar origin of the Ne-22 excess in cosmic rays p 21 A82-22562

Origin of galactic cosmic rays from Ne isotopic composition p 2 A82-22563

Is the neon composition of our sun, planetary or solar
p 76 A82-22608

NEUTRAL SHEETS

Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona
p 3 A82-22589

NEUTRON FLUX DENSITY

The approximate 1 GeV solar cosmic rays in the Forbush-effect of February 15, 1978 p 40 A82-22604

Primary spectral variations of cosmic rays above 1 GV
p 5 A82-22618

NEUTRON SPECTRA

Primary spectral variations of cosmic rays above 1 GV
p 5 A82-22618

NEUTRON SPECTROMETERS

Primary spectral variations of cosmic rays above 1 GV
p 5 A82-22618

NEUTRON STARS

Acceleration of cosmic rays in accretion shocks
p 64 A82-22568

Pulsar models and cosmic-ray acceleration
p 21 A82-22570

NEW MEXICO

NURE aerial gamma-ray and magnetic reconnaissance survey of portions of New Mexico, Arizona and Texas. Volume 2: New Mexico-Carlsbad Quadrangle
[DE82-005527] p 48 N82-27810

NIMBUS SATELLITES

Snowpack monitoring in North America and Eurasia using passive microwave satellite data
p 78 A82-32915

NIMBUS 4 SATELLITE
- Total ozone variations 1970-74 using Backscattered Ultraviolet /BUV/ and ground-based observations p 26 A82-36053

NITROGEN
- Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405

NITROGEN DIOXIDE
- Breadboard gas filter correlation spectrometer for atmospheric measurement of hydrazines and nitrogen dioxide [AD-A110688] p 82 N82-25642

NITROGEN OXIDES
- Aircraft measurements of NO/x/ in the lower troposphere above the coast of Japan p 26 A82-36247
- Ammonia and the NOx budget of the troposphere p 27 A82-36293

NOAA SATELLITES
- Geographic location of individual pixels --- for thermal infrared digital data processing p 68 A82-32900
- Measuring sea surface temperature from satellites - A ground truth approach p 54 A82-32917
- Short term influence radius of monsoonal overturnings --- First Global Atmospheric Research Program Global Experiment (FGGE) p 56 N82-23898

NOAA 6 SATELLITE
- Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer p 8 A82-34179

NONLINEAR SYSTEMS
- Nonlinear theory for elastic beams and rods and its finite element representation [WTHD-143] p 73 N82-24517

NORTH AMERICA
- Study of gravity and magnetic anomalies using MAGSAT data [E82-10194] p 35 N82-22628
- Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent [E82-10321] p 46 N82-24594

NORTH DAKOTA
- AgRISTARS: Supporting research. Spring small grains planting date distribution model [E82-10208] p 12 N82-23581
- Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge [E82-10217] p 13 N82-23590
- Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1 [DE82-004161] p 44 N82-23635
- Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2 [DE82-004168] p 44 N82-23636

NORTH SEA
- The METEOSAT Data Collection System and its application p 75 N82-26037

NUCLEAR FUSION
- Nucleosynthesis of light and by-passed isotopes in the solar system matter p 64 A82-22578

NUCLIDES
- Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554
- Calculation of production rates of cosmogenic nuclides by Monte Carlo method p 64 A82-22576
- Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer --- for Mayo Belwa meteorite study p 64 A82-22577

NUMERICAL ANALYSIS
- Generation of the auroral kilometric radiation p 26 A82-35542

NUTRIENTS
- Color aerial photography detects nutrient status of loblolly pine plantations p 6 A82-29531

O

O STARS
- On the stellar origin of low energy cosmic rays p 21 A82-22567

OCCULTATION
- OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472

OCEAN BOTTOM
- Geoid height-age relation from Seasat altimeter profiles across the Mendocino Fracture Zone p 34 A82-32646

OCEAN COLOR SCANNER
- Analysis of ocean color scanner data from the Superflux III Experiment [NASA-TM-83290] p 55 N82-23614

OCEAN CURRENTS
- Seasat altimeter determination of ocean current variability p 50 A82-29613
- A ship and satellite view of hydrographic features in the western Gulf of Mexico p 53 A82-32651
- Determination of winter temperature patterns, fronts, and surface currents in the Yellow Sea and East China Sea from satellite imagery p 55 A82-37195
- Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska [AD-A110806] p 58 N82-26764

OCEAN DATA ACQUISITIONS SYSTEMS
- Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 58 N82-26944

OCEAN DYNAMICS
- Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910
- Satellite observations in FRONTS 80 [AD-A111080] p 58 N82-26766

OCEAN MODELS
- An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607
- The Seasat altimeter mean sea surface model p 51 A82-29614

OCEAN SURFACE
- Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements p 49 A82-28907
- The Seasat altimeter data and its accuracy assessment p 49 A82-29602
- Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
- Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
- An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607
- Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608
- Seasat altimeter timing bias estimation p 50 A82-29609

OPTIMIZATION
- Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588

OREGON

An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon
[E82-10352] p 47 N82-26750

Meteorological and aircraft data for CUE 2 1973
[PB82-149246] p 59 N82-26949

Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California
[DE82-005543] p 48 N82-27815

OROGRAPHY

On the application of a model of boundary-layer flow over low hills to real terrain p 29 A82-36741

The influence of soil characteristics on regional convection differences above Northern Germany p 10 A82-37569

OSCILLATIONS

Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

OSO-8

OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472

OSTA-1 PAYLOAD

OSTA-1 Post Mission Operation Report
[NASA-TM-84191] p 84 N82-23258

OXYGEN SPECTRA

Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405

OZONE

Total ozone variations 1970-74 using Backscattered Ultraviolet /BUV/ and ground-based observations p 26 A82-36053

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

Application of infrared techniques to the study of atmospheric ozone p 27 A82-36414

Observations and analyses of the total amount of atmospheric ozone in the Beijing region and in the region of Jolmolungma Mountain in Tibet p 28 A82-36444

Comparison of ozone in polluted and clean air masses over Lake Michigan p 29 A82-36477

The seasonal variations of ozone and temperature in the middle and the upper stratosphere p 29 A82-36534

In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program
[NASA-TM-84471] p 30 N82-25661

OZONOMETRY

Observation of the diurnal variation of atmospheric ozone p 26 A82-35895

Sensitivity of Dobson total ozone estimations to wavelength band calibration uncertainties p 27 A82-36405

The effect of the spectral attenuation of UV radiation by aerosol on the total ozone measurements p 27 A82-36406

Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415

Total ozone retrieval from satellite Meteor 28 Fourier spectrometer measurements p 28 A82-36422

Dobson spectrophotometer calibrations, possible errors in ozone absorption coefficients, and errors due to interfering pollutant gases p 28 A82-36431

OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472

P

PACIFIC OCEAN

A search for seamounts in the southern Cook and Austral region p 52 A82-30810

Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT
[E82-10240] p 73 N82-23613

Short term influence radius of monsoonal overturnings --- First Global Atmospheric Research Program Global Experiment (FGGE) p 56 N82-23898

High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979
[E82 10324] p 57 N82-24597

Investigations of medium wavelength magnetic anomalies in the eastern Pacific using MAGSAT data
[E82-10330] p 38 N82-24603

Satellite observations in FRONTS 80
[AD-A111080] p 58 N82-26766

Rapid oceanographic data gathering: Some problems in using remote sensing to determine the horizontal and vertical thermal distributions in the Northeast Pacific Ocean
[AD-A111005] p 58 N82-26945

PAIN

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576

PALEOMAGNETISM

MAGSAT anomaly map and continental drift
[E82-10326] p 38 N82-24599

PANORAMIC CAMERAS

Development and application of panoramic aerial photography in forest pest management p 5 A82-29527

Photogrammetric methods for mapping resource data from high altitude panoramic photography p 77 A82-32702

Estimating mountain pine beetle-killed ponderosa pine over the front range of Colorado with high altitude panoramic photography p 7 A82-32704

Optical bar panoramic photography for planning timber salvage in drought-stressed forests p 7 A82-32705

Technical and economical characteristics of the AFA-TES-10M aerial camera p 79 A82-34470

PANORAMIC SCANNING

Panoramic aerial photography in forest pest management p 7 A82-32701

PARTICLE ACCELERATION

Confinement and acceleration of cosmic rays in galactic superbubbles p 82 A82-22547

Cosmic ray composition from acceleration of thermal matter p 64 A82-22558

Physical state of the birth place of cosmic rays and its implication to the acceleration processes p 2 A82-22559

Evidence for the stochastic acceleration of cosmic rays in supernova remnants p 2 A82-22564

The galactic origin of cosmic rays. I
[CONF-810711-1] p 2 A82-22565

Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

Acceleration of cosmic rays in accretion shocks p 64 A82-22568

Remarks on cosmic ray origin p 21 A82-22569

Pulsar models and cosmic-ray acceleration p 21 A82-22570

Acceleration processes near massive black holes p 3 A82-22572

The galactic origin of cosmic rays. II
[CONF-810711-2] p 64 A82-22573

Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism p 64 A82-22575

Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584

Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587

High-energy solar protons p 22 A82-22588

A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon p 4 A82-22592

Preflare increases in solar cosmic rays relevant to the mode of energy accumulation in the active regions associated with large flares p 31 A82-22595

On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599

Time and energy dependence of heavy ion abundances in solar flare energetic particle events p 22 A82-22605

Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607

Coulombian energy losses and the nuclear composition of the solar cosmic rays p 4 A82-22610

PARTICLE DIFFUSION

The cosmic ray positron spectrum p 1 A82-22542

PARTICLE EMISSION

Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584

Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

PARTICLE ENERGY

On the characteristics of the very low energy galactic cosmic rays in the interstellar space p 63 A82-22540

Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

On the stellar origin of low energy cosmic rays p 21 A82-22567

11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616

PARTICLE FLUX DENSITY

Comparison of the measured antiproton flux with that predicted by the 'leaky box' model p 1 A82-22544

Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593

The modulation characteristics of the 19th and 20th solar activity cycles p 59 A82-22615

Features of cosmic ray variations due to variations in the total magnetic field of the sun p 49 A82-22619

PARTICLE INTERACTIONS

Interactions of cosmic rays with molecular clouds p 82 A82-22548

Cosmic ray composition from acceleration of thermal matter p 64 A82-22558

Calculation of production rates of cosmogenic nuclides by Monte Carlo method p 64 A82-22576

PARTICLE MOTION

A report on the 'cosmic ray propagation problem' p 1 A82-22539

Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598

PARTICLE PRODUCTION

Extragalactic cosmic rays, their sources and spectrum p 40 A82-22574

Calculation of production rates of cosmogenic nuclides by Monte Carlo method p 64 A82-22576

PARTICLE SIZE DISTRIBUTION

Fine particles in the Soufriere eruption plume p 24 A82-33659

The effect of the spectral attenuation of UV radiation by aerosol on the total ozone measurements p 27 A82-36406

PARTICLE SPIN

Magnetic monopole pair and its observation in cosmic rays p 65 A82-22579

PARTICLE TRAJECTORIES

The question of short pathlengths in interstellar propagation p 1 A82-22541

PARTICULATE SAMPLING

Fine particles in the Soufriere eruption plume p 24 A82-33659

PATTERN RECOGNITION

Description of gray level picture using a collection of density contour lines p 66 A82-29409

Separation of diffuse from sharp-edged features in digital imagery p 68 A82-34225

Multistage classification of multispectral Earth observational data: The design approach
[E82-10213] p 72 N82-23586

AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee
[E82-10219] p 13 N82-23592

Analysis of scanner data for crop inventories
[E82-10241] p 16 N82-24519

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576

Image understanding research
[AD-A110746] p 74 N82-25611

Association of spectral development patterns with development stages of corn
[E82-10353] p 19 N82-26751

PATTERN REGISTRATION

Registration of Heat Capacity Mapping Mission day and night images
[E82-10210] p 72 N82-23583

An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563

An algorithm for automating the registration of USDA segment ground data to LANDSAT MSS data
[E82-10286] p 16 N82-24564

Forest Resource Information System. Phase 3: System transfer report
[E82-10344] p 18 N82-25606

Key Issues in the Analysis of Remote Sensing Data: A report on the workshop
[E82-10348] p 85 N82-26746

PENNSYLVANIA

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10313] p 82 N82-26743

PERFORMANCE PREDICTION

Investigations of point transfer p 78 A82-33296

PERFORMANCE TESTS

The simultaneous employment of geodetic measurements for block adjustments using the method of independent models p 34 A82-33295

PERIODIC VARIATIONS

Features of cosmic ray variations due to variations in the total magnetic field of the sun p 49 A82-22619

Principles and methods of the study of the hydrological cycle on the basis of aerospace data p 61 A82-35127

PERTURBATION

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10226] p 73 N82-23599

PETROLOGY

Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites
p 42 A82-36298

PHENOLOGY

A meteorologically driven maize stress indicator model
[E82-10112] p 11 N82-23564

AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment
[E82-10126] p 11 N82-23565

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence
[E82-10207] p 12 N82-23580

AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581

A meteorologically driven grain sorghum stress indicator model
[E82-10218] p 13 N82-23591

PHOTOGEOLOGY

Spectroscopic remote sensing for geological applications p 41 A82-32442

Possible fault detection in Cottonball Basin, California An application of radar remote sensing
p 41 A82-32898

Aerogeophysical methods of finding uranium deposits --- Russian book p 41 A82-33402

Comparing lineaments interpreted from Landsat imagery and topographic maps with reported faults in southwest Montana p 34 A82-34719

Landsat in the search for Appalachian hydrocarbons
p 42 A82-34721

Significance of tectonics in linear feature detection and interpretation on satellite images p 42 A82-37198

Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana
[OGMR-56] p 42 N82 22636

Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco
[E82-10315] p 74 N82-24588

An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon
[E82-10352] p 47 N82-26750

PHOTOGONIOMETERS

Irradiance measurement errors due to the assumption of a Lambertian reference panel p 79 A82-34222

PHOTOGRAMMETRY

Photogrammetric methods for mapping resource data from high altitude panoramic photography
p 77 A82-32702

Geographic location of individual pixels --- for thermal infrared digital data processing p 68 A82-32900

The simultaneous employment of geodetic measurements for block adjustments using the method of independent models p 34 A82-33295

Investigations of point transfer p 78 A82-33296

American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers p 79 A82-34701

A practical study of gross-error detection in bundle adjustment p 69 A82-34702

Present status of on-line analytical triangulation
p 69 A82-34940

Coordination of stereo image registration and pixel classification
[AD-A111307] p 75 N82-25614

PHOTOGRAPHIC FILM

Considerations in using color infrared photographs for vegetative interpretation p 6 A82-29530

An infrared exposure meter p 76 A82-29541

Image quality and height measurement accuracy of serial survey camera imagery from high altitudes
p 78 A82-33297

Sensitometry in Canadian aerial survey
p 79 A82-34724

PHOTOGRAPHIC PROCESSING

Analytical processing of photographs taken by paired cameras p 79 A82-34471

PHOTOGRAPHY

Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/
p 7 A82-29538

PHOTOINTERPRETATION

Detecting residential land-use development at the urban fringe p 22 A82-29332

Development and application of panoramic aerial photography in forest pest management
p 5 A82-29527

Considerations in using color infrared photographs for vegetative interpretation p 6 A82-29530

Multi-resource inventory in interior Alaska
p 6 A82-29532

Estimating rangeland cover proportions with large-scale color-infrared aerial photographs p 6 A82-29534

Detection and damage assessment of citrus tree losses with aerial color infrared photography /ACIR/
p 7 A82-29538

Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539

Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/
p 41 A82-30305

Problems of the interpretation of aerial and satellite images of industrial smoke p 23 A82-30307

Extraction of line shaped objects from aerial images using a special operator to analyze the profiles of functions p 67 A82-32033

Dependent feature trees for density approximation. I - Optimal construction and classification results
p 67 A82-32344

The use of contextual information to detect cumulus clouds and cloud shadows in Landsat data
p 67 A82-32346

Evaluation of spruce-fir forests using small-format photographs p 8 A82-32707

Sample design for estimating change in land use and land cover p 24 A82-32711

Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896

Monitoring land-cover change by principal component analysis of multitemporal Landsat data
p 68 A82-32906

Terrain analysis from Landsat using a color TV enhancement system p 68 A82-32911

Coastal environment change analysis by Landsat MSS data p 54 A82-34219

Site selection and engineering issues for a major industrial complex - Application of image and map interpretation p 25 A82-34711

A computerized spatial analysis system for assessing wildlife habitat from vegetation maps p 9 A82-34716

Comparing lineaments interpreted from Landsat imagery and topographic maps with reported faults in southwest Montana p 34 A82-34719

A quantitative method to test for similarity between photo interpreters p 69 A82-34722

Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735

Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139

Significance of tectonics in linear feature detection and interpretation on satellite images p 42 A82-37198

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions
[E82-10181] p 85 N82-23568

Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco
[E82-10315] p 74 N82-24588

Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming
[E82-10356] p 20 N82-26754

Exploration into technical procedures for vertical integration --- information systems
[NASA-CR-166352] p 75 N82-26763

PHOTOMAPPING

Riparian vegetation mapping in Northeastern California using high altitude color infrared aerial photography
p 5 A82-29528

Multi-resource inventory in interior Alaska
p 6 A82-29532

Mapping riparian vegetation in Southeastern Oregon using digitized large scale color infra-red aerial photography p 6 A82-29535

Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539

Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304

Dependent feature trees for density approximation. I - Optimal construction and classification results
p 67 A82-32344

Spectroscopic remote sensing for geological applications p 41 A82-32442

Multispectral mapper - Imaging spectroscopy as applied to the mapping of earth resources p 77 A82-32448

Digitally enhanced visual displays facilitate the analysis of Landsat imagery p 67 A82-32507

Landsat detection of hardwood forest clearcuts
p 8 A82-32706

Computation with physical values from Landsat digital data p 68 A82-32709

Impacts of remote sensing on U.S. geography
p 24 A82-32899

Geographic location of individual pixels --- for thermal infrared digital data processing p 68 A82-32900

Technical and economical characteristics of the AFA-TES-10M aerial camera p 79 A82-34470

A computerized spatial analysis system for assessing wildlife habitat from vegetation maps p 9 A82-34716

Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731

The use of Skylab S-190B photography for small scale mapping p 80 A82-34742

Aerial photography vs. Landsat for digital land-cover mapping in an urban watershed p 61 A82-34745

The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174

Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco
[E82-10347] p 19 N82-26745

Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752

PHOTOMAPS

Experience with the compilation of maps of snow-cover melting in the central part of the European USSR on the basis of satellite data p 62 A82-35134

PHOTON BEAMS

Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587

PHOTOOXIDATION

Ammonia and the NOx budget of the troposphere
p 27 A82-36293

PHOTOSYNTHESIS

Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742

PLANET EPHEMERIDES

The Seasat altimeter data and its accuracy assessment p 49 A82-29602

The Seasat altimeter mean sea surface model
p 51 A82-29614

PLANETARY MAGNETIC FIELDS

MAGSAT anomaly map and continental drift
[E82-10326] p 38 N82-24599

Models and maps of the main field
[E82-10327] p 74 N82-24600

PLANETARY MAPPING

A color-ratio map of Mercury p 31 A82-22294

Initial vector magnetic anomaly map from Magsat
p 32 A82-30785

PLANKTON

HCMM hydrological analysis in Utah
[E82-10328] p 63 N82-24601

PLANT STRESS

A meteorologically driven maize stress indicator model
[E82-10112] p 11 N82-23564

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence
[E82-10207] p 12 N82-23580

A meteorologically driven grain sorghum stress indicator model
[E82-10218] p 13 N82-23591

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions
[E82-10225] p 14 N82-23598

Multilevel measurements of surface temperature over undulating terrain planted to barley
[E82-10245] p 16 N82-24523

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas
[E82-10349] p 19 N82-26747

PLANTING

Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566

AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581

A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591
Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton [E82-10220] p 13 N82-23593
Description of the FORTRAN implementation of the spring small grains planting date distribution model [E82-10235] p 15 N82-23608

PLANTS (BOTANY)
Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981 p 5 A82-29526
Remote sensing of leaf water content in the near infrared p 8 A82-32897
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913
The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana [E82-10341] p 46 N82-25603

PLASMA COMPOSITION
A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609

PLATES (TECTONICS)
Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304
A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10316] p 38 N82-24589
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10317] p 38 N82-24590
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10318] p 38 N82-24591
Geotectonics of South America --- regional magnetic and gravity anomalies of South America [E82-10320] p 38 N82-24593

PLUMES
Meteorological analysis of the eruption of Soufriere in April 1979 p 24 A82-33655
Airborne lidar measurements of the Soufriere eruption of 17 April 1979 p 24 A82-33657
Fine particles in the Soufriere eruption plume p 24 A82-33659
In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program [NASA-TM-84471] p 30 N82-25661

POGO
Verification of the crustal component in satellite magnetic data p 32 A82-30789

POLAR CAPS
Extremely high latitude auroras p 76 A82-31020

POLAR ORBITS
Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891

POLAR REGIONS
Studies of high latitude current systems using MAGSAT vector data [E82-10188] p 71 N82-22622
Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere [E82-10244] p 36 N82-24522

POLAR SUBSTORMS
Observed magnetic substorm signatures at synchronous altitude p 26 A82-35534

POLAR WANDERING (GEOLOGY)
On reference coordinate systems used in polar motion determinations p 33 A82-32090
A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations [AD-A110765] p 39 N82-26268

POLARIZED LIGHT
A model of plant canopy polarization [E82-10233] p 15 N82-23606

POLLUTION MONITORING
Problems of the interpretation of aerial and satellite images of industrial smoke p 23 A82-30307
Detection of regional air pollution episodes utilizing satellite digital data in the visual range p 23 A82-31990
Depression of brightness temperature of sea surfaces covered with monomolecular oil films relative to clean water surfaces at 1.43 GHz p 54 A82-33322
EPA's new bubble and banking policies --- for environmental monitoring p 25 A82-33865
The use of remote-sensing data to identify the space-time variability of the quality of natural waters p 62 A82-35138
Aircraft measurements of NO/x/ in the lower troposphere above the coast of Japan p 26 A82-36247
Tropospheric CO measurement experiment from the second Space Shuttle flight p 27 A82-36292
A quantitative multispectral analysis system for aerial photographs applied to coastal planning p 55 A82-37505
Feasibility of laser-separation of 36 S and its use as an atmospheric tracer [DE82-000965] p 30 N82-27737

POLLUTION TRANSPORT
Aircraft measurements of NO/x/ in the lower troposphere above the coast of Japan p 26 A82-36247
A study of atmospheric diffusion from the LANDSAT imagery --- pollution transport over the ocean [E82-10360] p 58 N82-26758
Feasibility of laser-separation of 36 S and its use as an atmospheric tracer [DE82-000965] p 30 N82-27737
Field measurements in support of dispersion modeling in complex terrain (1980) [PB82-148644] p 39 N82-27882

POSITION (LOCATION)
A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations [AD-A110765] p 39 N82-26268

POSITRONS
The cosmic ray positron spectrum p 1 A82-22542
The electron and positron spectra in primary cosmic rays p 1 A82-22543
Dependence of earth spectrum of positrons and antiprotons on propagation models --- of cosmic radiation p 21 A82-22545

POSTMISSION ANALYSIS (SPACECRAFT)
OSTA-1 Post Mission Operation Report [NASA-TM-84191] p 84 N82-23258

POTASSIUM
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2 [DE82-001025] p 44 N82-23634
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 44 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C [DE81-027161] p 46 N82-25621
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D [DE81-027156] p 46 N82-25622
Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2 [DE82-000313] p 47 N82-25625
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1 [DE82-005533] p 47 N82-27806

POTENTIAL FIELDS
Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration [E82-10242] p 36 N82-24520

POWER SPECTRA
Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10308] p 37 N82-24582

PRECIPITATION (METEOROLOGY)
Remote sensing of precipitable water over the oceans from Nimbus 7 microwave measurements p 49 A82-28907

PRIMARY COSMIC RAYS
The electron and positron spectra in primary cosmic rays p 1 A82-22543
Comparison of the measured antiproton flux with that predicted by the 'leaky box' model p 1 A82-22544
The galactic origin of cosmic rays. I [CONF-810711-1] p 2 A82-22565
Origin of cosmic rays in galactic centre sources p 3 A82-22571
The energy spectra of cosmic ray variations inferred from the stratospheric measurements in 1972-1979 p 5 A82-22617
Primary spectral variations of cosmic rays above 1 GV p 5 A82-22618

PRIMITIVE EQUATIONS
Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX) p 56 N82-23900

PRINTED CIRCUITS
Effective electromagnetic shielding in multilayer printed circuit boards [AIAA 81-2333] p 59 A82-13528

PROBABILITY DENSITY FUNCTIONS
Dependent feature trees for density approximation. I - Optimal construction and classification results p 67 A82-32344

PROBABILITY THEORY
The use of prior probabilities in maximum likelihood classification of remotely sensed data p 68 A82-32904

PROJECT PLANNING
Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group [NASA-TM-84731] p 18 N82-25608

PROPAGATION MODES
A report on the 'cosmic ray propagation problem' p 1 A82-22539

PROTON ENERGY
Origin of cosmic rays in galactic centre sources p 3 A82-22571
High-energy solar protons p 22 A82-22588

PROTON FLUX DENSITY
Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594
Comparison of solar proton activity in 1967 and 1969 with that in 1978 and 1979 as measured onboard Venera 4, 6, 11, 12 space probes p 31 A82-22596
The solar proton fluxes in April, 1979 p 66 A82-22597
A description of relativistic solar particle propagation p 4 A82-22600
Non-flare injection of protons into interplanetary space p 4 A82-22601
On the anticorrelation between the He/3//He/4/ ratio and proton intensity in He/3/ rich flares p 40 A82-22613
The energy spectra of cosmic ray variations inferred from the stratospheric measurements in 1972-1979 p 5 A82-22617

PULSARS
Pulsar models and cosmic-ray acceleration p 21 A82-22570

PULSE RADAR
Pulse-to-pulse correlation in satellite radar altimeters --- for ocean wave height measurement p 55 A82-37390

Q

QUANTITATIVE ANALYSIS
Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912

QUANTUM THEORY
Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism p 64 A82-22575

QUARTZ
Influence of CO2 on melting of model granulite facies assemblages - A model for the genesis of charnockites p 42 A82-36298

R

RADAR
Movement of ice markers measured by satellite ranging [R-240] p 59 N82-27816

RADAR CROSS SECTIONS
The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617

RADAR DETECTION
Possible fault detection in Cottonball Basin, California An application of radar remote sensing p 41 A82-32896

RADAR ECHOES
Characteristics of field-aligned E region irregularities over Iioka /36 N/, Japan. I p 26 A82-36268

RADAR EQUIPMENT
Pulse-to-pulse correlation in satellite radar altimeters --- for ocean wave height measurement p 55 A82-37390

RADAR GEOLOGY
An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon [E82-10352] p 47 N82-26750

RADAR IMAGERY
A simulation study of soil moisture estimation by a space SAR p 60 A82-29333
The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623

The estimation of wave height from digitally processed SAR imagery p 67 A82-32347
On the synthetic aperture radar imaging of ocean surface waves p 53 A82-32881
Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882
Possible fault detection in Cottonball Basin, California An application of radar remote sensing p 41 A82-32898
Interpretation of vegetative cover in wetlands using four-channel SAR imagery p 9 A82-34706
C-band radar for determining surface soil moisture p 10 A82-37194
Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas [E82-10351] p 19 N82-26749
RADAR MEASUREMENT
Airborne lidar measurements of the Soufriere eruption of 17 April 1979 p 24 A82-33657
The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762
RADAR SCATTERING
Characteristics of 13.9 GHz radar scattering from oil films on the sea surface p 54 A82-33438
The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762
RADAR TARGETS
The recognition of extended targets - SAR images for level and hilly terrain p 33 A82-31994
RADIANCE
Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905
Effect of atmospheric conditions on remote sensing of vegetation parameters p 24 A82-32901
Influence of sky radiance distribution on the ratio technique for estimating bidirectional reflectance p 70 A82-35650
Ground support data from July 10 to July 29, 1978, for HCMM thermal satellite data of the Powder River Basin, Wyoming [E82-10211] p 72 N82-23584
RADIANT FLUX DENSITY
The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555
Comparison of brightness indicatrixes of snow cover measured from an aircraft and calculated theoretically for different heights of the atmosphere p 62 A82-35140
RADIATION COUNTERS
Relating Landsat digital count values to ground reflectance for optically thin atmospheric conditions p 66 A82-29762
RADIATION DISTRIBUTION
Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey p 82 A82-22549
Influence of sky radiance distribution on the ratio technique for estimating bidirectional reflectance p 70 A82-35650
RADIATION HAZARDS
Environmental monitoring report of the Lawrence Berkeley Laboratory, 1980 [LBL-12604] p 29 N82-23793
RADIATION MEASUREMENT
Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891
RADIATION PRESSURE
Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566
RADIATION SOURCES
The charge and isotopic composition of Z equals 7-16 cosmic ray nuclei at their source p 64 A82-22555
Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557
The galactic origin of cosmic rays. II [CONF-810711-2] p 64 A82-22573
RADIATION SPECTRA
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1 [DE82-001031] p 43 N82-23621
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1 [DE82-004159] p 44 N82-23639
Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2 [DE82-004165] p 45 N82-23640
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1 [DE82-004152] p 45 N82-23641
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2 [DE82-004164] p 45 N82-23642
RADIATIVE TRANSFER
A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910
Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study [E82-10190] p 42 N82-22624
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10243] p 45 N82-24521
Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas [E82-10349] p 19 N82-26747
RADIO ALTIMETERS
The Seasat altimeter data and its accuracy assessment p 49 A82-29602
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607
Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608
Seasat altimeter timing bias estimation p 50 A82-29609
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
Comparison data for Seasat altimetry in the western North Atlantic p 50 A82-29611
Waveheight and wind speed measurements from the Seasat radar altimeter p 50 A82-29612
Seasat altimeter determination of ocean current variability p 50 A82-29613
The Seasat altimeter mean sea surface model p 51 A82-29614
Pulse-to-pulse correlation in satellite radar altimeters --- for ocean wave height measurement p 55 A82-37390
RADIO AURORAS
Large amplitude undulations on the equatorward boundary of the diffuse aurora p 76 A82-31019
RADIO EMISSION
Angular variations of nonthermal radio emission from the Galaxy relevant to the structure of interstellar magnetic field p 83 A82-22550
RADIO FREQUENCY INTERFERENCE
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442
RADIO PROBING
Influence of sky radiance distribution on the ratio technique for estimating bidirectional reflectance p 70 A82-35650
RADIO SOURCES (ASTRONOMY)
The definition of the terrestrial coordinate frame by long baseline interferometry p 33 A82-32084
Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096
RADIO WAVE REFRACTION
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442
RADIOMETERS
Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer p 8 A82-34179
Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2 [DE82-004168] p 44 N82-23636
Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A [DE81-027158] p 46 N82-25620
Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D [DE81-027156] p 46 N82-25622
Irrigation management with remote sensing --- Navajo Indian Irrigation Project [E82-10357] p 20 N82-26755
Satellite observations in FRONTS 80 [AD-A111080] p 58 N82-26766
Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1 [DE82-005542] p 47 N82-27804
RADIOMETRIC CORRECTION
Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912
View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914
Measuring sea surface temperature from satellites - A ground truth approach p 54 A82-32917
RADIOMETRIC RESOLUTION
Evaluation of VICAR software capability for land information support system needs --- Elk River quadrangle, Idaho [E82-10223] p 73 N82-23596
RAIN
A statistical approach to rainfall estimation using satellite and conventional data [NOAA-TR-NESS-89] p 63 N82-22854
RANGELANDS
Estimating rangeland cover proportions with large-scale color-infrared aerial photographs p 6 A82-29534
An analysis of LANDSAT MSS scene-to-scene registration accuracy [E82-10285] p 16 N82-24563
REFLECTANCE
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans [E82-10227] p 14 N82-23600
Canopy reflectance as influenced by solar illumination angle [E82-10237] p 15 N82-23610
Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming [E82-10356] p 20 N82-26754
REFLECTED WAVES
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
REFRACTIVITY
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442
REGIONAL PLANNING
A legislator's guide to LANDSAT [E82-10290] p 85 N82-24568
REGRESSION ANALYSIS
A comparison of stratified versus regression estimators p 11 N82-23133
RELATIVISTIC ELECTRON BEAMS
Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552
RELATIVISTIC PARTICLES
A description of relativistic solar particle propagation p 4 A82-22600
RELIABILITY ENGINEERING
A practical study of gross-error detection in bundle adjustment p 69 A82-34702
RELIEF MAPS
Bathymetric imaging p 69 A82-34720
REMOTE SENSING
Detection of environmental disturbance using color aerial photography and thermal infrared imagery p 22 A82-29327
A simulation study of soil moisture estimation by a space SAR p 60 A82-29333
Remote sensing of the weediness of crop fields p 5 A82-29435
Color aerial photography in the plant sciences and related fields; Proceedings, of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981 p 5 A82-29526
Development and application of panoramic aerial photography in forest pest management p 5 A82-29527
Riparian vegetation mapping in Northeastern California using high altitude color infrared aerial photography p 5 A82-29528
Inventory of wildlife habitat from color infrared aerial photography for Cobb Island, Virginia p 6 A82-29529
Color aerial photography detects nutrient status of loblolly pine plantations p 6 A82-29531
Application of 35mm color aerial photography to forest land change detection p 6 A82-29533
Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537
Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539
The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616
Desert locust habitat monitoring with satellite remote sensing A new technology for an old problem p 7 A82-29747
Thermography - A remote sensing method with many perspectives p 76 A82-29922
Space to the earth --- Russian book on space technology applications p 83 A82-30850
The use of the SPOT satellite in natural resource evaluation p 83 A82-31996
Extraction of line shaped objects from aerial images using a special operator to analyze the profiles of functions p 67 A82-32033

Remote sensing of tornadic storms from geosynchronous satellite infrared digital data
p 23 A82-32348

Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440

Spectroscopic remote sensing for geological applications p 41 A82-32442

High spectral resolution airborne spectrometry
p 77 A82-32443

Laser-induced bioluminescence --- for remote sensing of marine organisms p 53 A82-32559

Impacts of remote sensing on U.S. geography
p 24 A82-32899

Effect of atmospheric conditions on remote sensing of vegetation parameters p 24 A82-32901

Infrared sensing of sea surface temperature from space p 53 A82-32902

Nearshore current pattern off south Texas - An interpretation from aerial photographs
p 53 A82-32903

The use of prior probabilities in maximum likelihood classification of remotely sensed data
p 68 A82 32904

Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912

Snowpack monitoring in North America and Eurasia using passive microwave satellite data
p 78 A82-32915

Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery
p 68 A82-32916

Remote sensing of the earth's resources - The Soviet experience p 84 A82-33555

Irradiance measurement errors due to the assumption of a Lambertian reference panel p 79 A82-34222

ERS-1 European remote sensing satellite
p 84 A82-34367

American Society of Photogrammetry, Annual Meeting, 47th, Washington, DC, February 22-27, 1981, ASP Technical Papers p 79 A82-34701

Image processing with microcomputers in remote sensing p 79 A82-34708

Site selection and engineering issues for a major industrial complex - Application of image and map interpretation p 25 A82-34711

RAMS-1, a Resource Analysis and Mapping System
p 69 A82 34726

Remote sensing of thermal subsurface terrain properties p 80 A82-34727

Remote sensing - A potential aid in the preparation of an urban tree inventory p 9 A82-34732

Monitoring deforestation in the eastern part of the state of Guerrero, Mexico p 9 A82-34733

Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735

A new approach to multiresource inventories using remote sensing and geographic information systems technologies p 25 A82-34739

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

Study of the hydrological cycle by aerospace methods --- Russian book p 61 A82-35126

Principles and methods of the study of the hydrological cycle on the basis of aerospace data p 61 A82-35127

The possibility of using remote-sensing methods to study the hydrology of elementary watersheds
p 61 A82-35130

The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting
p 61 A82-35131

The use of remote-sensing data to identify the space-time variability of the quality of natural waters
p 62 A82-35138

Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139

Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images
p 70 A82-35141

The use of microwave radiometry for the determination of snow cover height p 80 A82-36018

Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415

Space science for applications - The history of Landsat p 84 A82-36617

Satellite radiation measurements for the retrieval of the vertical temperature profiles p 70 A82-36935

Landsat D to yield more precise data
p 70 A82-37200

Spatial resolution requirements for urban studies
p 29 A82-37502

Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands
p 10 A82-37503

Advanced technology for earth observation - Data processing
[AAS PAPER 82-130] p 71 A82-37810

Solid state instrumentation concepts for earth resource observation
[AAS PAPER 82-132] p 81 A82-37812

Civil land remote sensing system
[GPO-87-070] p 84 N82-22630

Use of NOAA/AVHRR visible and near-infrared data for land remote sensing
[NASA-TM-84186] p 81 N82-22643

AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597

Agricultural Research Service research highlights in remote sensing for calendar year 1980
[E82-10228] p 14 N82-23601

Cost-effectiveness of geographic surveying from space p 85 N82-24263

Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group
[NASA-TM-84731] p 18 N82-25608

Experimental assessment of improved spatial resolution LANDSAT data
[AD-A110538] p 75 N82-26765

Rapid oceanographic data gathering: Some problems in using remote sensing to determine the horizontal and vertical thermal distributions in the Northeast Pacific Ocean
[AD-A111005] p 58 N82-26945

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 31 N82-27802

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 31 N82-27803

REMOTE SENSORS

Magnetic anomalies as a reference for ground-speed and map-matching navigation p 32 A82-30314

A system design for a multispectral sensor using two-dimensional solid-state imaging arrays
p 77 A82-31991

Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658

An optical objective lens for earth observations by satellites p 78 A82-32824

View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914

Characteristics of 13.9 GHz radar scattering from oil films on the sea surface p 54 A82-33438

EPA's new bubble and banking policies --- for environmental monitoring p 25 A82-33865

An information-theoric spatial transform
p 69 A82-34717

Bathymetric imaging p 69 A82-34720

Longwave infrared observation of urban landscapes
p 25 A82-34744

Evaluation of the accuracy of water-surface temperature measurement by means of airborne infrared radiometers
p 62 A82-35136

Microwave sensing from space
[AAS PAPER 82-127] p 80 A82-37809

Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605

In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program
[NASA-TM-84471] p 30 N82-25661

RESEARCH

Agricultural Research Service research highlights in remote sensing for calendar year 1980
[E82-10228] p 14 N82-23601

RESEARCH FACILITIES

Environmental monitoring report of the Lawrence Berkeley Laboratory, 1980
[LBL-12604] p 29 N82-23793

RESEARCH MANAGEMENT

Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group
[NASA-TM-84731] p 18 N82-25608

RESERVOIRS

Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil
[E82-10291] p 63 N82-24569

RESIDENTIAL AREAS

Detecting residential land-use development at the urban fringe p 22 A82-29332

RESOURCES MANAGEMENT

Multi-resource inventory in interior Alaska
p 6 A82-29532

Streamlining and ensuring mineral development must begin at local land management levels
[EMD-82-10] p 29 N82-23043

Agricultural Research Service research highlights in remote sensing for calendar year 1980
[E82-10228] p 14 N82-23601

AgRISTARS: Agriculture and resources inventory surveys through aerospace remote sensing
[E82-10236] p 15 N82-23609

Remote automatic weather station for resource and fire management agencies
[PB82-107335] p 30 N82-23963

A legislator's guide to LANDSAT
[E82-10290] p 85 N82-24568

RESPONSE BIAS

Bias correction procedures for airborne laser hydrography
[PB82-130089] p 63 N82-22644

RETURN BEAM VIDICONS

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

RHEOLOGY

Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

RING CURRENTS

Improved definition of crustal magnetic anomalies for MAGSAT data
[E82-10314] p 37 N82-24587

RIVER BASINS

The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting
p 61 A82-35131

The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period
p 61 A82-35132

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming
[E82-10356] p 20 N82-26754

RIVERS

The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period
p 61 A82-35132

Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2
[DE82-000316] p 44 N82-23631

Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil
[E82-10291] p 63 N82-24569

ROCKS

The mineralogy of global magnetic anomalies --- rock magnetic signatures and MAGSAT geological, and gravity correlations in West Africa
[E82-10305] p 45 N82-24579

RODS

Nonlinear theory for elastic beams and rods and its finite element representation
[WTHD-143] p 73 N82-24517

RURAL LAND USE

Monitoring deforestation in the eastern part of the state of Guerrero, Mexico p 9 A82-34733

Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626

Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588

S

SALINITY

Problems associated with remotely detecting and monitoring saline sites within irrigated Alberta
p 9 A82-34710

SANDS

Remote sensing in Scotland using data received from satellites - A study of the Tay Estuary region using Landsat multispectral scanning imagery p 62 A82-37501

Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

SATELLITE ANTENNAS

Movement of ice markers measured by satellite ranging
[R-240] p 59 N82-27816

SATELLITE DESIGN

LANDSAT-D thermal analysis and design support
[E82-10346] p 82 N82-26744

SATELLITE GROUND SUPPORT

Advanced technology for earth observation - Data processing
[AAS PAPER 82-130] p 71 A82-37810

SATELLITE GROUND TRACKS
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
SATELLITE OBSERVATION
Solar gamma-ray experiment on Astro-A satellite p 21 A82-22583
The relation of type II radio bursts to solar energetic particles observed at earth p 3 A82-22591
A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon p 4 A82-22592
Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593
Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598
Low-energy particles in interplanetary magnetic field near the sectorial boundary on September 26, 1977 p 4 A82-22602
Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905
The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623
A study of the earth's radiation budget using a general circulation model p 52 A82-30666
Magsat scalar anomaly distribution - The global perspective p 41 A82-30786
A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795
Extremely high latitude auroras p 76 A82-31020
Emissivity and reflectance of the model sea surface for the use of AVHRR data of NOAA satellites p 52 A82-31294
Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
Geoid height-age relation from Seasat altimeter profiles across the Mendocino Fracture Zone p 34 A82-32646
An optical objective lens for earth observations by satellites p 78 A82-32824
Geostationary satellite observations of the April 1979 Soufriere eruptions p 24 A82-33654
Earth observations from space - Trends and prospects p 84 A82-34116
Observed magnetic substorm signatures at synchronous altitude p 26 A82-35534
Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196
Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405
Microwave sensing from space
[AAS PAPER 82-127] p 80 A82-37809
A statistical approach to rainfall estimation using satellite and conventional data
[NOAA-TR-NESS-89] p 63 N82-22854
Comparison of satellite derived radiation budget measurements over MONEX during 1979 to 1980 --- Monsoon Experiment (MONEX) p 29 N82-23891
History of the French satellite space program p 85 N82-24216
A comparison of pole positions derived from GPS satellite and Navy navigation satellite observations
[AD-A110765] p 39 N82-26268
SATELLITE SOUNDING
Magnetic charts of Canada derived from Magsat data p 32 A82-30778
Initial scalar magnetic anomaly map from Magsat p 32 A82-30784
Remote sensing of tornadic storms from geosynchronous satellite infrared digital data p 23 A82-32348
Satellite observations of sea surface temperature around the British Isles p 54 A82-33717
Total ozone retrieval from satellite Meteor 28 Fourier spectrometer measurements p 28 A82-36422
Satellite radiation measurements for the retrieval of the vertical temperature profiles p 70 A82-36935
SATELLITE TELEVISION
The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting p 61 A82-35131
SATELLITE TEMPERATURE
LANDSAT-D thermal analysis and design support
[E82-10346] p 82 N82-26744
SATELLITE TRACKING
Spatial resolution and repeatability of Magsat crustal anomaly data over the Indian Ocean p 32 A82-30788
Representativeness of cloud motion winds deduced from GOES Indian Ocean satellite imagery for the description of the Indian summer monsoon --- superpressure balloons for the study of the Indian summer monsoon (BALSAMINE) p 55 N82-23879
SATELLITE TRANSMISSION
Purpose, background of 'Intercosmos-21' mission p 81 N82-24264
SATELLITE-BORNE INSTRUMENTS
Seasat measurement system evaluation - Achievements and limitations p 49 A82-29601
The Seasat altimeter data and its accuracy assessment p 49 A82-29602
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
Waveheight and wind speed measurements from the Seasat radar altimeter p 50 A82-29612
Seasat altimeter determination of ocean current variability p 50 A82-29613
The Seasat altimeter mean sea surface model p 51 A82-29614
The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616
The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617
Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
Description of Seasat radiometer status and results p 52 A82-29622
Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624
Space to the earth --- Russian book on space technology applications p 83 A82-30850
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442
Evaluation of NOAA-AVHRR data for crop assessment --- Advanced Very High Resolution Radiometer p 8 A82-34179
Allowance for the effect of the atmosphere in the processing of satellite remote-sensing images p 70 A82-35141
Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824
Pulse-to-pulse correlation in satellite radar altimeters --- for ocean wave height measurement p 55 A82-37390
Advanced technology for earth observation - Data processing
[AAS PAPER 82-130] p 71 A82-37810
LANDSAT-D conical scanner evaluation plan
[E82-10340] p 81 N82-25602
Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605
SATELLITE-BORNE PHOTOGRAPHY
The use of residual images in Landsat image analysis p 66 A82-29328
Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/ p 41 A82-30305
Problems of the interpretation of aerial and satellite images of industrial smoke p 23 A82-30307
Large amplitude undulations on the equatorward boundary of the diffuse aurora p 76 A82-31019
Detection of volcanic smoke and ash-fall area at volcano Aso, from Landsat MSS data p 23 A82-31295
Detection of regional air pollution episodes utilizing satellite digital data in the visual range p 23 A82-31990
Dependent feature trees for density approximation. I - Optimal construction and classification results p 67 A82-32344
Evaluation of temporal registration of Landsat scenes p 67 A82-32345
The use of contextual information to detect cumulus clouds and cloud shadows in Landsat data p 67 A82-32346
Resource inventory techniques used in the California Desert Conservation Area p 23 A82-32441
Digitally enhanced visual displays facilitate the analysis of Landsat imagery p 67 A82-32507
A ship and satellite view of hydrographic features in the western Gulf of Mexico p 53 A82-32651
Landsat detection of hardwood forest clearcuts p 8 A82-32708
Computation with physical values from Landsat digital data p 68 A82-32709
Geographic location of individual pixels --- for thermal infrared digital data processing p 68 A82-32900
Monitoring land-cover change by principal component analysis of multitemporal Landsat data p 68 A82-32906
The response characteristics of vegetation in Landsat MSS digital data p 8 A82-32907
Field size, length, and width distributions based on LACIE ground truth data --- large area crop inventory experiment p 8 A82-32909
Terrain analysis from Landsat using a color TV enhancement system p 68 A82-32911
Problems associated with remotely detecting and monitoring saline sites within irrigated Alberta p 9 A82-34710
Comparing lineaments interpreted from Landsat imagery and topographic maps with reported faults in southwest Montana p 34 A82-34719
Landsat in the search for Appalachian hydrocarbons p 42 A82-34721
Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735
A new approach to multiresource inventories using remote sensing and geographic information systems technologies p 25 A82-34739
The use of Skylab S-190B photography for small scale mapping p 80 A82-34742
Study of the hydrological cycle by aerospace methods --- Russian book p 61 A82-35126
Principles and methods of the study of the hydrological cycle on the basis of aerospace data p 61 A82-35127
Water-balance differentiation of natural complexes on the basis of satellite photographs p 61 A82-35129
The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period p 61 A82-35132
Method for the analysis of the melting of a firn complex on the basis of aerospace photographs p 61 A82-35133
Experience with the compilation of maps of snow-cover melting in the central part of the European USSR on the basis of satellite data p 62 A82-35134
Status and prospects of the automated processing of remote-sensing data /using forest surveys as an example/ p 10 A82-35139
The meteorological product - 'Cloud-top height' p 70 A82-36043
Space science for applications - The history of Landsat p 84 A82-36617
Design guidelines for satellite image data distribution systems p 70 A82-37048
The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174
Determination of winter temperature patterns, fronts, and surface currents in the Yellow Sea and East China Sea from satellite imagery p 55 A82-37195
Significance of tectonics in linear feature detection and interpretation on satellite images p 42 A82-37198
Landsat D to yield more precise data p 70 A82-37200
SCALE (RATIO)
Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099
SCANNING
Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539
SCATTEROMETERS
The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616
The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617
Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618
Surface wind analyses for Seasat p 51 A82-29619
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
SEASAT: A satellite scatterometer illumination times of selected in situ sites
[NASA-TM-83280] p 81 N82-22865
Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas
[E82-10361] p 20 N82-26759
SCENE ANALYSIS
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913
Coastal environment change analysis by Landsat MSS data p 54 A82-34219
Separation of diffuse from sharp-edged features in digital imagery p 68 A82-34225
An analysis of LANDSAT MSS scene-to-scene registration accuracy
[E82-10285] p 16 N82-24563
Image understanding research
[AD-A110746] p 74 N82-25611

SCHEDULES
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test [E82-10224] p 14 N82-23597
SEA ICE
Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609
SEA STATES
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607
Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608
The METEOSAT Data Collection System and its application p 75 N82-26037
SEA TRUTH
A ship and satellite view of hydrographic features in the western Gulf of Mexico p 53 A82-32651
SEA WATER
Technology and oceanography: An assessment of Federal technologies for oceanographic research and monitoring. Volume 2: Working papers on fishery research technology p 58 N82-26944
SEAMOUNTS
A search for seamounts in the southern Cook and Austral region p 52 A82-30810
SEAS
High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979 [E82-10324] p 57 N82-24597
SEASAT SATELLITES
Seasat measurement system evaluation - Achievements and limitations p 49 A82-29601
The Seasat altimeter data and its accuracy assessment p 49 A82-29602
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604
An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607
Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608
Seasat altimeter timing bias estimation p 50 A82-29609
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
Waveheight and wind speed measurements from the Seasat radar altimeter p 50 A82-29612
Seasat altimeter determination of ocean current variability p 50 A82-29613
The Seasat altimeter mean sea surface model p 51 A82-29614
Gravity model improvement for Seasat p 32 A82-29615
Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618
Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621
Description of Seasat radiometer status and results p 52 A82-29622
The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623
Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624
A search for seamounts in the southern Cook and Austral region p 52 A82-30810
The estimation of wave height from digitally processed SAR imagery p 67 A82-32347
Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882
Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743
SEASAT-A SATELLITE
Seasat altimeter height calibration --- related to sea surface heights near Bermuda p 49 A82-29603
The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616
The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617
Surface wind analyses for Seasat p 51 A82-29619
SEASAT: A satellite scatterometer illumination times of selected in situ sites [NASA-TM-83280] p 81 N82-22865
SECONDARY COSMIC RAYS
The cosmic ray positron spectrum p 1 A82-22542
SECULAR VARIATIONS
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10310] p 37 N82-24584
SEDIMENT TRANSPORT
Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil [E82-10291] p 63 N82-24569
SEDIMENTS
Fluid-sediment interactions on beaches and shelves [AD-A110838] p 59 N82-26948
SEISMOLOGY
Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832
Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915
SENSITIVITY
Orbiting passive microwave sensor simulation applied to soil moisture estimation [E82-10343] p 18 N82-25605
SENSITOMETRY
Sensitometry in Canadian aerial survey p 79 A82-34724
SHADOWS
The use of contextual information to detect cumulus clouds and cloud shadows in Landsat data p 67 A82-32346
SHOCK FRONTS
The model of the cosmic ray enrichment by helium-3 p 31 A82-22614
SHOCK WAVE PROPAGATION
Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona p 3 A82-22589
On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599
SHOCK WAVES
Mass per charge ratio in hot plasmas and cosmic ray source composition p 2 A82-22557
Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607
SHORELINES
Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2 [DE82-000340] p 43 N82-23626
Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2 [DE82-000315] p 43 N82-23628
Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2 [DE82-000309] p 43 N82-23629
Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2 [DE82-000308] p 43 N82-23630
Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2 [DE82-000316] p 44 N82-23631
Identifying environmental features for land management decisions --- Utah [E82-10289] p 30 N82-24567
Fluid-sediment interactions on beaches and shelves [AD-A110838] p 59 N82-26948
SIERRA NEVADA MOUNTAINS (CA)
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625
SIGNAL PROCESSING
Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882
SIGNAL TRANSMISSION
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293
SIGNATURE ANALYSIS
Irrigation management with remote sensing --- Navajo Indian Irrigation Project [E82-10357] p 20 N82-26755
SILICATES
Laboratory studies of actinide metal-silicate fractionation p 49 A82-22306
SILICON RADIATION DETECTORS
Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766
SITE SELECTION
Site selection and engineering issues for a major industrial complex - Application of image and map interpretation p 25 A82-34711
SEASAT: A satellite scatterometer illumination times of selected in situ sites [NASA-TM-83280] p 81 N82-22865
SKY RADIATION
Influence of sky radiance distribution on the ratio technique for estimating bidirectional reflectance p 70 A82-35650
SKYLAB PROGRAM
The use of Skylab S-190B photography for small scale mapping p 80 A82-34742
SLOPES
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains [E82-10205] p 11 N82-23578
Topographic slope correction for analysis of thermal infrared images [E82-10214] p 36 N82-23587
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation [E82-10243] p 45 N82-24521
SMOKE
Problems of the interpretation of aerial and satellite images of industrial smoke p 23 A82-30307
Detection of volcanic smoke and ash-fall area at volcano Aso, from Landsat MSS data p 23 A82-31295
SMS 1
Geostationary satellite observations of the April 1979 Soufriere eruptions p 24 A82-33654
SNOW
The growth of snow in winter storms - An airborne observational study p 60 A82-33329
SNOW COVER
A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910
Snowpack monitoring in North America and Eurasia using passive microwave satellite data p 78 A82-32915
Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735
The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting p 61 A82-35131
The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period p 61 A82-35132
Method for the analysis of the melting of a firn complex on the basis of aerospace photographs p 61 A82-35133
Experience with the compilation of maps of snow-cover melting in the central part of the European USSR on the basis of satellite data p 62 A82-35134
Comparison of brightness indicatrixes of snow cover measured from an aircraft and calculated theoretically for different heights of the atmosphere p 62 A82-35140
The use of microwave radiometry for the determination of snow cover height p 80 A82-36018
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625
Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643
SOIL MAPPING
Problems associated with remotely detecting and monitoring saline sites within irrigated Alberta p 9 A82-34710
The influence of soil characteristics on regional convection differences above Northern Germany p 10 A82-37589
Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana [OGMR-56] p 42 N82-22636
Use of LANDSAT data to define soil boundaries in Carroll County, Missouri p 10 N82-23116
AgRISTARS: Agriculture and resources inventory surveys through aerospace remote sensing [E82-10236] p 15 N82-23609
SOIL MOISTURE
A simulation study of soil moisture estimation by a space SAR p 60 A82-29333
Remote sensing of leaf water content in the near infrared p 8 A82-32897
Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913
The possibility of using remote-sensing methods to study the hydrology of elementary watersheds p 61 A82-35130
C-band radar for determining surface soil moisture p 10 A82-37194
The influence of soil characteristics on regional convection differences above Northern Germany p 10 A82-37589
A meteorologically driven maize stress indicator model [E82-10112] p 11 N82-23564
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors [E82-10212] p 12 N82-23585

Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590

A meteorologically driven grain sorghum stress indicator model
[E82-10218] p 13 N82-23591

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions
[E82-10225] p 14 N82-23598

A multi-frequency radiometric measurement of soil moisture content over bare and vegetated fields
[E82-10238] p 16 N82-23611

Multilevel measurements of surface temperature over undulating terrain planted to barley
[E82-10245] p 16 N82-24523

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576

A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri
[E82-10311] p 17 N82-24585

Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota
[E82-10329] p 18 N82-24602

Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605

Plan of research for integrated soil moisture studies. Recommendations of the Soil Moisture Working Group
[NASA-TM-84731] p 18 N82-25608

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements
[E82-10313] p 82 N82-26743

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas
[E82-10349] p 19 N82-26747

Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas
[E82-10351] p 19 N82-26749

Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas
[E82-10361] p 20 N82-26759

Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas
[E82-10362] p 20 N82-26760

The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762

SOIL SCIENCE

Use of LANDSAT data to define soil boundaries in Carroll County, Missouri p 10 N82-23116

SOILS

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585

Delineation of soil temperature regimes from HCMM data
[E82-10298] p 17 N82-24574

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula
[E82-10299] p 17 N82-24575

The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762

SOLAR ACTIVITY

Comparison of solar proton activity in 1967 and 1969 with that in 1978 and 1979 as measured onboard Venera 4, 6, 11, 12 space probes p 31 A82-22596

The solar proton fluxes in April, 1979
p 66 A82-22597

Non-flare injection of protons into interplanetary space
p 4 A82-22601

SOLAR ACTIVITY EFFECTS

International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3
p 65 A82-22580

Model for solar hard X-ray bursts p 65 A82-22581

Solar gamma-ray experiment on Astro-A satellite
p 21 A82-22583

High-energy solar protons p 22 A82-22588

Preflare increases in solar cosmic rays relevant to the mode of energy accumulation in the active regions associated with large flares p 31 A82-22595

The modulation characteristics of the 19th and 20th solar activity cycles p 59 A82-22615

SOLAR ATMOSPHERE

Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics
p 83 A82-22603

SOLAR CORONA

Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona
p 3 A82-22589

Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599

Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607

A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609

SOLAR CORPUSCULAR RADIATION

Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

The relation of type II radio bursts to solar energetic particles observed at earth p 3 A82-22591

Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593

A tentative ordering of all available solar energetic particles abundance observations. I - The mass unbiased baseline. II - Discussion and comparison with coronal abundances p 40 A82-22609

Heavy-element abundances in He/3/-rich events
p 5 A82-22611

SOLAR COSMIC RAYS

Comparative abundances in solar energetic particles and in galactic cosmic ray sources, and the Ne-22 anomaly
p 83 A82-22556

International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3
p 65 A82-22580

Preflare increases in solar cosmic rays relevant to the mode of energy accumulation in the active regions associated with large flares p 31 A82-22595

On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599

A description of relativistic solar particle propagation
p 4 A82-22600

Low-energy particles in interplanetary magnetic field near the sectorial boundary on September 26, 1977
p 4 A82-22602

The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics
p 83 A82-22603

The approximate 1 GeV solar cosmic rays in the Forbush-effect of February 15, 1978 p 40 A82-22604

Coulombian energy losses and the nuclear composition of the solar cosmic rays p 4 A82-22610

The model of the cosmic ray enrichment by helium-3
p 31 A82-22614

Primary spectral variations of cosmic rays above 1 GV
p 5 A82-22618

SOLAR CYCLES

The modulation characteristics of the 19th and 20th solar activity cycles p 59 A82-22615

SOLAR ELECTRONS

Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

Low-energy particles in interplanetary magnetic field near the sectorial boundary on September 26, 1977
p 4 A82-22602

SOLAR FLARES

International Cosmic Ray Conference, 17th, Paris, France, July 13-25, 1981, Conference Papers. Volume 3
p 65 A82-22580

Model for solar hard X-ray bursts p 65 A82-22581

The determination of differential X-ray spectrum of the solar flare using ionospheric data p 65 A82-22582

Solar gamma-ray experiment on Astro-A satellite
p 21 A82-22583

Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584

Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

Observations of interplanetary energetic charged particles from gamma-ray line solar flares
p 65 A82-22586

High-energy solar protons p 22 A82-22588

Azimuthal propagation of flare particles in the heliosphere p 66 A82-22590

The relation of type II radio bursts to solar energetic particles observed at earth p 3 A82-22591

A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon
p 4 A82-22592

Energetic solar particle spectra according to Venera-11, 12 and Prognoz-5, 6 p 4 A82-22593

Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594

Preflare increases in solar cosmic rays relevant to the mode of energy accumulation in the active regions associated with large flares p 31 A82-22595

Spacecraft determination of energetic particle propagation parameters - The 1 January 1978 solar event p 31 A82-22598

The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics
p 83 A82-22603

Time and energy dependence of heavy ion abundances in solar flare energetic particle events
p 22 A82-22605

High resolution measurements of solar flare isotopes
p 22 A82-22606

Observations of the ionization states of energetic particles accelerated in solar flares p 40 A82-22607

Is the neon composition of our sun, planetary or solar
p 76 A82-22608

A comparison of helium and heavy ion spectra in He/3/ rich solar flares with a model calculation
p 5 A82-22612

On the anticorrelation between the He/3//He/4/ ratio and proton intensity in He/3/ rich flares
p 40 A82-22613

Primary spectral variations of cosmic rays above 1 GV
p 5 A82-22618

SOLAR FLUX DENSITY

The solar proton fluxes in April, 1979
p 66 A82-22597

SOLAR MAGNETIC FIELD

Features of cosmic ray variations due to variations in the total magnetic field of the sun p 49 A82-22619

SOLAR MAXIMUM MISSION

Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584

Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

SOLAR ORBITS

Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096

SOLAR POSITION

Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566

Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton
[E82-10220] p 13 N82-23593

Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610

The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169083] p 57 N82-26525

SOLAR PROMINENCES

Non-flare injection of protons into interplanetary space
p 4 A82-22601

SOLAR PROTONS

Unusual properties of particle events associated with solar flare gamma ray events p 65 A82-22585

High-energy solar protons p 22 A82-22588

A survey of solar protons and alpha differential spectra between 1 and greater than 400 MeV/nucleon
p 4 A82-22592

Evolution of the solar proton spectrum in interplanetary space p 4 A82-22594

Comparison of solar proton activity in 1967 and 1969 with that in 1978 and 1979 as measured onboard Venera 4, 6, 11, 12 space probes p 31 A82-22596

The solar proton fluxes in April, 1979
p 66 A82-22597

Non-flare injection of protons into interplanetary space
p 4 A82-22601

Low-energy particles in interplanetary magnetic field near the sectorial boundary on September 26, 1977
p 4 A82-22602

SOLAR RADIATION

Simplified techniques to study components of solar radiation under haze and clouds p 78 A82-32766

Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742

SOLAR SYSTEM

Nucleosynthesis of light and by-passed isotopes in the solar system matter p 64 A82-22578

SOLAR WIND
High resolution measurements of solar flare isotopes p 22 A82-22606
Is the neon composition of our sun, planetary or solar p 76 A82-22608
11-year modulation and spectrum of cosmic rays in the interstellar space p 22 A82-22616
SOLAR WIND VELOCITY
Non-flare injection of protons into interplanetary space p 4 A82-22601
The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics p 83 A82-22603
SOLAR X-RAYS
Model for solar hard X-ray bursts p 65 A82-22581
The determination of differential X-ray spectrum of the solar flare using ionospheric data p 65 A82-22582
Solar gamma-ray experiment on Astro-A satellite p 21 A82-22583
Interplanetary particle observations associated with solar flare gamma-ray line emission p 3 A82-22584
Observations of interplanetary energetic charged particles from gamma-ray line solar flares p 65 A82-22586
Soft X-rays from the sunlit earth's atmosphere p 29 A82-37405
SOLID STATE DEVICES
A system design for a multispectral sensor using two-dimensional solid-state imaging arrays p 77 A82-31991
Solid state instrumentation concepts for earth resource observation
[AAS PAPER 82-132] p 81 A82-37812
SOMALIA
MONEX oceanographic observations along the East African coast --- global atmospheric research program p 56 N82-23908
SORGHUM
A meteorologically driven grain sorghum stress indicator model
[E82-10218] p 13 N82-23591
Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa
[E82-10221] p 13 N82-23594
SOUTH AMERICA
Study of gravity and magnetic anomalies using MAGSAT data
[E82-10194] p 35 N82-22628
Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569
Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10316] p 38 N82-24589
An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10317] p 38 N82-24590
The crustal structure and tectonics of South America
[E82-10319] p 38 N82-24592
Geotectonics of South America --- regional magnetic and gravity anomalies of South America
[E82-10320] p 38 N82-24593
SOUTH CAROLINA
Use and applicability of the vegetation component of the national site classification system --- Sumter National Forest, South Carolina
[E82-10234] p 15 N82-23607
SOUTH DAKOTA
AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1
[DE82-004152] p 45 N82-23641
Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2
[DE82-004164] p 45 N82-23642
Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota
[E82-10329] p 18 N82-24602
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1
[DE82-005533] p 47 N82-27806
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 2
[DE82-005574] p 47 N82-27807
Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota
[DE82-005540] p 48 N82-27814
SOUTHERN HEMISPHERE
Mean sea-level pressure in the Southern Hemisphere during the FGGE period --- First Global Atmospheric Research Program Global Experiment (FGGE); buoys p 55 N82-23856
SOYBEANS
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537
Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905
Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566
AgRISTARS: Foreign commodity production forecasting. The 1980 US corn and soybeans exploratory experiment
[E82-10206] p 11 N82-23579
Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588
AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment
[E82-10216] p 13 N82-23589
Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa
[E82-10221] p 13 N82-2359[illegible]
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans
[E82-10227] p 14 N82-23600
AgRISTARS. Project management report: Program review presentation to level 1, interagency coordination committee --- Brazil, Argentina, U.S. corn belt, Great Plains Corridor
[E82-10231] p 15 N82-23604
Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610
Analysis of scanner data for crop inventories
[E82-10241] p 16 N82-24519
SPACE EXPLORATION
History of the French satellite space program p 85 N82-24216
SPACE MISSIONS
ERS-1 European remote sensing satellite p 84 A82-34367
SPACE NAVIGATION
Space to the earth --- Russian book on space technology applications p 83 A82-30850
SPACE PLATFORMS
SMS/GOES data collection platform system p 75 N82-26027
SPACE TRANSPORTATION SYSTEM 2 FLIGHT
Tropospheric CO measurement experiment from the second Space Shuttle flight p 27 A82-36292
OSTA-1 Post Mission Operation Report
[NASA-TM-84191] p 84 N82-23258
SPACE-TIME FUNCTIONS
On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909
SPACEBORNE PHOTOGRAPHY
Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440
SPACEBORNE TELESCOPES
An optical objective lens for earth observations by satellites p 78 A82-32824
SPACECRAFT COMMUNICATION
Space to the earth --- Russian book on space technology applications p 83 A82-30850
SPACECRAFT INSTRUMENTS
Purpose, background of 'Intercosmos 21' mission p 81 N82-24264
SPACECRAFT LAUNCHING
LANDSAT D to test thematic mapper, inaugurate operational system
[NASA-NEWS-RELEASE-82-100] p 82 N82-26741
SPACECRAFT MODULES
LANDSAT-D thermal analysis and design support
[E82-10346] p 82 N82-26744
SPACETENNAS
Radiometer mission requirements for large space antenna systems
[NASA-TM-84478] p 81 N82-25610
SPATIAL DISTRIBUTION
The use of remote-sensing data to identify the space-time variability of the quality of natural waters p 62 A82-35138
SPATIAL FILTERING
Inversion of data from diffraction-limited multiwavelength remote sensors. II - Nonlinear dependence of observables on the geophysical parameters p 77 A82-32658
SPATIAL RESOLUTION
Spatial resolution requirements for urban studies p 29 A82-37502
SPECKLE PATTERNS
Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882
SPECTRAL BANDS
Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas
[E82-10361] p 20 N82-26759
Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas
[E82-10363] p 20 N82-26761
SPECTRAL RECONNAISSANCE
Agricultural Research Service research highlights in remote sensing for calender year 1980
[E82-10228] p 14 N82-23601
Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1
[DE82-000334] p 43 N82-23623
Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2
[DE82-000340] p 43 N82-23626
Airborne gamma-ray spectrometer and magnetometer survey. Teshekpuk quadrangle, Alaska, volume 2
[DE82-000310] p 43 N82-23627
Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2
[DE82-000315] p 43 N82-23628
Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2
[DE82-000309] p 43 N82-23629
Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2
[DE82-000308] p 43 N82-23630
Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2
[DE82-000316] p 44 N82-23631
Airborne gamma-ray spectrometer and magnetometer survey. Sagavanirktok quadrangle, Alaska, volume 2
[DE82-000311] p 44 N82-23632
Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2
[DE82-001027] p 44 N82-23633
Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1 --- uranium exploration
[DE82-005541] p 48 N82-27813
SPECTRAL REFLECTANCE
Remote sensing of the weediness of crop fields p 5 A82-29435
Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537
Relating Landsat digital count values to ground reflectance for optically thin atmospheric conditions p 66 A82-29762
Albedo and angular characteristics of the reflectance of the underlying surface and clouds --- Russian book p 33 A82-30849
Emissivity and reflectance of the model sea surface for the use of AVHRR data of NOAA satellites p 52 A82-31294
System albedo as sensed by satellites - Its definition and variability p 23 A82-32342
Remote sensing of leaf water content in the near infrared p 8 A82-32897
Quantitative relationships of near-surface spectra to Landsat radiometric data p 78 A82-32912
Influence of sky radiance distribution on the ratio technique for estimating bidirectional reflectance p 70 A82-35650
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623
Analysis of scanner data for crop inventories
[E82-10192] p 10 N82-22626
Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585
Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton
[E82-10220] p 13 N82-23593
Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco
[E82-10347] p 19 N82-26745

Association of spectral development patterns with development stages of corn
[E82-10353] p 19 N82-26751

Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

SPECTRAL SENSITIVITY

Sensitivity of Dobson total ozone estimations to wavelength band calibration uncertainties
p 27 A82-36405

Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas
[E82-10362] p 20 N82-26760

Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas
[E82-10363] p 20 N82-26761

SPECTRAL SIGNATURES

Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913

Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585

Airborne observed solar elevation and row direction effects on the near-IR/red ratio of cotton
[E82-10220] p 13 N82-23593

Linear polarization of light by two wheat canopies measured at many view angles
[E82-10229] p 14 N82-23602

Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610

Analysis of scanner data for crop inventories
[E82-10241] p 16 N82-24519

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana
[E82-10341] p 46 N82-25603

Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas
[E82-10349] p 19 N82-26747

Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

SPECTROMETERS

Breadboard gas filter correlation spectrometer for atmospheric measurement of hydrazines and nitrogen dioxide
[AD-A110688] p 82 N82-26642

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 47 N82-27805

SPECTROPHOTOMETERS

Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

Observations and analyses of the total amount of atmospheric ozone in the Beijing region and in the region of Jolmolungma Mountain in Tibet p 28 A82-36444

SPECTRORADIOMETERS

Emissivity and reflectance of the model sea surface for the use of AVHRR data of NOAA satellites
p 52 A82-31294

High spectral resolution airborne spectrometry
p 77 A82-32443

Thematic mapper - An overview of spectral band registration p 77 A82-32447

SPECTROSCOPIC ANALYSIS

Imaging spectroscopy; Proceedings of the Seminar, Los Angeles, CA, February 10, 11, 1981 p 77 A82-32440

Multispectral mapper - Imaging spectroscopy as applied to the mapping of earth resources p 77 A82-32446

SPECTRUM ANALYSIS

Spectroscopic remote sensing for geological applications p 41 A82-32442

Total ozone retrieval from satellite Meteor 28 Fourier spectrometer measurements p 28 A82-36422

Observations and analyses of the total amount of atmospheric ozone in the Beijing region and in the region of Jolmolungma Mountain in Tibet p 28 A82-36444

MAGSAT science investigations
[E82-10199] p 71 N82-23572

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10308] p 37 N82-24582

Irrigation management with remote sensing --- Navajo Indian Irrigation Project
[E82-10357] p 20 N82-26755

SPECULAR REFLECTION

A model of plant canopy polarization
[E82-10233] p 15 N82-23606

SPHERICAL HARMONICS

Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576

Improved definition of crustal magnetic anomalies for MAGSAT data
[E82-10314] p 37 N82-24587

SPIRAL GALAXIES

Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey
p 82 A82-22549

SPONGES (MATERIALS)

Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590

SPOT (FRENCH SATELLITE)

The use of the SPOT satellite in natural resource evaluation p 83 A82-31996

STATISTICAL ANALYSIS

Monitoring land-cover change by principal component analysis of multitemporal Landsat data
p 68 A82-32906

Image quality and height measurement accuracy of serial survey camera imagery from high altitudes
p 78 A82-33297

The effect of the spectral attenuation of UV radiation by aerosol on the total ozone measurements
p 27 A82-36406

A statistical approach to rainfall estimation using satellite and conventional data
[NOAA-TR-NESS-89] p 63 N82-22854

Estimates of the statistical structure of the atmospheric pressure field in summer Monex-79 area
p 57 N82-23939

STEADY STATE

Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552

STELLAR EVOLUTION

Nucleosynthesis of light and by-passed isotupes in the solar system matter p 64 A82-22578

STELLAR MAGNETIC FIELDS

Acceleration processes near massive black holes
p 3 A82-22572

STELLAR MASS ACCRETION

Acceleration of cosmic rays in accretion shocks
p 64 A82-22568

STELLAR MODELS

Pulsar models and cosmic-ray acceleration
p 21 A82-22570

STELLAR OCCULTATION

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

STELLAR RADIATION

On the stellar origin of the Ne-22 excess in cosmic rays p 21 A82-22562

On the stellar origin of low energy cosmic rays
p 21 A82-22567

STELLAR WINDS

Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

STEREOPHOTOGRAPHY

Application of 35mm color aerial photography to forest land change detection p 6 A82-29533

Analytical processing of photographs taken by paired cameras p 79 A82-34471

STEREOSCOPY

Coordination of stereo image registration and pixel classification
[AD-A111307] p 75 N82-25614

STOCHASTIC PROCESSES

Evidence for the stochastic acceleration of cosmic rays in supernova remnants p 2 A82-22564

Preliminary evidence for the influence of physiography and scale upon the autocorrelation function of remotely sensed data p 67 A82-32343

STORMS (METEOROLOGY)

The growth of snow in winter storms - An airborne observational study p 60 A82-33329

Comparison of storm-time changes of geomagnetic field at ground and at MAGSAT altitudes, part 2
[E82-10325] p 30 N82-24598

STRATIFICATION

A comparison of stratified versus regression estimators p 11 N82-23133

STRATIFIED FLOW

On the application of a model of boundary-layer flow over low hills to real terrain p 29 A82-36741

STRATOSPHERE

Airborne lidar measurements of the Soufriere eruption of 17 April 1979 p 24 A82-33657

Observation of the diurnal variation of atmospheric ozone p 26 A82-35895

Microwave measurement of stratospheric and mesospheric ozone p 28 A82-36415

The seasonal variations of ozone and temperature in the middle and the upper stratosphere
p 29 A82-36534

STRATOSPHERE RADIATION

The energy spectra of cosmic ray variations inferred from the stratospheric measurements in 1972-1979
p 5 A82-22617

Stratospheric emission data analysis
[AD-A112337] p 76 N82-26907

STREAMS

Use of aerial photography in determining land use and streamflow relationships on small developing watersheds
p 60 A82-34736

STRESS (BIOLOGY)

Remote sensing of leaf water content in the near infrared p 8 A82-32897

Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905

STRESS MEASUREMENT

Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

STRIP MINING

Application of remote sensing to state and regional problems
[E82-10288] p 30 N82-24566

STRUCTURAL BASINS

The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana
[E82-10341] p 46 N82-25603

STRUCTURAL PROPERTIES (GEOLOGY)

Regional geological, tectonic and geophysical features of Nordland, Norway p 41 A82-30304

Satellite image interpretation of the eastern Caledonian part of the Blue Road Geotraverse and its geological implications /Nordland, Vasterbotten, Scandinavia/
p 41 A82-30305

Comparing lineaments interpreted from Landsat imagery and topographic maps with reported faults in southwest Montana p 34 A82-34719

Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723

Significance of tectonics in linear feature detection and interpretation on satellite images p 42 A82-37198

Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study
[E82-10190] p 42 N82-22624

Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573

Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10153] p 45 N82-24518

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576

Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data
[E82-10303] p 36 N82-24577

Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data
[E82-10304] p 37 N82-24578

Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586

STRUCTURAL STABILITY

Nonlinear theory for elastic beams and rods and its finite element representation
[WTHD-143] p 73 N82-24517

SUGAR BEETS

Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa [E82-10221] p 13 N82-23594

SUGAR CANE

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula [E82-10299] p 17 N82-24575

SULFUR DIOXIDES

Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary [DE82-900580] p 31 N82-27802

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data [DE82-900581] p 31 N82-27803

SUMMER

Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX) p 56 N82-23900

Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

SUPERNOVA REMNANTS

Evidence for the stochastic acceleration of cosmic rays in supernova remnants p 2 A82-22564

SUPERNOVAE

The galactic origin of cosmic rays. I [CONF-810711-1] p 2 A82-22565

Nucleosynthesis of light and by-passed isotopes in the solar system matter p 64 A82-22578

SURFACE PROPERTIES

Experimental assessment of improved spatial resolution LANDSAT data [AD-A110538] p 75 N82-26765

SURFACE ROUGHNESS

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas [E82-10349] p 19 N82-26747

Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas [E82-10351] p 19 N82-26749

Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas [E82-10362] p 20 N82-26760

SURFACE TEMPERATURE

Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905

Infrared sensing of sea surface temperature from space p 53 A82-32902

Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905

Measuring sea surface temperature from satellites - A ground truth approach p 54 A82-32917

Satellite observations of sea surface temperature around the British Isles p 54 A82-33717

Evaluation of the accuracy of water-surface temperature measurement by means of airborne infrared radiometers p 62 A82-35136

Determination of winter temperature patterns, fronts, and surface currents in the Yellow Sea and East China Sea from satellite imagery p 55 A82-37195

The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence [E82-10207] p 12 N82-23580

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions [E82-10225] p 14 N82-23598

Delineation of soil temperature regimes from HCMM data [E82-10298] p 17 N82-24574

Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula [E82-10299] p 17 N82-24575

Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain [E82-10300] p 17 N82-24576

A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri [E82-10311] p 17 N82-24585

High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979 [E82-10324] p 57 N82-24597

SURFACE WATER

Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896

SYNCHRONOUS METEOROLOGICAL SATELLITE

SMS/GOES data collection platform system p 75 N82-26027

SYNCHRONOUS SATELLITES

Observed magnetic substorm signatures at synchronous altitude p 26 A82-35534

SYNCHROTRON RADIATION

Derivation of the distribution of synchrotron emissivity in the Galaxy from the 408 MHz all-sky survey p 82 A82-22549

Steady-state cosmic ray electron spectrum under diffusion, convection, adiabatic deceleration and synchrotron losses p 1 A82-22552

SYNTHETIC APERTURE RADAR

A simulation study of soil moisture estimation by a space SAR p 60 A82-29333

The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623

The recognition of extended targets - SAR images for level and hilly terrain p 33 A82-31994

The estimation of wave height from digitally processed SAR imagery p 67 A82-32347

On the synthetic aperture radar imaging of ocean surface waves p 53 A82-32881

Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882

Interpretation of vegetative cover in wetlands using four-channel SAR imagery p 9 A82-34706

Comparisons of land cover classifications from selected remote sensing systems p 80 A82-34746

Microwave sensing from space [AAS PAPER 82-127] p 80 A82-37809

Evaluation of the soil moisture prediction accuracy of a space radar using simulation techniques --- Kansas [E82-10351] p 19 N82-26749

SYSTEMS

Meteorological and aircraft data for CUE 2 1973 [PB82-149246] p 59 N82-26949

SYSTEMS ENGINEERING

A system design for a multispectral sensor using two-dimensional solid-state imaging arrays p 77 A82-31991

Design guidelines for satellite image data distribution systems p 70 A82-37048

T

TARGET RECOGNITION

The recognition of extended targets - SAR images for level and hilly terrain p 33 A82-31994

TECHNOLOGY ASSESSMENT

Seasat measurement system evaluation - Achievements and limitations p 49 A82-29601

Impacts of remote sensing on U.S. geography p 24 A82-32899

TECHNOLOGY TRANSFER

Civil land remote sensing system [GPO-87-070] p 84 N82-22630

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions [E82-10181] p 85 N82-23568

Forest Resource Information System. Phase 3: System transfer report [E82-10344] p 18 N82-25606

TECTONICS

Significance of tectonics in linear feature detection and interpretation on satellite images p 42 A82-37198

Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832

Geodetic monitoring of tectonic deformation: Toward a strategy [NASA-CR-168784] p 35 N82-22846

Characterization of the structure and tectonic of South America [E82-10196] p 42 N82-23569

Bathymetric and tectonics of Indian Ocean using MAGSAT data [E82-10204] p 36 N82-23577

An equivalent layer magnetization model for the United States derived from MAGSAT data [E82-10297] p 36 N82-24573

Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data [E82-10303] p 36 N82-24577

Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data [E82-10304] p 37 N82-24578

The crustal structure and tectonics of South America [E82-10319] p 38 N82-24592

Geotectonics of South America --- regional magnetic and gravity anomalies of South America [E82-10320] p 38 N82-24593

Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915

TELEMETRY

Purpose, background of 'Intercosmos-21' mission p 81 N82-24264

TEMPERATURE DISTRIBUTION

Surface temperature determination from an amalgamation of GOES and TIROS-N radiance measurements p 66 A82-28905

Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905

Rapid oceanographic data gathering: Some problems in using remote sensing to determine the horizontal and vertical thermal distributions in the Northeast Pacific Ocean [AD-A111005] p 58 N82-26945

TEMPERATURE EFFECTS

A meteorologically driven grain sorghum stress indicator model [E82-10218] p 13 N82-23591

LANDSAT-D thermal analysis and design support [E82-10346] p 82 N82-26744

TEMPERATURE MEASUREMENT

View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914

Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery p 68 A82-32916

Measuring sea surface temperature from satellites - A ground truth approach p 54 A82-32917

Evaluation of the accuracy of water-surface temperature measurement by means of airborne infrared radiometers p 62 A82-35136

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements [E82-10313] p 82 N82-26743

TEMPERATURE PROFILES

Satellite radiation measurements for the retrieval of the vertical temperature profiles p 70 A82-36935

TEMPORAL DISTRIBUTION

The use of remote-sensing data to identify the space-time variability of the quality of natural waters p 62 A82-35138

TERRADYNAMICS

Origin and scale of coordinate systems in satellite geodesy p 34 A82-32099

TERRAIN ANALYSIS

The recognition of extended targets - SAR images for level and hilly terrain p 33 A82-31994

Terrain analysis from Landsat using a color TV enhancement system p 68 A82-32911

Bathymetric imaging p 69 A82-34720

Terrain classification by Fourier analysis - Accuracy and economy p 69 A82-34723

Remote sensing of thermal subsurface terrain properties p 80 A82-34727

Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643

Topographic slope correction for analysis of thermal infrared images [E82-10214] p 36 N82-23587

Field measurements in support of dispersion modeling in complex terrain (1980) [PB82-148644] p 39 N82-27882

TERRESTRIAL RADIATION

A study of the earth's radiation budget using a general circulation model p 52 A82-30666

TEXAS

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions [E82-10225] p 14 N82-23598

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1 [DE82-005554] p 47 N82-27808

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas [DE82-005560] p 48 N82-27809

TEXTURES
The use of soil texture and field capacity to normalize microwave soil moisture measurements: Some problems p 20 N82-26762

THEMATIC MAPPING
Preliminary evidence for the influence of physiography and scale upon the autocorrelation function of remotely sensed data p 67 A82-32343
Thematic mapper - An overview of spectral band registration p 77 A82-32447
Multispectral mapper - Imaging spectroscopy as applied to the mapping of earth resources p 77 A82-32448
RAMS-1, a Resource Analysis and Mapping System p 69 A82-34726
Improved land use classification from Landsat and Seasat satellite imagery registered to a common map base p 25 A82-34743
Water-balance differentiation of natural complexes on the basis of satellite photographs p 61 A82-35129
Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands p 10 A82-37503
Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana
[OGMR-56] p 42 N82-22636
Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565
Identifying environmental features for land management decisions --- Utah
[E82-10289] p 30 N82-24567
A legislator's guide to LANDSAT
[E82-10290] p 85 N82-24568
The influence of autocorrelation in signature extraction: An example from a geobotanical investigation of Cotter Basin, Montana
[E82-10341] p 46 N82-25603
LANDSAT D to test thematic mapper, inaugurate operational system
[NASA-NEWS-RELEASE-82-100] p 82 N82-26741
Relating thematic mapper bands TM3, TM4, and TM5 to agronomic variables for corn, cotton, sugarbeet, soybean, sorghum, sunflower and tobacco
[E82-10347] p 19 N82-26745
Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas
[DE82-005560] p 48 N82-27809

THERMAL CONDUCTIVITY
Remote sensing of thermal subsurface terrain properties p 80 A82-34727

THERMAL MAPPING
Thermography - A remote sensing method with many perspectives p 76 A82-29922
Geographic location of individual pixels --- for thermal infrared digital data processing p 68 A82-32900
View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914
Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery p 68 A82-32916
The use of Landsat-3 thermal data to help differentiate land covers p 25 A82-34218
An optical data link for airborne scanning system p 80 A82-34737
Longwave infrared observation of urban landscapes p 25 A82-34744
Application of satellite magnetic anomaly data to Curie isotherm mapping p 70 A82-35824
Landsat D to yield more precise data p 70 A82-37200
Spatial thermal radiometry contribution to the Massif Armoricain and the Massif Central France litho-structural study
[E82-10190] p 42 N82-22624
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada
[E82-10191] p 62 N82-22625
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains
[E82-10205] p 11 N82-23578
Registration of Heat Capacity Mapping Mission day and night images
[E82-10210] p 72 N82-23583
Topographic slope correction for analysis of thermal infrared images
[E82-10214] p 36 N82-23587
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10153] p 45 N82-24518
Application of HCMM data to regional geologic analysis for mineral and energy resource evaluation
[E82-10243] p 45 N82-24521
Multilevel measurements of surface temperature over undulating terrain planted to barley
[E82-10245] p 16 N82-24523
Delineation of soil temperature regimes from HCMM data
[E82-10298] p 17 N82-24574
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida --- Everglades agricultural area and the west north central peninsula
[E82-10299] p 17 N82-24575
Thermal mapping, geothermal source location, natural effluents and plant stress in the Mediterranean coast of Spain
[E82-10300] p 17 N82-24576
A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri
[E82-10311] p 17 N82-24585
Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco
[E82-10315] p 74 N82-24588
High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979
[E82-10324] p 57 N82-24597
HCMM hydrological analysis in Utah
[E82-10328] p 63 N82-24601
Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota
[E82-10329] p 18 N82-24602
Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748
An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon
[E82-10352] p 47 N82-26750
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 47 N82-27808

THERMAL RADIATION
Cosmic ray composition from acceleration of thermal matter p 64 A82-22558
Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905
Remote sensing of thermal subsurface terrain properties p 80 A82-34727

THORIUM
Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634
Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 44 N82-23638
Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2
[DE82-000313] p 47 N82-25625
Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1
[DE82-005533] p 47 N82-27806

TIDAL FLATS
Remote sensing in Scotland using data received from satellites - A study of the Tay Estuary region using Landsat multispectral scanning imagery p 62 A82-37501

TIDES
Tidal and geodetic observations for the Seasat altimeter calibration experiment p 49 A82-29604

TIMBER INVENTORY
Optical bar panoramic photography for planning timber salvage in drought-stressed forests p 7 A82-32705
Landsat detection of hardwood forest clearcuts p 8 A82-32708
Remote sensing - A potential aid in the preparation of an urban tree inventory p 9 A82-34732
Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri.
[E82-10186] p 84 N82-22620
AgRISTARS: Renewable resources inventory. Land information support system implementation plan and schedule --- San Juan National Forest pilot test
[E82-10224] p 14 N82-23597
Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

TIMBER VIGOR
Remote sensing of Douglas-fir trees newly infested by bark beetles p 6 A82-29536
Panoramic aerial photography in forest pest management p 7 A82-32701
Estimating bark beetle-killed lodgepole pine with high altitude panoramic photography p 7 A82-32703
Evaluation of spruce-fir forests using small-format photographs p 8 A82-32707

TIME DEPENDENCE
Computer simulation of the time dependence of the photon energy spectra produced in proton and electron bremstrahlung p 3 A82-22587

TIME LAG
Seasat altimeter timing bias estimation p 50 A82-29609
Evaluation of the Seasat altimeter time tag bias p 50 A82-29610
Geodetic monitoring of tectonic information. Toward a strategy p 35 N82-22832

TIROS N SERIES SATELLITES
Digital and visual evaluation of GOES and TIROS/NOAA image data for cover type effects on snowfield observations p 60 A82-34735

TOBACCO
Normal crop calendars. Volume 3: The corn and soybean states of Illinois, Indiana, and Iowa
[E82-10221] p 13 N82-23594

TOMOGRAPHY
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry --- corn and soybeans
[E82-10227] p 14 N82-23600

TOPOGRAPHY
Comparison data for Seasat altimetry in the western North Atlantic p 50 A82-29611
The simultaneous employment of geodetic measurements for block adjustments using the method of independent models p 34 A82-33295
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets --- Ozard Plateau and St. Francois Mountains
[E82-10205] p 11 N82-23578
Topographic slope correction for analysis of thermal infrared images
[E82-10214] p 36 N82-23587

TORNADOES
Remote sensing of tornadic storms from geosynchronous satellite infrared digital data p 23 A82-32348

TRACE CONTAMINANTS
Dobson spectrophotometer calibrations, possible errors in ozone absorption coefficients, and errors due to interfering pollutant gases p 28 A82-36431

TRANSFORMATIONS (MATHEMATICS)
An information-theoric spatial transform p 69 A82-34717

TRANSMITTANCE
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623

TRAVELING IONOSPHERIC DISTURBANCES
Characteristics of field-aligned E-region irregularities over Iioka /36 N/, Japan. I p 26 A82-36268

TREES (MATHEMATICS)
Dependent feature trees for density approximation I - Optimal construction and classification results p 67 A82-32344

TREES (PLANTS)
Remote sensing - A potential aid in the preparation of an urban tree inventory p 9 A82-34732
Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri.
[E82-10186] p 84 N82-22620

TRIANGULATION
Present status of on-line analytical triangulation p 69 A82-34940

TROPICAL METEOROLOGY
Interannual variations of outgoing IR associated with tropical circulation changes during 1974-1978 p 54 A82-36341

TROPICAL REGIONS

The impact of meteorological satellites on the First GARP Global Experiment (FGGE) --- First Global Atmospheric Research Program Global Experiment (FGGE) p 55 N82-23852

TROPOSPHERE

Fine particles in the Soufriere eruption plume p 24 A82-33659

Aircraft measurements of NO/x/ in the lower troposphere above the coast of Japan p 26 A82-36247

Tropospheric CO measurement experiment from the second Space Shuttle flight p 27 A82-36292

Ammonia and the NOx budget of the troposphere p 27 A82-36293

TROPOSPHERIC SCATTERING

Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442

TUNDRA

Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913

TURBIDITY

Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896

Nearshore current pattern off south Texas - An interpretation from aerial photographs p 53 A82-32903

TYPE 2 BURSTS

The relation of type II radio bursts to solar energetic particles observed at earth p 3 A82-22591

U

U.S.S.R. SPACE PROGRAM

Remote sensing of the earth's resources - The Soviet experience p 84 A82-33555

ULTRAVIOLET ABSORPTION

The effect of the spectral attenuation of UV radiation by aerosol on the total ozone measurements p 27 A82-36406

ULTRAVIOLET SPECTROMETERS

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

ULTRAVIOLET SPECTROPHOTOMETERS

Sensitivity of Dobson total ozone estimations to wavelength band calibration uncertainties p 27 A82-36405

Dobson spectrophotometer calibrations, possible errors in ozone absorption coefficients, and errors due to interfering pollutant gases p 28 A82-36431

OSO-8 lower mesospheric ozone number density profiles p 28 A82-36472

UNDERWATER OPTICS

Bias correction procedures for airborne laser hydrography [PB82-130089] p 63 N82-22644

UNITED KINGDOM

Satellite observations of sea surface temperature around the British Isles p 54 A82-33717

The METEOSAT Data Collection System and its application p 75 N82-26037

UNITED STATES OF AMERICA

MAGSAT and aeromagnetic data in the North American continent [E82-10193] p 71 N82-22627

AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment [E82-10126] p 11 N82-23565

An equivalent layer magnetization model for the United States derived from MAGSAT data [E82-10297] p 36 N82-24573

Magnetic and gravity anomalies in the Americas [E82-10312] p 37 N82-24586

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent [E82-10321] p 46 N82-24594

Use of MAGSAT anomaly data for crustal structure and mineral resources in the US Midcontinent [E82-10323] p 46 N82-24596

UNIVERSITY PROGRAM

LANDSAT technology transfer to the private and public sectors through community colleges and other locally available institutions [E82-10181] p 85 N82-23568

UPWELLING WATER

Meteorological and aircraft data for CUE 2 1973 [PB82-149246] p 59 N82-26949

URANIUM

Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1 [DE82-000334] p 43 N82-23623

Airborne gamma-ray spectrometer and magnetometer survey. Wainwright quadrangle, Alaska, volume 2 [DE82-000341] p 43 N82-23624

Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1 [DE82-001029] p 43 N82-23625

Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2 [DE82-000340] p 43 N82-23626

Airborne gamma-ray spectrometer and magnetometer survey. Teshekpuk quadrangle, Alaska, volume 2 [DE82-000310] p 43 N82-23627

Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2 [DE82-000315] p 43 N82-23628

Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2 [DE82-000309] p 43 N82-23629

Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2 [DE82-000308] p 43 N82-23630

Airborne gamma-ray spectrometer and magnetometer survey. Utukik River quadrangle, Alaska, volume 2 [DE82-000316] p 44 N82-23631

Airborne gamma-ray spectrometer and magnetometer survey. Sagavanirktok quadrangle, Alaska, volume 2 [DE82-000311] p 44 N82-23632

Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2 [DE82-001027] p 44 N82-23633

Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2 [DE82-001025] p 44 N82-23634

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1 [DE82-004161] p 44 N82-23635

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2 [DE82-004168] p 44 N82-23636

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1 [DE82-001032] p 44 N82-23637

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2 [DE82-001026] p 44 N82-23638

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1 [DE82-004159] p 44 N82-23639

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2 [DE82-004165] p 45 N82-23640

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1 [DE82-004152] p 45 N82-23641

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2 [DE82-004164] p 45 N82-23642

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1 [DE82-004151] p 45 N82-23643

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2 [DE82-004166] p 45 N82-23644

Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A [DE81-027158] p 46 N82-25620

Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C [DE81-027161] p 46 N82-25621

Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D [DE81-027156] p 46 N82-25622

Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranagle, Alaska, volume 2 [DE82-000342] p 46 N82-25623

Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2 [DE82-000313] p 47 N82-25625

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2 [DE82-005570] p 47 N82-27805

Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1 [DE82-005533] p 47 N82-27806

Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 2 [DE82-005574] p 47 N82-27807

Airborne gamma-ray spectrometer and magnetometer survey: Susanville quadrangle, California, volume 1 [DE82-005538] p 48 N82-27811

Airborne gamma-ray spectrometer and magnetometer survey: Roseburg quadrangle, Oregon, volume 2 [DE82-005568] p 48 N82-27812

Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1 --- uranium exploration [DE82-005541] p 48 N82-27813

URBAN RESEARCH

Spatial resolution requirements for urban studies p 29 A82-37502

A legislator's guide to LANDSAT [E82-10290] p 85 N82-24568

USER MANUALS (COMPUTER PROGRAMS)

Description of the FORTRAN implementation of the spring small grains planting date distribution model [E82-10235] p 15 N82-23608

UTAH

Identifying environmental features for land management decisions --- Utah [E82-10289] p 30 N82-24567

HCMM hydrological analysis in Utah [E82-10328] p 63 N82-24601

Inventory of wetlands and agricultural land cover in the upper Sevier River Basin, Utah [E82-10345] p 18 N82-25607

Mapping of wildlife habitat in Farmington Bay, Utah [E82-10354] p 19 N82-26752

Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah [E82-10355] p 19 N82-26753

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming [E82-10356] p 20 N82-26754

V

VARIABILITY

Determination of the optimal level for combining area and yield estimates [E82-10215] p 12 N82-23588

On the space-time variability of ocean surface mixed layer characteristics of central and eastern Arabian sea during MONSOON-77 --- global atmospheric research program p 56 N82-23909

VEGETATION

Color aerial photography in the plant sciences and related fields; Proceedings of the Eighth Biennial Workshop, Luray, VA, April 21-23, 1981 p 5 A82-29526

Estimating rangeland cover proportions with large-scale color-infrared aerial photographs p 6 A82-29534

Mapping riparian vegetation in Southeastern Oregon using digitized large scale color infra-red aerial photography p 6 A82-29535

Application of scanning microdensitometer data in selected plant science case studies p 7 A82-29539

Effects of vegetation canopy structure on remotely sensed canopy temperatures --- inferring plant water stress and yield p 8 A82-32905

Interpretation of vegetative cover in wetlands using four-channel SAR imagery p 9 A82-34706

Use of Landsat multispectral scanner data in vegetation mapping of a forested area p 9 A82-34731

Remote sensing of salt marsh vegetation in the first four proposed Thematic Mapper bands p 10 A82-37503

Use and applicability of the vegetation component of the national site classification system --- Sumter National Forest, South Carolina [E82-10234] p 15 N82-23607

AgRISTARS: Agriculture and resources inventory surveys through aerospace remote sensing [E82-10236] p 15 N82-23609

A method for inferring available surface moisture using remote surface temperature measurements: An assessment --- Kansas and St. Louis, Missouri [E82-10311] p 17 N82-24585

Measurement of soil moisture trends with airborne scatterometers --- Guymon, Oklahoma and Dalhart, Texas [E82-10361] p 20 N82-26759

Multifrequency remote sensing of soil moisture --- Guymon, Oklahoma and Dalhart, Texas [E82-10362] p 20 N82-26760

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary [DE82-900580] p 31 N82-27802

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data [DE82-900581] p 31 N82-27803

VEGETATION GROWTH

Riparian vegetation mapping in Northeastern California using high altitude color infrared aerial photography p 5 A82-29528

Landsat digital analysis of the initial recovery of burned tundra at Kokolik River, Alaska p 8 A82-32913

Multispectral determination of soil moisture-2 --- Guymon, Oklahoma and Dalhart, Texas [E82-10349] p 19 N82-26747

Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms --- Guyton, Oklahoma and Dalhart, Texas [E82-10363] p 20 N82-26761

VENERA SATELLITES

Comparison of solar proton activity in 1967 and 1969 with that in 1978 and 1979 as measured onboard Venera 4, 6, 11, 12 space probes p 31 A82-22596

VENERA 11 SATELLITE

The solar proton fluxes in April, 1979 p 66 A82-22597

VERTICAL DISTRIBUTION

Aircraft measurements of NO/x/ in the lower troposphere above the coast of Japan p 26 A82-36247

Ammonia and the NOx budget of the troposphere p 27 A82-36293

VERY LONG BASE INTERFEROMETRY

Work related to the Blue Road Geotraverse at the Finnish Geodetic Institute p 32 A82-30306

The definition of the terrestrial coordinate frame by long baseline interferometry p 33 A82-32084

Some considerations in the use of very-long-baseline-interferometry to establish reference coordinate systems for geodynamics p 34 A82-32096

VIEW EFFECTS

Effect of atmospheric conditions on remote sensing of vegetation parameters p 24 A82-32901

View angle effects in the radiometric measurement of plant canopy temperatures p 8 A82-32914

VISUAL AIDS

Interactive initialization of heat flux parameters for numerical models using satellite temperature measurements [E82-10313] p 82 N82-26743

VISUAL OBSERVATION

Detection of regional air pollution episodes utilizing satellite digital data in the visual range p 23 A82-31990

VOLATILITY

On volatility, first ionization potential, and s- and r-processes --- for Galactic cosmic ray sources p 2 A82-22560

VOLCANOES

Soufriere Volcano, St. Vincent - Observations of its 1979 eruption from the ground, aircraft, and satellites p 24 A82-33652

Crustal structures under the active volcanic areas of central and eastern Mediterranean (M-44) [E82-10096] p 35 N82-23563

An investigation into the utilization of HCMM thermal data for the discrimination of volcanic and Eolian geological units --- Newberry Volcano, Oregon [E82-10352] p 47 N82-26750

VOLCANOLOGY

Detection of volcanic smoke and ash-fall area at volcano Aso, from Landsat MSS data p 23 A82-31295

Geostationary satellite observations of the April 1979 Soufriere eruptions p 24 A82-33654

Meteorological analysis of the eruption of Soufriere in April 1979 p 24 A82-33655

Skirt clouds associated with the Soufriere eruption of 17 April 1979 p 24 A82-33656

Airborne lidar measurements of the Soufriere eruption of 17 April 1979 p 24 A82-33657

Fine particles in the Soufriere eruption plume p 24 A82-33659

Overseas Geology And Mineral Resources number 56: A geological interpretation of LANDSAT imagery and air photography of Botswana [OGMR-56] p 42 N82-22636

Seismic and geodetic studies of the Imperial Valley, California [DE82-001686] p 39 N82-26915

W

WATER BALANCE

Water-balance differentiation of natural complexes on the basis of satellite photographs p 61 A82-35129

The possibility of using remote-sensing methods to study the hydrology of elementary watersheds p 61 A82-35130

WATER CIRCULATION

Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896

Sea-Ice Mission Requirements for the US FIREX and Canada RADARSAT programs [NASA-CR-168984] p 57 N82-25609

WATER COLOR

Analysis of ocean color scanner data from the Superflux III Experiment [NASA-TM-83290] p 55 N82-23614

WATER DEPTH

Bias correction procedures for airborne laser hydrography [PB82-130089] p 63 N82-22644

Bathymetric and tectonics of Indian Ocean using MAGSAT data [E82-10204] p 36 N82-23577

Analyzing the Broken Ridge area of the Indian Ocean using magnetic and gravity anomaly maps and geoid undulation and bathymetry data [E82-10303] p 36 N82-24577

Investigating tectonic and bathymetric features of the Indian Ocean using MAGSAT magnetic anomaly data [E82-10304] p 37 N82-24578

WATER FLOW

The use of satellite photographs to study snow-cover dynamics and to determine the average water discharge of the Amudarya during a vegetation period p 61 A82-35132

WATER POLLUTION

Characteristics of 13.9 GHz radar scattering from oil films on the sea surface p 54 A82-33438

A quantitative multispectral analysis system for aerial photographs applied to coastal planning p 55 A82-37505

WATER QUALITY

The use of remote-sensing data to identify the space-time variability of the quality of natural waters p 62 A82-35138

Use of NOAA/AVHRR visible and near-infrared data for land remote sensing [NASA-TM-84186] p 81 N82-22643

HCMM hydrological analysis in Utah [E82-10328] p 63 N82-24601

WATER RESOURCES

A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910

Use of aerial photography in determining land use and streamflow relationships on small developing watersheds p 60 A82-34736

The possibility of using remote-sensing methods to study the hydrology of elementary watersheds p 61 A82-35130

The seasonal snow-line within the Fergana basin and the possibility of using it for hydrological forecasting p 61 A82-35131

The use of remote-sensing data to identify the space-time variability of the quality of natural waters p 62 A82-35138

Ten-Ecosystem Study --- Grand and Weld Counties, Colorado; Warren County, Pennsylvania; St. Louis County, Minnesota; Sandoval County, New Mexico; Kershaw County, South Carolina; Fort Yukon, Alaska; Grays Harbor County, Washington; and Washington County, Missouri. [E82-10186] p 84 N82-22620

WATER RUNOFF

A comparative study of microwave radiometer observations over snowfields with radiative transfer model calculations --- for water runoff estimation p 60 A82-32910

Automated classification of runoff coefficients from Landsat multispectral data p 60 A82-34734

The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology --- Salt Verde Watershed and the southern Sierra Nevada [E82-10191] p 62 N82-22625

WATER TABLES

Evaluation of HCMM data for assessing soil moisture and water table depth --- South Dakota [E82-10329] p 18 N82-24602

WATER TEMPERATURE

Evaluation of the accuracy of water-surface temperature measurement by means of airborne infrared radiometers p 62 A82-35136

WATER VAPOR

Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196

WATER WAVES

The Seasat altimeter data and its accuracy assessment p 49 A82-29602

An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607

Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608

Waveheight and wind speed measurements from the Seasat radar altimeter p 50 A82-29612

Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624

The estimation of wave height from digitally processed SAR imagery p 67 A82-32347

On the synthetic aperture radar imaging of ocean surface waves p 53 A82-32881

Ocean wave height measurement with SEASAT SAR using speckle diversity p 53 A82-32882

Pulse-to-pulse correlation in satellite radar altimeters --- for ocean wave height measurement p 55 A82-37390

WATERSHEDS

Automated classification of runoff coefficients from Landsat multispectral data p 60 A82-34734

Use of aerial photography in determining land use and streamflow relationships on small developing watersheds p 60 A82-34736

Dynamic study of the upper Sao Francisco river and Tres Marias reservoir using MSS/LANDSAT images --- BRazil [E82-10291] p 63 N82-24569

WAVE ATTENUATION

Possible evidence for attenuation of an MHD shock by a magnetic neutral sheet in the solar corona p 3 A82-22589

WAVE FRONTS

Satellite observations in FRONTS 80 [AD-A111080] p 58 N82-26766

WAVEFORMS

Sea-state-related altitude errors in the Seasat radar altimeter p 50 A82-29608

WEATHER FORECASTING

Impact of additional summer MONEX wind data on the prediction of monsoon depressions during June - August 1979 with two versions of primitive equation (PE) barotropic model --- Monsoon Experiment (MONEX) p 56 N82-23900

Some empirical rules for forecasting fog and status over northern Florida, southern Georgia and adjacent coastal waters [PB82-154006] p 59 N82-27949

WEST GERMANY

Multidisciplinary investigations on HCMM data over middle Europe and Marocco --- southern Germany and Marrakesh, Morocco [E82-10315] p 74 N82-24588

WEST INDIES

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America [E82-10316] p 38 N82-24589

WETLANDS

Interpretation of vegetative cover in wetlands using four-channel SAR imagery p 9 A82-34706

Application of remote sensing to state and regional problems [E82-10288] p 30 N82-24566

Identifying environmental features for land management decisions --- Utah [E82-10289] p 30 N82-24567

Inventory of wetlands and agricultural land cover in the upper Sevier River Basin, Utah [E82-10345] p 18 N82-25607

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming [E82-10356] p 20 N82-26754

WHEAT

Spectral scanning of experimental plots of SO2-affected winter wheat and soybeans for mission planning p 6 A82-29537

AgRISTARS: Foreign commodity production forecasting. The 1980 US/Canada wheat and barley exploratory experiment [E82-10126] p 11 N82-23565

Evaluation of the Doraiswamy-Thompson winter wheat crop calendar model incorporating a modified spring restart sequence [E82-10207] p 12 N82-23580

AgRISTARS: Supporting research. Spring small grains planting date distribution model [E82-10208] p 12 N82-23581

Selection of the Australian indicator region [E82-10222] p 13 N82-23595

Linear polarization of light by two wheat canopies measured at many view angles [E82-10229] p 14 N82-23602

A model of plant canopy polarization [E82-10233] p 15 N82-23606

Description of the FORTRAN implementation of the spring small grains planting date distribution model [E82-10235] p 15 N82-23608

WILDLIFE

Inventory of wildlife habitat from color infrared aerial photography for Cobb Island, Virginia p 6 A82-29529

A computerized spatial analysis system for assessing wildlife habitat from vegetation maps p 9 A82-34716

Mapping of wildlife habitat in Farmington Bay, Utah [E82-10354] p 19 N82-26752

WIND DIRECTION

Some empirical rules for forecasting fog and status over northern Florida, southern Georgia and adjacent coastal waters
[PB82-154006] p 59 N82-27949

WIND MEASUREMENT

The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616

The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617

Surface wind analyses for Seasat p 51 A82-29619

Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624

SEASAT: A satellite scatterometer illumination times of selected in situ sites
[NASA-TM-83280] p 81 N82-22865

WIND VARIATIONS

Representativeness of cloud motion winds deduced from GOES Indian Ocean satellite imagery for the description of the Indian summer monsoon --- superpressure balloons for the study of the Indian summer monsoon (BALSAMINE) p 55 N82-23879

Estimates of sea surface stress for summer MONEX from cloud motions --- global atmospheric research program p 56 N82-23910

WIND VELOCITY

On the application of a model of boundary-layer flow over low hills to real terrain p 29 A82-36741

The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169083] p 57 N82-26525

WIND VELOCITY MEASUREMENT

The Seasat altimeter data and its accuracy assessment p 49 A82-29602

Waveheight and wind speed measurements from the Seasat radar altimeter p 50 A82-29612

Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621

Description of Seasat radiometer status and results p 52 A82-29622

WINDOWS (INTERVALS)

Defining the temporal window for monitoring forest canopy defoliation using Landsat p 9 A82-34730

WINTER

The growth of snow in winter storms - An airborne observational study p 60 A82-33329

Determination of winter temperature patterns, fronts, and surface currents in the Yellow Sea and East China Sea from satellite imagery p 55 A82-37195

The onset of the Australian Northwest monsoon during winter MONEX: Broadscale flow revealed by an objective analysis scheme p 56 N82-23912

Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

Ice distribution and winter surface circulation patterns, Kachemak Bay, Alaska
[AD-A110806] p 58 N82-26764

WOLF-RAYET STARS

On the stellar origin of the Ne-22 excess in cosmic rays p 21 A82-22562

WYOMING

Ground support data from July 10 to July 29, 1978, for HCMM thermal satellite data of the Powder River Basin, Wyoming
[E82-10211] p 72 N82-23584

Irrigated acreage in the Bear River Basin as of the 1975 growing season --- Idaho, Utah, and Wyoming
[E82-10356] p 20 N82-26754

X

X RAY SOURCES

Consequences of an inverse Compton emission model for extragalactic X-ray sources p 83 A82-22553

X RAY SPECTRA

The determination of differential X-ray spectrum of the solar flare using ionospheric data p 65 A82-22582

Y

YIELD

AgRISTARS: Supporting research Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581

Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588

AgRISTARS. Preliminary technical results review of FY81 experiments, volume 2: Fiscal year 1981/1982 'corn and soybeans pilot' experiment
[E82-10216] p 13 N82-23589

Association of spectral development patterns with development stages of corn
[E82-10353] p 19 N82-26751

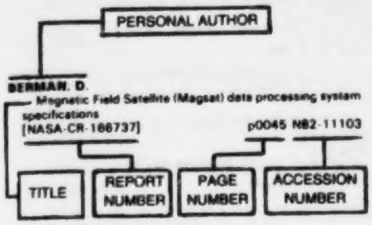
Z

ZERO POINT ENERGY

Astrophysical scenarios for critically evaluating a zero-point field acceleration mechanism
p 64 A82-22575

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title, e.g., p0045 N82-11103. Under any one author's name the accession numbers are arranged in sequence with the AIAA accession numbers appearing first

A

ADAMS, J. H., JR.
Calculated isotopic source composition and tests for origin and propagation of cosmic rays with mass numbers less than or equal to 62 p 83 A82-22554

ADRIEN, P.-M.
The use of the SPOT satellite in natural resource evaluation p 83 A82-31996

AGARWAL, B. N. P.
Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

AGARWAL, P. K.
Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

AGUI, T.
Description of gray level picture using a collection of density contour lines p 66 A82 29409

AIKEN, C. L. V.
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 47 N82-27808
Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas
[DE82-005560] p 48 N82-27809

AIKIN, A. C.
Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

ALIMUKHAMEDOV, M. A.
The use of space photographs in the mapping of glaciers and water bodies p 62 A82-37174

ALKEZWEENY, A. J.
Comparison of ozone in polluted and clean air masses over Lake Michigan p 29 A82-36477

ALLEN, L. H., JR.
Use of thermal inertia determined by HCMM to predict nocturnal cold prone areas in Florida
[E82-10299] p 17 N82-24575

ALLISON, L. J.
Snowpack monitoring in North America and Eurasia using passive microwave satellite data
p 78 A82-32915

ALLISON, R. A.
Panoramic aerial photography in forest pest management p 7 A82-32701

ALVO, P.
Aircraft monitoring of surface carbon dioxide exchange p 23 A82-30293

ALZOFON, F. E.
Remote sensing of thermal subsurface terrain properties p 80 A82-34727

ANDERSON, J. E.
Analysis of thematic mapper simulator data acquired during winter season over Pearl River, Mississippi, test site
[E82-10287] p 17 N82-24565

ANDERSON, K. D.
Inference of refractivity profiles by satellite-to-ground RF measurements p 78 A82-33442

ANDREWS, J. C.
High resolution satellite observations of mesoscale oceanography in the Tasman Sea, 1978 - 1979
[E82-10324] p 57 N82-24597

AOKI, T.
Estimation of the precipitable water from the IR channel of the geostationary satellite p 55 A82-37196

ARONOFF, S.
Detection of environmental disturbance using color aerial photography and thermal infrared imagery
p 22 A82-29327

ARORA, B. R.
MAGSAT for geomagnetic studies over Indian region
[E82-10202] p 72 N82-23575
MAGSAT for geomagnetic studies over Indian region
[E82-10296] p 73 N82-24572

ARTLEY, J. A.
AgRISTARS: Supporting research. Spring small grains planting date distribution model
[E82-10208] p 12 N82-23581
Application of thermal model for pan evaporation to the hydrology of a defined medium, the sponge
[E82-10217] p 13 N82-23590
Description of the FORTRAN implementation of the spring small grains planting date distribution model
[E82-10235] p 15 N82-23608

ARUR, M. G.
Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

ARVIDSON, R. E.
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573
Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10205] p 11 N82-23578
Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

ASKARI, F.
Automated classification of runoff coefficients from Landsat multispectral data p 60 A82-34734

AUDOUZE, J.
Origin of galactic cosmic rays from Ne isotopic composition p 2 A82-22563

AUGUSTSSON, T. R.
Ammonia and the NOx budget of the troposphere
p 27 A82-36293

AVASTE, O.
Estimation of the temperature of the upper boundary of cloud cover over the world ocean p 54 A82-36005

AXFORD, W. I.
Cosmic ray acceleration by stellar winds. I - Total density, pressure and energy flux p 21 A82-22566

B

BABKINA, L. P.
Experience with the compilation of maps of snow-cover melting in the central part of the European USSR on the basis of satellite data p 62 A82-35134

BADHWAR, G.
Field size, length, and width distributions based on LACIE ground truth data p 8 A82-32909

BAINS, S. P. S.
Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

BALICK, L. K.
Appearance of irregular tree canopies in nighttime high-resolution thermal infrared imagery
p 68 A82-32916

BALLANI, L.
Establishing geodetic-geodynamic parameters using lunar laser range measurements p 34 A82-33293

BARABANOVA, N. G.
Evaluation of the effectiveness of systematic image distortion compensation p 69 A82-34469

BARBE, A.
Application of infrared techniques to the study of atmospheric ozone p 27 A82-36414

BARNES, J. C.
The application of Heat Capacity Mapping Mission (HCMM) thermal data to snow hydrology
[E82-10191] p 62 N82-22625

BARR, S.
Meteorological analysis of the eruption of Soufriere in April 1979 p 24 A82-33655
Skirt clouds associated with the Soufriere eruption of 17 April 1979 p 24 A82-33656

BARRACLOUGH, D. R.
Spherical harmonic representation of the main geomagnetic field for world charting and investigations of some fundamental problems of physics and geophysics
[E82-10203] p 72 N82-23576

BARTON, J. C.
Measurement of cosmogenic nuclides using a multi-crystal gamma-ray coincidence spectrometer
p 64 A82-22577

BASHER, R. E.
Sensitivity of Dobson total ozone estimations to wavelength band calibration uncertainties
p 27 A82-36405
Optical stop and focussing effects in the Dobson instrument p 28 A82-36428

BAUER, M. E.
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623
Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566
Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585
Multistage classification of multispectral Earth observational data: The design approach
[E82-10213] p 72 N82-23586
Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588
Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry
[E82-10227] p 14 N82-23600
Linear polarization of light by two wheat canopies measured at many view angles
[E82-10229] p 14 N82-23602
Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610
Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742

BAUM, W. A.
Subtleties in the flat-fielding of charge-coupled device /CCD/ images p 68 A82-32581

BAUMGARDNER, R. W., JR.
Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896
BAZILEVSKAIA, G. A.
On the physical sense of the constant of solar cosmic ray coronal propagation p 83 A82-22599
The influence of the sector structure of interplanetary magnetic field on the solar cosmic ray characteristics p 83 A82-22603
BELIAVSKII, A. I.
Remote sensing of the weediness of crop fields p 5 A82-29435
BENDER, P. L.
Establishment of terrestrial reference frames by new observational techniques p 33 A82-32078
BENDURA, R. J.
In situ ozone data for comparison with laser absorption remote sensor: 1980 PEPE/NEROS program [NASA-TM-84471] p 30 N82-25661
BENTLEY, C. R.
Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10308] p 37 N82-24582
Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data [E82-10309] p 37 N82-24583
BENTON, E. R.
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10198] p 35 N82-23571
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10310] p 37 N82-24584
Investigation of geomagnetic field forecasting and fluid dynamics of the core [E82-10342] p 39 N82-25604
BERLIN, G. L.
Possible fault detection in Cottonball Basin, California An application of radar remote sensing p 41 A82-32898
BERNARD, R.
C-band radar for determining surface soil moisture p 10 A82-37194
BERNSTEIN, R. L.
Seasat altimeter determination of ocean current variability p 50 A82-29613
BESSELING, J. F.
Nonlinear theory for elastic beams and rods and its finite element representation [WTHD-143] p 73 N82-24517

Improved definition of crustal magnetic anomalies for MAGSAT data
[E82-10314] p 37 N82-24587

Pittsburg Univ., Pa.

A color-ratio map of Mercury p 31 A82-22294

Planetary Science Inst., Pasadena, Calif.

Seasat wind and wave observations of northeast Pacific hurricane Iva, August 13, 1978 p 52 A82-29624

Purdue Univ., Lafayette, Ind.

Verification of the crustal component in satellite magnetic data p 32 A82-30789

A satellite magnetic model of northeastern South American aulacogens p 33 A82-30795

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10189] p 10 N82-22623

Study of gravity and magnetic anomalies using MAGSAT data
[E82-10194] p 35 N82-22628

Diurnal changes in reflectance factor due to Sun-row direction interactions
[E82-10128] p 11 N82-23566

Spectral properties of agricultural crops and soils measured from space, aerial, field, and laboratory sensors
[E82-10212] p 12 N82-23585

Multistage classification of multispectral Earth observational data: The design approach
[E82-10213] p 72 N82-23586

Determination of the optimal level for combining area and yield estimates
[E82-10215] p 12 N82-23588

Application of Computer Axial Tomography (CAT) to measuring crop canopy geometry
[E82-10227] p 14 N82-23600

Linear polarization of light by two wheat canopies measured at many view angles
[E82-10229] p 14 N82-23602

A model of plant canopy polarization
[E82-10233] p 15 N82-23606

Canopy reflectance as influenced by solar illumination angle
[E82-10237] p 15 N82-23610

Spherical-Earth gravity and magnetic anomaly modeling by Gauss-Legendre quadrature integration
[E82-10242] p 36 N82-24520

Magnetic and gravity anomalies in the Americas
[E82-10312] p 37 N82-24586

Aeromagnetic and satellite magnetic anomaly mapping
[E82-10339] p 39 N82-25601

Forest Resource Information System. Phase 3: System transfer report
[E82-10344] p 18 N82-25606

Spectral estimates of solar radiation intercepted by corn canopies
[E82-10003] p 18 N82-26742

Key Issues in the Analysis of Remote Sensing Data: A report on the workshop
[E82-10348] p 85 N82-26746

Q

QEB, Inc., Lakewood, Colo.

Airborne gamma-ray spectrometer and magnetometer survey, Toronto quadrangle New York, volume 2A
[DE81-027158] p 46 N82-25620

Airborne gamma-ray spectrometer and magnetometer survey, Kingston quadrangle New York, volume 2C
[DE81-027161] p 46 N82-25621

Airborne gamma-ray spectrometer and magnetometer survey, Rochester quadrangle New York, volume 2D
[DE81-027156] p 46 N82-25622

R

Remote Sensing Systems, Sausalito, Calif.

The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616

The relationship between wind vector and normalized radar cross section used to derive Seasat-A Satellite Scatterometer winds p 51 A82-29617

Evaluation of atmospheric attenuation from SMMR brightness temperature for the Seasat satellite scatterometer p 51 A82-29618

Intercomparison of wind speeds inferred by the SASS, altimeter, and SMMR p 52 A82-29621

The effect of sea-surface Sun glitter on microwave radiometer measurements
[NASA-CR-169083] p 57 N82-26525

Research Inst. of National Defence, Linkoeping (Sweden).

Study visit to United States laser technology centers, 1981
[FOA-C-30257-E1] p 81 N82-24489

S

Sanders Associates, Inc., Nashua, N. H.

High spectral resolution airborne spectrometry
p 77 A82-32443

Santa Barbara Research Center, Goleta, Calif.

Thematic mapper - An overview of spectral band registration p 77 A82-32447

Sao Paulo Univ. (Brazil).

Structure, composition and thermal state of the crust in Brazil
[E82-10187] p 35 N82-22621

Science and Education Administration, Weslaco, Tex.

AgRISTARS: Early warning and crop condition assessment. Plant cover, soil temperature, freeze, water stress, and evapotranspiration conditions
[E82-10225] p 14 N82-23598

Scripps Institution of Oceanography, La Jolla, Calif.

Satellite observations in FRONTS 80
[AD-A111080] p 58 N82-26766

Fluid-sediment interactions on beaches and shelves
[AD-A110838] p 59 N82-26948

South Carolina Univ., Columbia.

Detecting residential land-use development at the urban fringe p 22 A82-29332

South Dakota State Univ., Brookings.

Evaluation of HCMM data for assessing soil moisture and water table depth
[E82-10329] p 18 N82-24602

Irrigation management with remote sensing
[E82-10357] p 20 N82-26755

Stanford Univ., Calif.

The observation of ocean surface phenomena using imagery from the Seasat synthetic aperture radar - An assessment p 52 A82-29623

Survey of India, Dehra Dun.

Report of MAGSAT project by Survey of India
[E82-10293] p 73 N82-24570

Analysis of MAGSAT data of the Indian region
[E82-10358] p 75 N82-26756

Systems and Applied Sciences Corp., Riverdale, Md.

Retrieval of ocean surface and atmospheric parameters from multichannel microwave radiometric measurements
p 53 A82-31995

T

Technical Univ. of Denmark, Lyngby.

Movement of ice markers measured by satellite ranging
[R-240] p 59 N82-27816

Technicolor Graphic Services, Inc., Sioux Falls, S. Dak.

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10316] p 38 N82-24589

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10317] p 38 N82-24590

An investigation of MAGSAT and complementary data emphasizing precambrian shields and adjacent areas of West Africa and South America
[E82-10318] p 38 N82-24591

Technische Hogeschool, Delft (Netherlands).

Nonlinear theory for elastic beams and rods and its finite element representation
[WTHD-143] p 73 N82-24517

Tennessee Valley Authority, Chattanooga.

Remote sensing of sulfur dioxide effects on vegetation. Volume 1: Summary
[DE82-900580] p 31 N82-27802

Remote sensing of sulfur dioxide effects on vegetation. Volume 2: Data
[DE82-900581] p 31 N82-27803

Texas A&M Univ., College Station.

Orbiting passive microwave sensor simulation applied to soil moisture estimation
[E82-10343] p 18 N82-25605

Multispectral determination of soil moisture-2
[E82-10349] p 19 N82-26747

Measurement of soil moisture trends with airborne scatterometers
[E82-10361] p 20 N82-26759

Multifrequency remote sensing of soil moisture
[E82-10362] p 20 N82-26760

Development of visible/infrared/microwave agriculture classification and biomass estimation algorithms
[E82-10363] p 20 N82-26761

Texas Univ. at Austin.

Interpretation of surface-water circulation, Aransas Pass, Texas, using Landsat imagery p 60 A82-32896

Texas Univ. at Dallas.

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10226] p 73 N82-23599

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10232] p 73 N82-23605

Texas Univ. at Dallas, Richardson.

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10195] p 71 N82-22629

Investigation of the effects of external current systems on the MAGSAT data utilizing grid cell modeling techniques
[E82-10306] p 74 N82-24580

Texas Univ. at El Paso.

Characterization of the structure and tectonic of South America
[E82-10196] p 42 N82-23569

The crustal structure and tectonics of South America
[E82-10319] p 38 N82-24592

Geotectonics of South America
[E82-10320] p 38 N82-24593

Texas Univ., Austin.

The Seasat altimeter data and its accuracy assessment p 49 A82-29602

An empirical determination of the effects of sea state bias on Seasat altimetry p 50 A82-29607

Evaluation of the Seasat altimeter time tag bias
p 50 A82-29610

Texas Univ., El Paso.

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidido, and Emory Peak quadrangles, Texas, volume 1
[DE82-005554] p 47 N82-27808

Evaluation and combined geophysical interpretations of NURE and related geoscience data in the Van Horn, Pecos, Marfa, Fort Stockton, Presidio, and Emory Peak quadrangels, Texas
[DE82-005560] p 48 N82-27809

Tokyo Univ. (Japan).

Investigation from Japanese MAGSAT team
[E82-10239] p 73 N82-23612

Investigation from Japanese MAGSAT Team. Part A. Crustal structure near Japan and in Antarctic station. Part B. Electric currents and hydromagnetic waves in the ionosphere and the magnetosphere
[E82-10244] p 36 N82-24522

Report of investigation from Japanese MAGSAT Team
[E82-10322] p 74 N82-24595

U

University of Southern California, Los Angeles.

Image understanding research
[AD-A110746] p 74 N82-25611

Utah Univ., Salt Lake City.

Identifying environmental features for land management decisions
[E82-10289] p 30 N82-24567

Inventory of wetlands and agricultural land cover in the upper Sevier River Basin, Utah
[E82-10345] p 18 N82-25607

Mapping of wildlife habitat in Farmington Bay, Utah
[E82-10354] p 19 N82-26752

Detection of variations in aspen forest habitat from LANDSAT digital data: Bear River Range, Utah
[E82-10355] p 19 N82-26753

Irrigated acreage in the Bear River Basin as of the 1975 growing season
[E82-10356] p 20 N82-26754

V

Visidyne, Inc., Woburn, Mass.

Atmospheric ozone determination by solar occultation using the UV spectrometer on the Solar Maximum Mission p 27 A82-36362

W

Washington Univ., Seattle.

The Seasat-A satellite scatterometer - The geophysical evaluation of remotely sensed wind vectors over the ocean p 51 A82-29616

Surface wind analyses for Seasat p 51 A82-29619

Washington Univ., St. Louis, Mo.

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10200] p 36 N82-23573

Structure of the St. Francois Mountains and surrounding lead belt, S. E. Missouri: Inferences from thermal IR and other data sets
[E82-10205] p 11 N82-23578

Structure of the Saint Francois Mountains and surrounding lead belt, S.E. Missouri: Inference from thermal IR and other data sets
[E82-10350] p 39 N82-26748

Western Geophysical Co. of America, Houston, Tex.

Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 1
[DE82-001031] p 43 N82-23621

Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadrangle, Alaska, volume 1
[DE82-000334] p 43 N82-23623

Airborne gamma-ray spectrometer and magnetometer survey. Wainwright quadrangle, Alaska, volume 2
[DE82-000341] p 43 N82-23624

Airborne gamma-ray spectrometer and magnetometer survey, Kenora quadrangle, Minnesota, volume 1
[DE82-001029] p 43 N82-23625

Airborne gamma-ray spectrometer and magnetometer survey. Meade River quadrangle, Alaska, volume 2
[DE82-000340] p 43 N82-23626

Airborne gamma-ray spectrometer and magnetometer survey. Teshekpuk quadrangle, Alaska, volume 2
[DE82-000310] p 43 N82-23627

Airborne gamma-ray spectrometer and magnetometer survey. Harrison Bay quadrangle, Alaska, volume 2
[DE82-000315] p 43 N82-23628

Airborne gamma-ray spectrometer and magnetometer survey: Beechey Pt., quadrangle, Alaska, volume 2
[DE82-000309] p 43 N82-23629

Airborne gamma-ray spectrometer and magnetometer survey. Point Lay quadrangle, Alaska, volume 2
[DE82-000308] p 43 N82-23630

Airborne gamma-ray spectrometer and magnetometer survey. Utukok River quadrangle, Alaska, volume 2
[DE82-000316] p 44 N82-23631

Airborne gamma-ray spectrometer and magnetometer survey. Segavanirktok quadrangle, Alaska, volume 2
[DE82-000311] p 44 N82-23632

Airborne gamma-ray spectrometer and magnetometer survey: Duluth quadrangle, Minnesota, volume 2
[DE82-001027] p 44 N82-23633

Airborne gamma-ray spectrometer and magnetometer survey. Roseau quadrangle, Minnesota, volume 2
[DE82-001025] p 44 N82-23634

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 1
[DE82-004161] p 44 N82-23635

Airborne gamma-ray spectrometer and magnetometer survey. Devil's Lake quadrangle, North Dakota, volume 2
[DE82-004168] p 44 N82-23636

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 1
[DE82-001032] p 44 N82-23637

Airborne gamma-ray spectrometer and magnetometer survey. Bemidji quadrangle, Minnesota, volume 2
[DE82-001026] p 44 N82-23638

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 1
[DE82-004159] p 44 N82-23639

Airborne gamma-ray spectrometer and magnetometer survey. Hibbing quadrangle, Minnesota, volume 2
[DE82-004165] p 45 N82-23640

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 1
[DE82-004152] p 45 N82-23641

Airborne gamma-ray spectrometer and magnetometer survey. Aberdeen quadrangle, South Dakota, volume 2
[DE82-004164] p 45 N82-23642

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 1
[DE82-004151] p 45 N82-23643

Airborne gamma-ray spectrometer and magnetometer survey. International Falls quadrangle, Minnesota, volume 2
[DE82-004166] p 45 N82-23644

Airborne gamma-ray spectrometer and magnetometer survey. Barrow quadranagle, Alaska, volume 2
[DE82-000342] p 46 N82-25623

Airborne gamma-ray spectrometer and magnetometer survey. Lookout Ridge quadrangle, Alaska, volume 2
[DE82-000313] p 47 N82-25625

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 1
[DE82-005542] p 47 N82-27804

Airborne gamma-ray spectrometer and magnetometer survey: North/south tieline, volume 2
[DE82-005570] p 47 N82-27805

Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 1
[DE82-005533] p 47 N82-27806

Airborne gamma-ray spectrometer and magnetometer survey: Sioux Falls quadrangle, South Dakota, volume 2
[DE82-005574] p 47 N82-27807

Airborne gamma-ray spectrometer and magnetometer survey: Ukiah quadrangle, California, volume 1
[DE82-005541] p 48 N82-27813

Airborne gamma-ray spectrometer and magnetometer survey: Huron Quadrangle, South Dakota
[DE82-005540] p 48 N82-27814

Airborne gamma-ray spectrometer and magnetometer survey: Chico Quadrangle, California
[DE82-005543] p 48 N82-27815

Wisconsin Univ., Madison.

Magsat magnetic anomalies over Antarctica and the surrounding oceans p 32 A82-30787

The impact of meteorological satellites on the First GARP Global Experiment (FGGE) p 55 N82-23852

Estimates of sea surface stress for summer MONEX from cloud motions p 56 N82-23910

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10308] p 37 N82-24582

Investigation of Antarctic crust and upper mantle using MAGSAT and other geophysical data
[E82-10309] p 37 N82-24583

Woods Hole Oceanographic Institution, Mass.

Computer-processed geophysical atlas of digital data for the East Coast margin of the United States from surface and spacecraft data
[AD-A111388] p 39 N82-25746

Wyle Labs., Inc., Hampton, Va.

Airborne lidar measurements of the Soufriere eruption of 17 April 1979 p 24 A82-33657

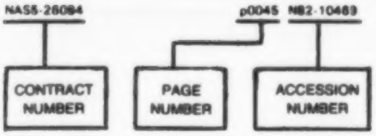
Z

Zentralstelle fuer Geo-Photogrammetrie und Fernerkundung, Munich (West Germany).

Multidisciplinary investigations on HCMM data over middle Europe and Marocco
[E82-10315] p 74 N82-24588

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the AIAA accession numbers appearing first. The accession number denotes the number by which the citation is identified in the abstract section. Preceding the accession number is the page number on which the citation may be found.

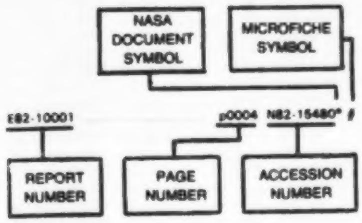
REPORT/ACCESSION NUMBER INDEX

Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The page number indicates the page on which the citation is located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

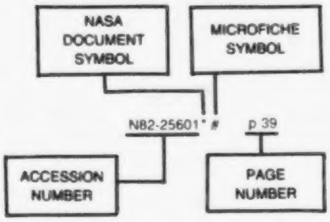
ACCESSION NUMBER INDEX

EARTH RESOURCES / *A Continuing Bibliography (Issue 35)* OCTOBER 1982

Typical Accession Number Index Listing



Listings in this index are arranged alphanumerically by accession number. The page number listed to the right indicates the page on which the citation is located. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

1. Report No. NASA SP-7041(35)	2. Government Accession No.	3. Recipient's Catalog No.
4. Title and Subtitle EARTH RESOURCES A Continuing Bibliography (Issue 35)		5. Report Date October 1982
		6. Performing Organization Code
7. Author(s)		8. Performing Organization Report No.
9. Performing Organization Name and Address National Aeronautics and Space Administration Washington, D.C. 20546		10. Work Unit No.
		11. Contract or Grant No.
12. Sponsoring Agency Name and Address		13. Type of Report and Period Covered
		14. Sponsoring Agency Code
15. Supplementary Notes		

16. Abstract

This bibliography list 587 reports, articles, and other documents introduced into the NASA Scientific and Technical Information System between July 1, and September 30, 1982. Emphasis is placed on the use of remote sensing and geophysical instrumentation in spacecraft and aircraft to survey and inventory natural resources and urban areas. Subject matter is grouped according to agriculture and forestry, environmental changes and cultural resources, geodesy and cartography, geology and mineral resources, hydrology and water management, data processing and distribution systems, instrumentation and sensors, and economic analysis.

17. Key Words (Suggested by Author(s)) Bibliographies Earth Resources Remote Sensors	18. Distribution Statement Unclassified - Unlimited		
19. Security Classif. (of this report) Unclassified	20. Security Classif. (of this page) Unclassified	21. No. of Pages 164	22. Price* $10.50 HC

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an '*' following the accession number) are also received by the following public and free libraries

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library
NEW YORK

Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.
